## 행사개요

행사명	2023 사이언스파크 이노페어
기간	2023년 6월 14일(수)~16일(금) / 3일간
장소	경주 화백컨벤션센터
주제	디지털 시대의 산업과 더 나은 삶을 위한 기술
주최	경상북도, 대구광역시, (사)아시아사이언스파크협회
주관	ASPA 본부사무국
홈페이지	www.spif2023.com

## Overview

Title	SCIENCEPARK INNOFAIR 2023
Date	June 14. (Wed) – 16. (Fri), 2023
Venue	HICO, Gyeongju, Republic of Korea
Theme	Industry in the Digital Age and Technology for a Better Life
Hosted by	Gyeongsangbuk-do, Daegu Metropolitan City, Asian Science Park Association (ASPA)
Organized by	Asian Science Park Association Secretariat
Website	www.spif2023.com

# Contents

06	<b>Program at a Glance</b> 프로그램
08	<b>Welcome Message</b> 환영사
11	<b>Keynote Speech</b> 기조강연 Steps towards Artificial General Intelligence: Risks and Opportunities 범용 인공지능 시대의 기회와 리스크 <b>Speaker</b> Dr. Dae-Shik Kim (KAIST, Neuroscientist) <b>발표자</b> 김대식 교수 (카이스트, 뇌과학자)

291	<b>Sciencepark Forum 2</b> (Collaboration between Innovative Institutions and Enterprises - Gyeongbuk TP Session) 사이언스파크 포럼 2 (혁신 기관 · 기업 상생 협력 - 경북TP 세션) Global Cooperation between Industry, Academies, Research Institutes and Governments in the Region 지역내 산학연관의 글로벌 협력

## 프로그램

일 자		장 소	프로그램
1일차 6월14일 (수)	15:00~16:00	HICO 3층 300A	개회식, 기조강연
	16:10~17:30		리더스 라운드테이블 미팅
	16:10~17:10	HICO 2층 201~204	마스터클래스 1
	17:20~18:20		마스터클래스 2
	10:00~17:00	HICO 2층 101~104	기술 · 비즈니스 상담회
	14:00~18:00	HICO 2층 205	2023 혁신클러스터학회 하계 학술대회 (특별세션)
	18:30~20:00	HICO 3층 300A	공식만찬

2일차 6월15일 (목)	10:00~11:30	HICO 2층 201~204	사이언스파크 포럼 1
	11:30~13:00		사이언스파크 포럼 2 (경북TP세션)
	13:00~14:00		중식
	14:00~15:00	HICO 2층 201~204	마스터 클래스 3
	15:10~16:10		마스터 클래스 4
	10:00~17:00	HICO 1층 101~104	기술 · 비즈니스 상담회
	18:00~20:00	경주 일원	만찬 (해외 참가자 대상)

3일차 6월16일 (금)	08:30~18:00	포스코, 체인지업 그라운드 포항 및 경주 일원	산업시찰, 문화시찰 (해외 사전 신청자에 한함)
---------------------	-------------	---------------------------------	-------------------------------

## Program at a Glance

Date		Venue	Program
Day 1 June 14 (Wed)	15:00~16:00	3F HICO 300A	Opening Ceremony / Keynote Speech
	16:10~17:30		Leaders Round Table Meeting
	16:10~17:10	2F HICO 201~204	Master Class 1
	17:20~18:20		Master Class 2
	10:00~17:00	1F HICO 101~104	Technology · Business Meeting
	14:00~18:00	2F HICO 205	IIC 2023 Summer Conference (Special Session)
	18:30~20:00	3F HICO 300A	Welcome Dinner

Day 2 June 15 (Thu)	10:00~11:30	2F HICO 201~204	Sciencepark Forum 1
	11:30~13:00		Sciencepark Forum 2 (Gyeongbuk TP Session)
	13:00~14:00		Lunch
	14:00~15:00	2F HICO 201~204	Master Class 3
	15:10~16:10		Master Class 4
	10:00~17:00	1F HICO 101~104	Technology · Business Meeting
	18:00~20:00	Gyeongju	Gala Dinner (International Participants Only)

Day 3 June 16 (Fri)	08:30~18:00	POSCO, Change Up Ground and Gyeongju	Technical Tour / Cultural Tour (Pre-registered International Participants only)

## 환영사

2023년 6월 14일부터 16일까지 경주 화백컨벤션 센터에서 개최되는 2023 사이언스파크 이노페어에 여러분을 초대합니다.

2021년도에 이어 2회째 개최되는 사이언스파크 이노페어는 사이언스파크 및 유관기관, 기업, 대학 등 지역 혁신을 선도하는 국내외 혁신 주체들 간의 진지한 논의와 실질적 협력을 모색하기 위해 ASPA 본부 사무국에서 주관하는 행사입니다.

올해 사이언스파크 이노페어는 "디지털 시대의 산업과 더 나은 삶을 위한 기술"을 주제로 오는 6월 14일~16일까지 경주에서 개최됩니다.

본 행사에서는 사이언스파크 간 국제협력 사례와 사이언스파크 개발 과정에서 직면하는 기업육성 정책, 기술개발 지원, 조직 발전 및 혁신역량 강화 등의 이슈를 논의할 수 있는 사이언스파크 포럼과 세계 각국의 사이언스파크에서 육성된 중소벤처기업이 참여하는 비즈니스 상담회, 마스터클래스 등 다양한 세션이 진행됩니다.

ASPA는 '지역 대 지역'의 교류협력을 통해 상호 이해와 공동체 의식을 강화해 나가는 것을 추구하고 있습니다.

이번 행사를 통해 지역의 다양한 혁신주체들이 사이언스파크를 중심으로 실질적으로 협력하고 상호 발전할 수 있는 것을 찾고, 이를 통해 각 지역 모두가 함께 발전해 나갈 수 있기를 기원합니다.

2023 사이언스파크 이노페어에 많은 관심과 지원을 부탁드립니다.

감사합니다.

Yeong Junaq Wang

Chair, Organizing Committee of  
SCIENCEPARK INNOFAIR 2023

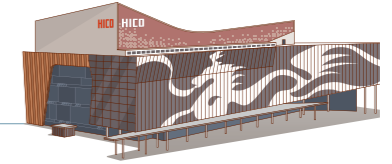

President, Asian Science Park  
Association (ASPA)

Director General, Hsinchu Science  
Park Bureau, Ministry of  
Science and Technology

*Wayne Wang*

## Welcome Message

We cordially invite you to the 2nd SCIENCEPARK INNOFAIR 2023 which will be held in Hwabaek International Convention Center, Gyeongju, Korea from June 14 to 16, 2023.

SCIENCEPARK INNOFAIR, which was held for the first time in 2021, is a new regional cooperation activity of ASPA. It is our pleasure to gather together innovation leading subjects, such as Science & Technology Parks (STPs) and related organization, universities and venture enterprises from all parts of the world to have in-depth discussions and practical cooperation through the event. SCIENCEPARK INNOFAIR 2023 under the theme of 'Industry in the digital era and Technologies for a better life' consists of various programs such as LEADERS Round Table Meeting, Sciencepark Forum, Master Class, Business Meeting, etc. During the event, experts from STPs will exchange their view on the practice of international cooperation between each other, policy of nurturing local companies, support for technology and organizational development, and ways to strengthen innovation capabilities. Also, outstanding venture companies will be provided with opportunities of participating in Technology·Business Meeting for the technology exchange with international buyers who have common business interests and mutually beneficial products. ASPA is seeking ways to strengthen mutual understanding and a sense of community through exchange and cooperation among regions. We hope participants take advantage of SPIF 2023 via open discussion, practical schemes centered on a lot of innovation subjects to enhance cooperation. I appreciate for your attention and support on SPIF 2023.

## BIOGRAPHY

### Education

- » 1987 ~ 1992 Darmstadt University of Technology, Bachelor of Science in Psychology
- » 1991 ~ 1992 Master of Science in Brain Science, Max Planck Institute of Brain Research
- » 1992 ~ 1994 Doctor of Brain Science, Max Planck Institute of Brain Research

### Career

- » 1999 ~ 2003 Postdoctoral researcher at Massachusetts Institute of Technology in the United States  
Researcher at Riken, Institute of Physical and Chemical Research  
Assistant Professor of Magnetic Resonance Research Center, University of Minnesota Medical School, USA
- » 2003 ~ 2009 Boston University in the United State
- » 2009 ~ Professor of Electronics and Electrical Engineering, KAIST University of Information Science and Technology
- » 2011 ~ 2012.5 Vice President of Electrical and Electrical Engineering, KAIST University of Information Science and Technology
- » 2011 ~ Director, Kolon KAIST Lifestyle Innovation Center
- » 2015.3 ~ Science Management Committee Member of GunMyungWon

### Research Performance

- » "Global and Local fMRI Signals Driven by Neurons Defined Optogenetically by Type and Wiring" Nature, 465(7299), (2010)
- » "High-resolution Mapping of Iso-orientation Columns by fMRI" Nature Neuroscience, 3(2), 164-169, (2000)
- » "Reverse Occlusion Leads to a Precise Restoration of Orientation Preference Maps in Visual Cortex" Nature, 370(6488), 370-372, (1994)

## Abstract

### "Steps towards Artificial General Intelligence: Risks and Opportunities"

Recent advances in generative AI have attracted a wide variety of interests ranging from general audiences to government representatives.

In this presentation, I will describe the major technological breakthroughs in Large Language Models (LLM) and their economic and societal implications.

Moreover, this presentation will elucidate how "emergent properties" may arise as LLMs increase in scale.

Finally, I will discuss whether current LLMs, such as GPT-4 are the harbingers of a future Artificial General Intelligence (AGI).

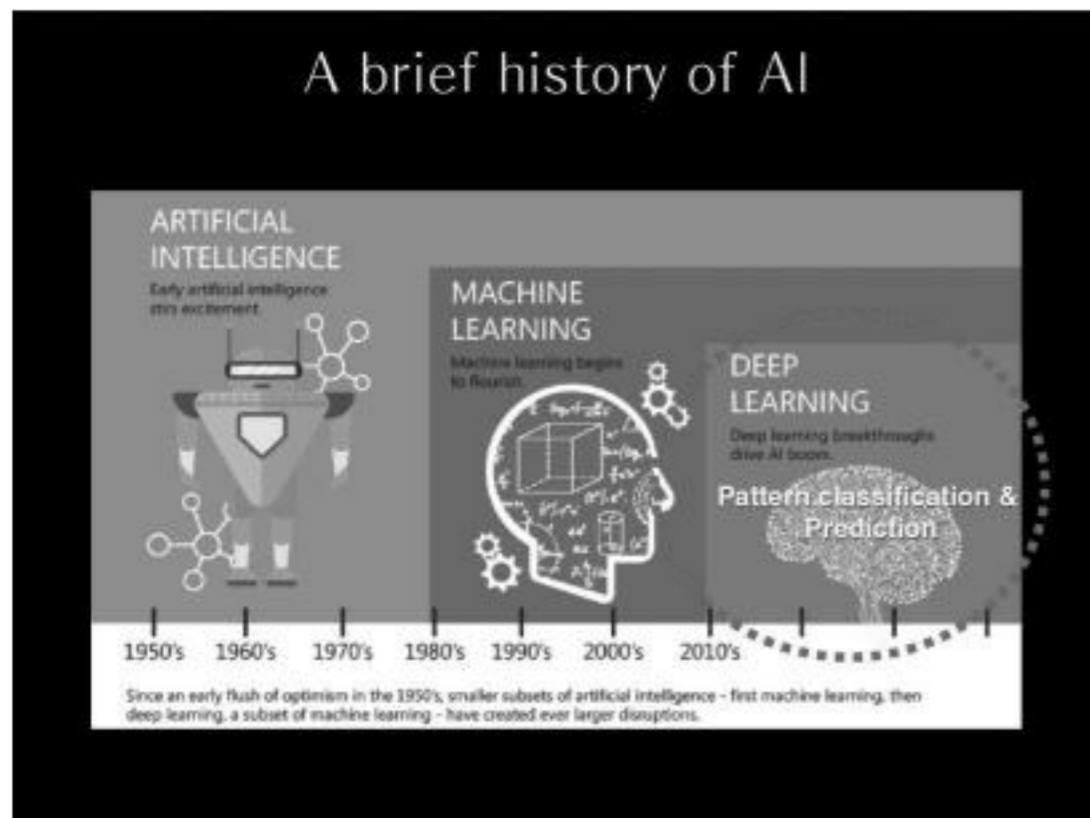

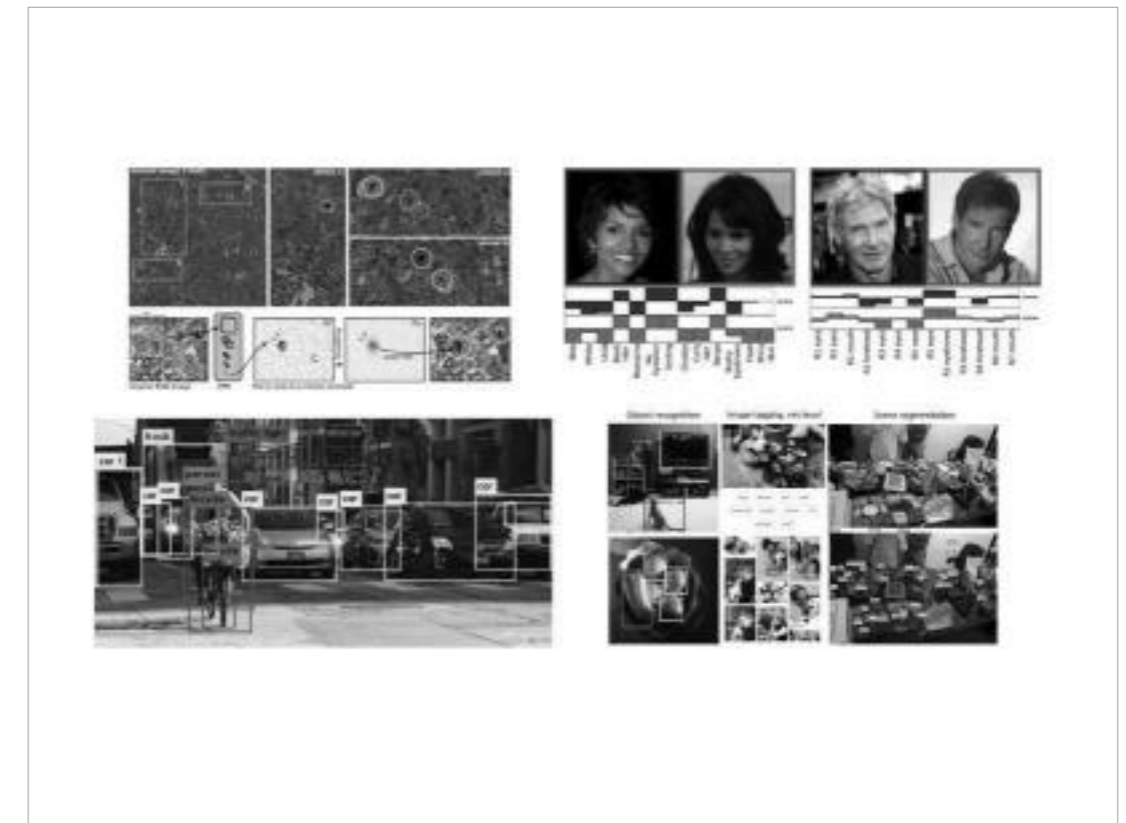

### "범용 인공지능 시대의 기회와 리스크"

최근 생성형 AI의 발전은 일반 청중부터 정부 대표에 이르기까지 다양한 관심을 불러일으키고 있다.

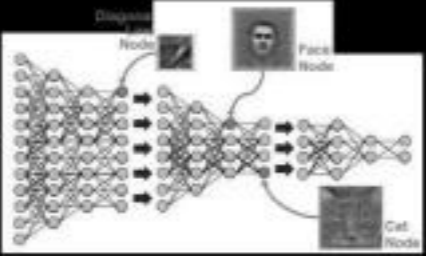

본 강연에서는 대규모 언어 모델(LLM)의 주요 기술 혁신과 그 경제적, 사회적 영향에 대해 설명한다.

또한 LLM의 규모가 커지며 발생하는 '창발적 속성'을 살펴본다.

마지막으로 GPT-4와 같은 현재의 LLM이 미래의 인공 범용 지능(AGI)의 선구자인지에 대해 논의할 것이다.

## Image vs Sentence

"Convolution"

To be, or not to be, that is the question:  
Whether 'tis nobler in the mind to suffer  
The slings and arrows of outrageous fortune,  
Or to take arms against a sea of troubles  
And by opposing end them.  
(William Shakespeare)

?????

**Introduction**

The purpose of large language models is that they can generate text that is coherent and follows the instructions.

**Training**

The training of large language models is done by feeding them a large amount of text data and letting them learn the patterns.

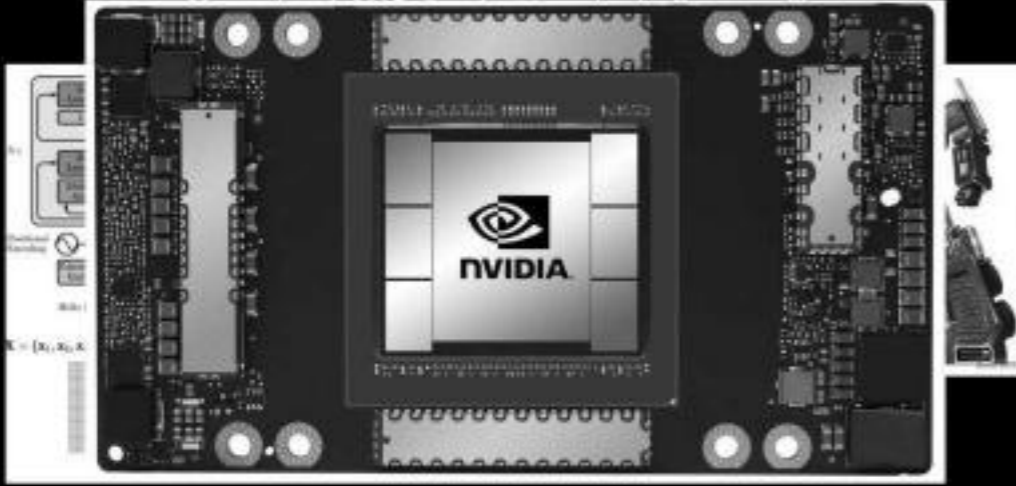

**Answer**

The purpose of large language models is that they can generate text that is coherent and follows the instructions.

**Conclusion**

The purpose of large language models is that they can generate text that is coherent and follows the instructions.

### Nizmar Mohd Nazar

Deputy CEO of Malaysia Automotive, Robotics and IoT Institute (MARii)

미래 인재를 위한 EV 및 전기 자동차 생태계 설계

Designing the EV & Electromobility Ecosystem for the Future Talent

## BIOGRAPHY

Nizmar bin Mohd. Nazar is the Deputy Chief Executive Officer (DCEO) at Malaysia Automotive, Robotics and IoT Institute (MARii) with more than 15 years of experience in Information Technology, Mobility as a Service (MaaS) & Automotive industry. Strategizing from the NAP 2020 core value to transform the Malaysia Automotive Industry moving towards Connected Mobility Ecosystem by year 2030.

Involved in the Intelligent Transportation Systems (ITS) for mobility as a service (MaaS) development under automated drive, telematics implementation, simulation & virtual/augmented reality (VR/AR) integration for Next Generation Vehicle (NxGV) development.

Lead MARii as a focal point in technology coordination center for the development of the Malaysian automotive (NxGV – Electric Vehicles (EV) & Autonomous Vehicles (AV)), IoT & Robotics deployment in all matters related to automotive industry, IoT, Robotics & Industry 4.0 technology, including formulating of the national automotive policy (NAP) and Industry4WRD policy and its expansion technology programmes, managing talent I4.0 development programme formulating and coordinating industry 4.0 and automotive related research.

Supporting the Government through NAP for the Infrastructure, Platform & Software as a Service (IaaS, PaaS & SaaS) development under Automotive Cloud Web Services development (MACWES) for services and new mobility functions enhancing the MaaS/AV & Intelligent Transportation System (ITS) making transport and travelling safer, green, more efficient & intelligence for NxGV ecosystems.

## Abstract

### Designing the EV & Electromobility Ecosystem for the Future Talent

This abstract highlights Malaysia's progressive efforts in adopting electric vehicles (EVs) and establishing a comprehensive electromobility system. The government's initiatives, such as tax exemptions and incentives, coupled with the development of charging infrastructure, have encouraged EV adoption. The country's automotive industry is also embracing EV production through partnerships and indigenous models, fostering technological advancements and job creation. Malaysia's integration of renewable energy sources further supports sustainable electromobility. Despite challenges like standardization and consumer awareness, Malaysia's collaborative approach positions it as a regional leader in EVs and electromobility, with benefits including reduced emissions, economic opportunities, and improved quality of life.

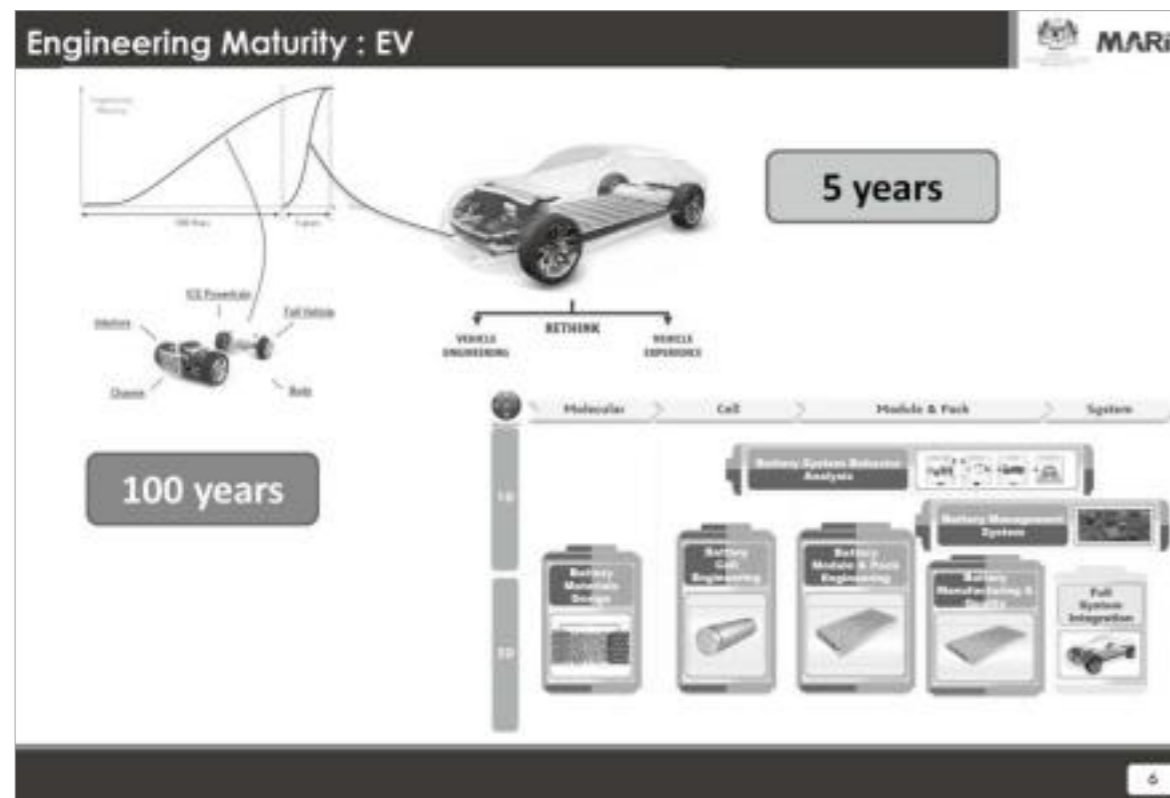

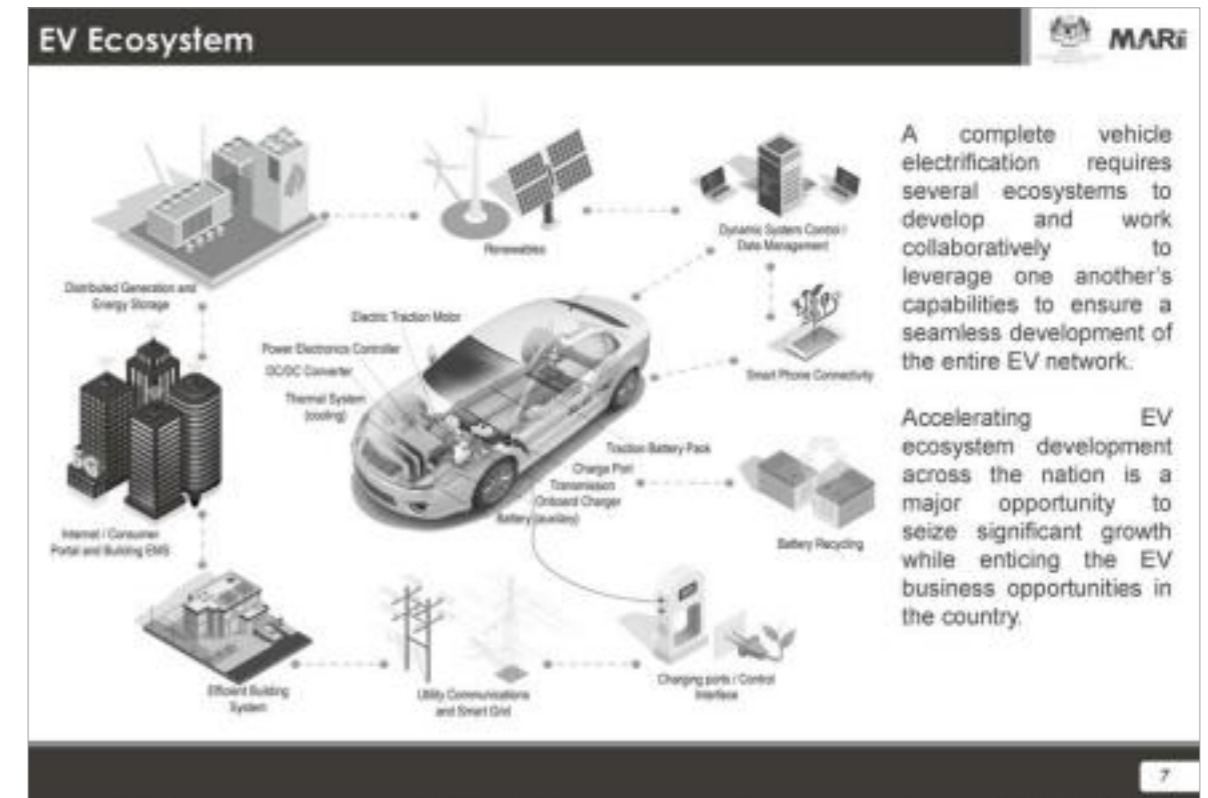

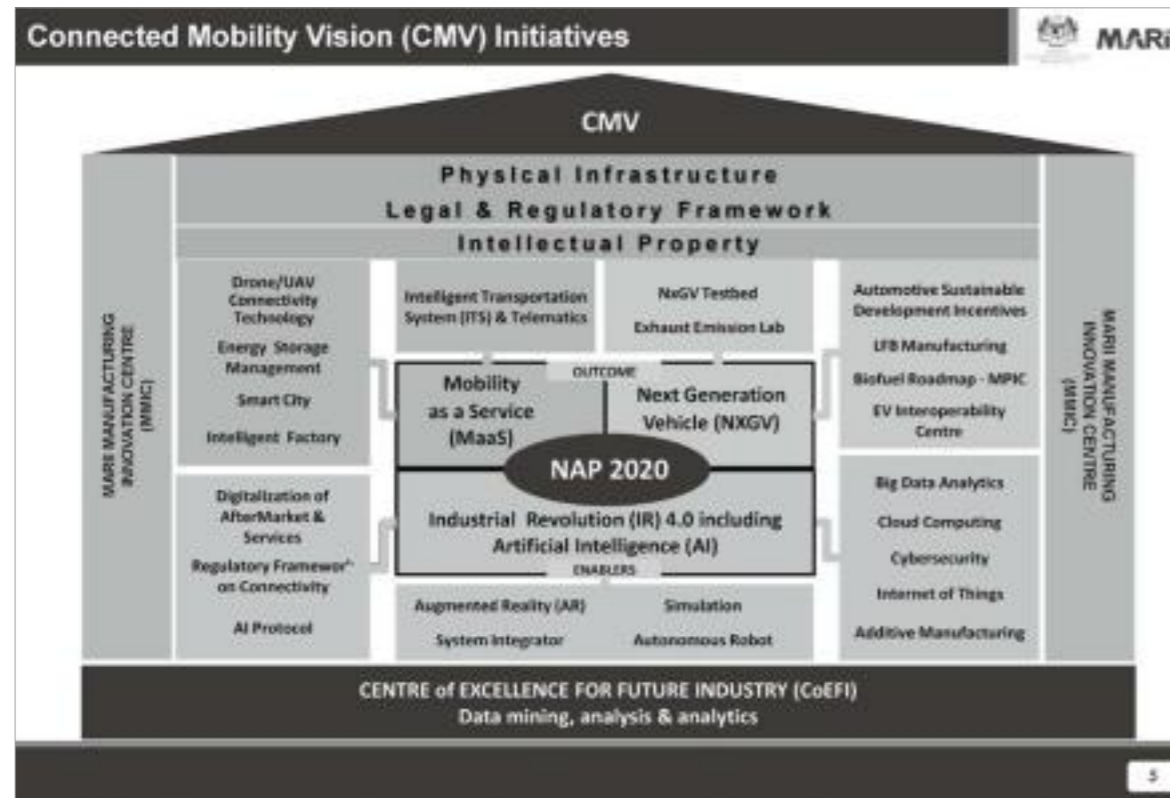

It also highlights Malaysia's government support for companies developing critical components and electronic and electrical (E&E) products related to automotive, particularly in the context of electric vehicles (EVs). Programs such as the Automotive Supplier Excellence Program (ASEP), Lean Production System Program (LPS), and Digital Engineering & Prototyping Program (DEP) by the Malaysia Automotive, Robotics and IoT Institute (MARii) have been instrumental in fostering the development of battery management systems (BMS), thermal management systems (TMS), Light Detection and Ranging (LIDAR), and Radio Detection and Ranging (RADAR) networks. These initiatives demonstrate Malaysia's commitment to encouraging local expertise and fostering innovation in the EV sector, ultimately contributing to the country's electrification efforts.

### 미래 인재를 위한 EV 및 전기 자동차 생태계 설계

전기자동차 보급을 확대 하고 포괄적인 e-모빌리티 시스템을 구축하려는 말레이시아의 진보적인 노력에 대해서 얘기하고자 합니다. 충전소 인프라 개발과 함께 세금 면제 및 인센티브와 같은 정부의 정책은 전기차 구매를 장려했습니다. 말레이시아의 자동차 산업은 또한 파트너십과 고유모델, 일자리 창출과 기술 개발을 통해 전기자동차 생산증가를 촉진하고 있습니다. 말레이시아의 재생 가능 에너지원 통합은 지속 가능한 e-모빌리티를 더욱 지원할 것입니다. 표준화 및 소비자 인식과 같은 문제에도 불구하고 말레이시아의 협력적 접근 방식은 탄소 배출 감소, 경제적 기회 및 삶의 질 향상을 포함한 이점을 통해 전기자동차 및 e-모빌리티 분야의 지역 리더로 자리매김하고 있습니다.

또한 특히 전기 자동차와 관련하여 자동차와 관련된 중요 부품 및 전자 및 전기(E&E) 제품을 개발하는 회사에 대한 말레이시아 정부의 지원을 얘기하고자 합니다. MARii(Malaysia Automotive, Robotics and IoT Institute)의 ASEP(Automotive Supplier Excellence Program), LPS(Lean Production System Program) 그리고 DEP(Digital Engineering & Prototyping Program)와 같은 프로그램은 Battery Management Systems (BMS), Thermal Management Systems (TMS), Light Detection and Ranging (LIDAR) 그리고 Radio Detection and Ranging (RADAR) networks과 같은 기술들의 개발을 촉진하는 데 중요한 역할을 했습니다. 이러한 계획은 국내 고유 기술 개발과 전기자동차 부문의 혁신을 촉진하여 궁극적으로 국가의 전기자동차 보급에 기여하려는 말레이시아의 의지를 보여줍니다.

## 1 Enhanced Supply Chain

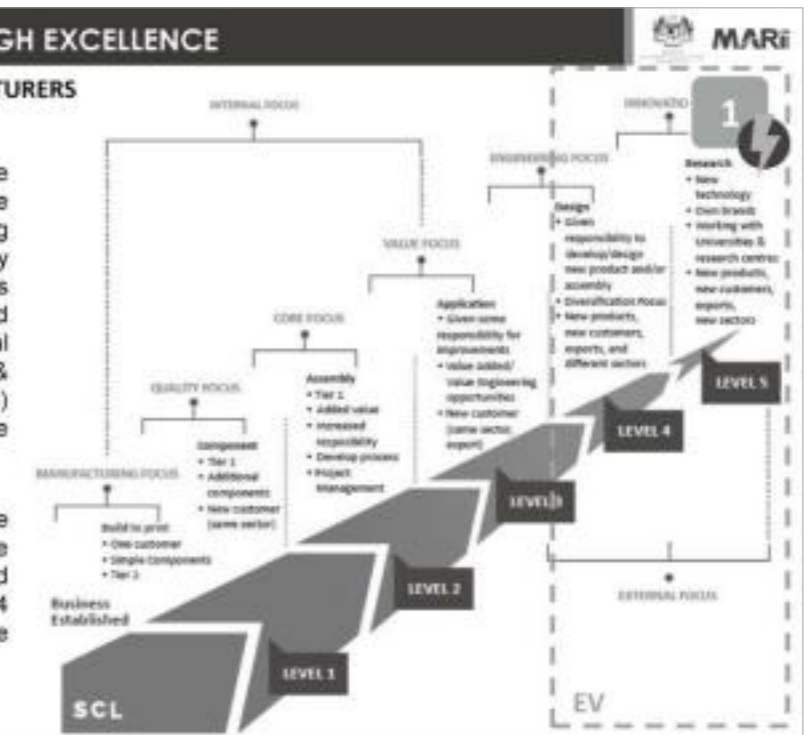

### SUSTAINABILITY THROUGH EXCELLENCE

#### DEVELOPING LOCAL MANUFACTURERS AS GLOBAL VENDORS

The action plans to achieve the world class status amongst the capable local vendors, starting with the internal focus, followed by external focus as the vendors capabilities are gradually elevated were illustrated from the National Roadmap for Automotive & Mobility Value Chain (NRAMVC) under the National Automotive Policy 2020.

The minimum requirement for the automotive manufacturers capable to produce EV parts and components starts at SCL Level 4 with the capability to design the product itself.

## Standards Development

### NATIONAL OCCUPATIONAL SKILLS STANDARDS

NOSS outlines the skills required by an employee working at a certain level of employment to achieve specific competency.

NOSS is developed by a pool of the industry expert and skilled workers in the area of performed job.

The NOSS can be used for

- Pengiktirafan Pencapaian Terdahulu (PPT)/Recognition of Prior Achievement certification for experienced manpower.
- SLDN stands for National Dual Training System is for graduates which includes actual workplace (company) of 70% to 80% practical training (performance) and 20% to 30% theoretical learning (knowledge).

## 4 NxGV FUTURE TALENTS

### Talent Development

4

#### CURRENT TALENT : LOCAL INSTITUTIONS OFFERING AUTOMOTIVE AND OTHER RELATED ENGINEERING/ SKILLS COURSES

Category	Institution	University / Polytechnics	Polytechnic and TVET Institutes	TVET Institutions	Secondary schools
Data Analyst	University				
Designer	University				
Engineer	University				
Executive	University				
Technician	Polytechnic: ADTEC, CIAST				
Skilled workers	TVET Institutions/Secondary schools				

Offering specific courses in Automotive Engineering for Degree

Offering Automotive Manufacturing, critical thinking, communication & analytical skills and math skills related subjects

Offering SKM Level 4 & above and Diploma in Automotive

Offering SKM Level 1, 2 and 3 in Automotive related discipline

Offering SPPI certification

➤ There are 58 experts in Malaysia with automotive fields of expertise that contributes towards the development of NOSS, NSC for EV charging stations and Malaysian Standards.

**전 규 태** Gyu Tae Jun

탑테크(주) 대표 / CEO of TopTech

지역사회와 함께 발전하는 탑테크

TOPTECH growing together with local communities

### BIOGRAPHY

CEO Jun Gyu Tae established Top Tech in 2008 based on Pyunghwa Valeo and small and medium-sized business experience, and has been growing as a professional technician for more than 25 years. He obtained a master's degree in automotive engineering and a master's degree in business administration, achieved steady research and development performance, and won awards such as the 2020 Small and Medium Business Excellence Award and the 2022 Minister of Small and Medium Venture Business Award for profit generation and sales growth.

'Based on the creative spirit of challenge, all executives and staff members work together to produce the highest quality products through product development and process development for customer satisfaction.

Under the management philosophies of 'corporate change', 'individual development', and 'mutual respect', we are working with the mindset of growing and developing together.

In addition, in order to help young people in the local community with field work, we are providing local students with learning opportunities by linking lectures and field trips on field work, job creation and social contribution activities.

Like this, he is still working hard to become a respected entrepreneur.

### Abstract

## TOPTECH growing together with local communities

Toptech Co., Ltd. designs, processes, and manufactures automated inspection devices with its own technology by investing in development of new technologies such as production process efficiency and automation line establishment of manufacturing production facilities, so it is growing more and more by creating profits and increasing sales through reducing manufacturing costs and improving productivity.

The main business divisions consist of the automobile parts division, the automation division, and the company-affiliated research institute.

The Automotive Division produces more than 20 types of products, including hybrid SUB ASS'Y, transmission parts DCT forks, and engine support brackets through state-of-the-art cutting processing.

The Automation Division conducts its own design, manufacture, development, and sales of auto parts inspection checker gauges and automatic/semi-automatic inspection devices.

The company-affiliated research center has secured 12 patents for core technologies and secured future food sources with a combination of industrial robot convergence systems and new convergence technologies based on various product design and automation equipment-based technologies.

In addition, to diversify new businesses, we plan to expand overseas market development as a strategy to diversify business partners and expand exports.

As an expansion plan, we are seeking cooperation with Top Tech's technology and competitiveness for local companies that feel a lack of technology and competitiveness.

By participating in joint development and continuous improvement activities with us, we will be able to increase corporate profits, improve productivity, and maximize quality stability.

In other words, we are confident that our current partner companies will apply new technologies and become the world's best technology holding company, supplementing each other's lacking parts through technology cooperation transfer.

## Abstract

## 지역사회와 함께 발전하는 탐테크

답테크㈜는 자동차부품을 주생산품목으로 성장 발전하였으며, ‘기술력이 곧 경쟁력’이라는 믿음으로 생산공정 효율화와 제조생산설비의 자동화 라인구축 등 신기술개발에 집중 투자하여 자동화 검사장치를 자체기술로 설계, 가공, 제작하기에 제조비용 절감과 생산성 향상 등을 통한 이익창출과 매출증대로 더욱 더 성장하고 있습니다.

주요 사업부로는 자동차부품사업부, 자동화사업부, 기업부설연구소로 이루어져 있습니다.

자동차사업부는 최첨단 절삭가공을 통한 하이브리드 SUB ASS'Y, 트랜스미션부품 DCT포크, 엔진 서포트 브라켓 등 20여종 이상의 제품 생산합니다.

자동차사업부는 자동차부품 검사 체커 게이지, 자동/반자동 검사장치 등 자체 설계 및 제작, 개발완료 판매를 시행하고 있습니다.

기업부설연구소는 핵심 기술에 대한 특허권 12건 확보하고, 다양한 제품 설계 및 자동화장비 기반 기술로 산업용 로봇융합시스템과 융복합 신기술 조합으로 미래 먹거리를 확보하고 있습니다..

그리고, 신사업 다각화를 위해 거래선 다변화 및 수출확대를 위한 전략으로 해외시장 개척을 확대 할 계획입니다.

확대방안으로는 기술력과 경쟁력 부족을 느끼는 현지기업에 탑테크의 기술력과 경쟁력 등의 협력을 모색하고 있습니다.

당사와 공동개발 및 지속적 개선활동 협력에 동참함으로써 기업 이윤 증가와 생산성 향상, 품질 안정 극대화를 실천 할 수 있을 것입니다.

즉, 당사의 기술협력 이전을 통해 부족한 부분을 상호보완해주며 현재 협력기업은 신기술 적용과 세계 최고 기술 보유 기업이 될 것으로 확신합니다.

## Global Marketing Strategies

Technology Collaboration and Transfer

TOPTECH

## 1. Purpose and Necessity of Technology Transfer

## 1-1 Exploring Ways for Coexistence and Mutual Growth

## 3. Expected Benefits

## 3-1 Expected Benefits of Local Companies

- Continuous adoption and maintenance of advanced technologies
- Technical education for enhanced productivity and quality assurance
- Accumulation of local technological know-how
- Acquisition of local development capabilities through collaboration
- Achievement of global customer base through strategic collaboration
- Attainment of leading position in globalization

Increase in Long-term  
Corporate Profits  
Achieving Target  
Growth over 100%

## 3-2 Expected Benefits of Toptech

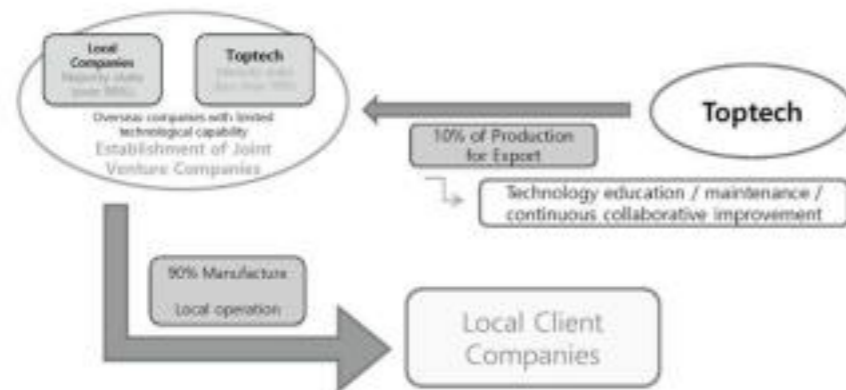

- Export performance resulting from 10% domestic production
- Maintenance of in-house technological capabilities and application of new technology development testing
- Generation of indirect profit from technological capabilities (covering long-term, small-scale technological royalties)
- Securing a stable supply of food through manufacturing and export
- 75-80% of the sales price estimated as cost
- Maintenance and activation of technical personnel (Promotion of advanced human resource development activities)
- Realization and development of approaches to establish global collaborative companies

Sustainable Growth  
of the Company

## 2. Expected Benefits

## 2-1 Implementation Methods

## a) How will the collaboration be carried out?

### 정명호 Myungho Jung

경진기계(주) 대표 / CEO of Kyung-Jin

경진의 과거, 현재, 미래  
Kyungjin's past, present and future

### BIOGRAPHY

- » **1998. 01** Joined Kyungjin
- » **2005. 01** Appointed as CEO of Kyungjin
- » **2019. 03** Keimyung University Graduate School of Intelligent Automotive Engineering (Master's degree)

### Abstract

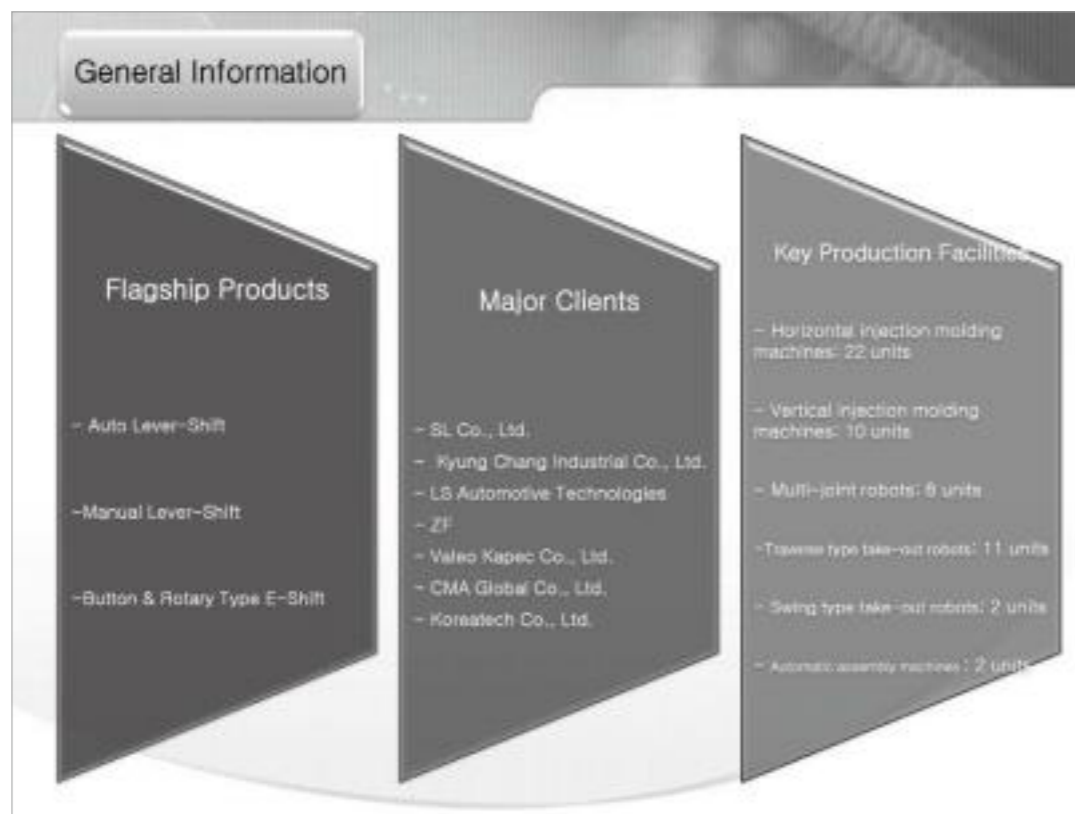

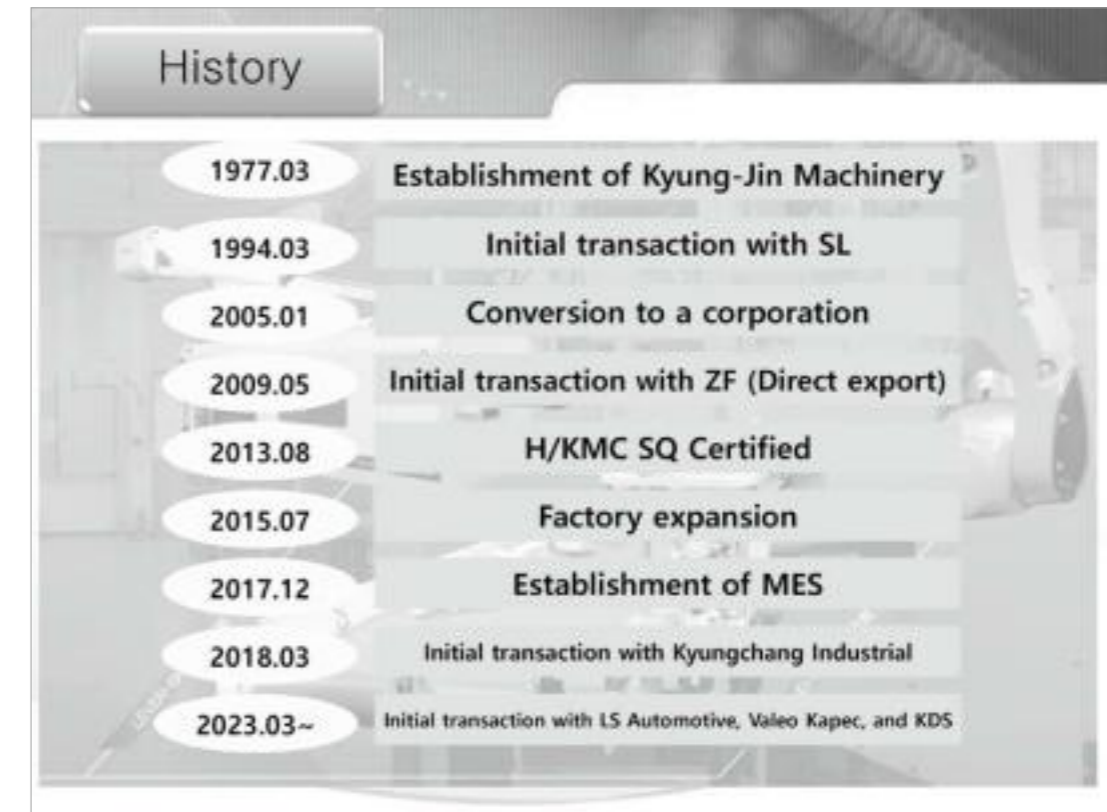

## Kyungjin's past, present and future

Kyungjin is a secondary partner of Hyundai-Kia Motors, which mainly produces Auto & Manual Lever-Shift and Button & Rotary Type E-Shift for vehicles. In addition to the product introduction of Kyungjin, we will introduce examples of innovation in manufacturing technology compared to the past production methods of injection and assembly processes, and introduce the direction for future growth of Kyungjin.

## 경진의 과거, 현재, 미래

경진기계는 차량용 Auto & Manual Lever-Shift, Button & Rotary Type E-Shift를 주요 생산 품목으로하는, 현대기아차 2차 협력사이다.

경진기계의 생산제품 소개와 더불어, 사출 및 조립공정의 과거 생산 방식 대비 현재의 제조 기술 혁신사례를 소개하며, 향후 경진기계의 성장을 위한 방향을 소개하고자 한다.

## Products

BUTTON & ROTARY  
TYPE E-SHIFT

차세대 형식의 E-SHIFT로 높은 수준의 조작감과 외관 품질이 요구되는 제품으로, 가장 최신의 레버 형태입니다.

This Button typed Shifter is a kind of Electronic Shifter, which requires a high level of operation and appearance quality as one of the latest lever type of Shifter.

## Products

POWER-WINDOW  
BUTTON

높은 수준의 조작감과 외관 품질이 요구되는 제품

Products requires a high level of operation and appearance quality

## Products

## M/T LEVER-SHIFT

일반적인 Manual Transmission의 장착된 차량에 적용되는 부품으로 원활한 조작을 위한 적합한 프레스기술과 사출기술을 요구하는 부품입니다.

This Lever-Shift, being asked high stamping tech, to make it bent and hooked molding to manufacture, is connected to the Manual Transmission in general cars.

HIGH PERFORMANCE M/T  
LEVER-SHIFT

국내외 고성능 스포츠카의 Manual Transmission의 장착된 차량에 적용되는 부품으로 정밀한 조작감과 강한 견도를 낼 수 있는 프레스 기술이 요구되는 부품입니다.

We already become the unique supplier in the field for High Performance Manual Lever-Shift that using high technology to stable in dynamic operation and severe vibration in high performance cars like as SUV. Currently thanks to our technical experience, we could be a new and old supplier in world markets.

## Products

BATTERT MODULE  
BUS-BAR GUIDE

전기차 배터리 모듈간 직렬연결을 해주는 부품으로, 고내구성과 고내열성을 요하는 부품입니다.

It is a component that connects battery modules in series, that requires high durability and heat resistance.

## Products

### Lifestyle Products

As a part of business diversification, we are planning to enter the lifestyle market in addition to our automotive components, including eyeglass cases and combs.

Glasses & Contact lenses Case

BRUSH

## Master Class 2 - Smart Manufacturing Innovation

**최 광 훈** Kwanghoon Choi

(주)알엠소프트 대표 / CEO of RMSOFT

아카이브 시스템과 오토스토어  
Archive system and Autostore

### BIOGRAPHY

Choi Kwang Hoon is an CEO of an archive company. In the 12 years since the establishment of an archive management company in 2011, 600 project orders have been received. As of 2022, it recorded sales of 24 billion won, and has been reborn as the No. 1 company in the Korean archive industry. Choi Kwang Hoon, the CEO, obtained a Ph.D. in archiving and information science from Jeonbuk National University, and participated in various consulting projects and IT development projects. As a result, RM Soft was awarded the Prime Minister's Award in 2020 and has achieved many achievements, including being designated as a "company that is great for younger employees to work (small and medium-sized companies in Seoul)" among small and medium-sized enterprises certified by the Seoul Metropolitan Government and public institutions. Over 200 employees are constantly working to expand our reach into different areas of archive management.

### Abstract

## Archive system and Autostore

In 2022, the number of requests for information disclosure by the Korean public was about 1.8 million, with an average of more than 5,000 cases occurring per day. Requests for information disclosure must be processed in only 10 days, but public institution resources (human resources, time, etc.) are currently insufficient to handle this task. At RM Soft Co., Ltd., we thought about how people who manage documents can handle above tasks in a more efficient way.

First, we realized automation by introducing "AutoStore," a logistics automation system, into the archives. We have reduced the time in minutes to look for documents in the

archives, and you would not have to look for them yourself.

Second, implement archive through document digitization. RM Soft's archive system, Archivist, not only stores digitized image files of archives, but also uses them for retention and utilization. All people in charge can easily check documents by searching on their computers in their own places. In addition, agents can link "Archivist" and "AutoStore" to take out and import documents with a click.

The third is to automatically upload the time of shipment and return, and the borrowers' information by applying RFID. The RM Soft's RFID system features work with "AutoStore" and "Archivist" to update loan information in real time and systematically manage document history. In addition, the RFID system automatically operates at "AutoStore" without any additional operation, enabling full automation of the library.

In addition to building a more efficient work environment, RM Soft is working to combine various new technologies such as NFT, Blockchain, Metaverse, and AI Solution in various forms.

## 아카이브 시스템과 오토스토어

2022년 대한민국 국민이 신청한 정보공개청구 건수는 약 180만건으로 하루평균 약 5천건 이상이 발생되고 있습니다.

정보공개 청구는 단 10일만에 처리해야 하는데, 현재 공공기관 자원(인력, 시간등)으로는 이 업무를 처리하기 턱 없이 부족한 상황입니다.

알엠소프트에서는 문서를 관리하는 사람이 더 효율적인 방법으로 업무를 처리 할 수 있는 방법을 고민했습니다.

첫번째, 물류 자동화 시스템인 "AutoStore"를 문서고에 도입하여 자동화를 실현하였습니다. 문서고에서 문서를 찾는 시간을 분단위로 단축시켰으며, 사람이 직접 문서를 찾지 않아도 됩니다.

두번째, 문서 디지털화를 통해 아카이빙을 실시합니다. 알엠소프트의 아카이브 시스템인 "Archivist"에서는 기록 물의 디지털화 이미지 파일을 저장할 뿐만 아니라 보존 및 활용에도 활용하고 있습니다.

모든 담당자들은 각자의 자리에서 컴퓨터를 통해 문서를 검색하여 쉽게 확인 할 수 있습니다. 또한, 담당자들은 "Archivist"와 "AutoStore"를 연동하여 클릭한번으로 문서를 반출 및 반입할 수 있습니다.

세번째는 RFID를 적용하여 반출 및 반납 시간, 대출자 정보들을 자동으로 업로드하는 것입니다.

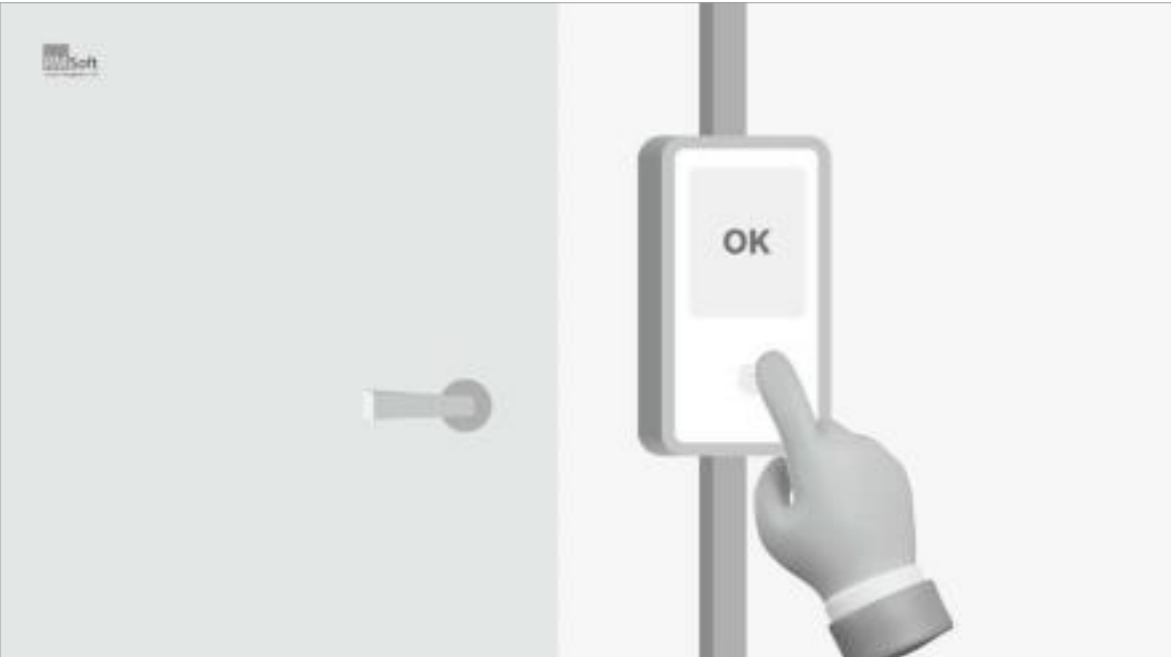

알엠소프트 RFID 시스템 특징은 "AutoStore"와 "Archivist"와 연동하여 대출 정보를 실시간으로 업데이트 하고, 문서의 이력관리를 체계적으로 할 수 있습니다.

또한 별도의 작동 없이 "AutoStore"시 자동으로 RFID시스템이 작동하므로 서고의 전 자동화가 가능하게 됩니다.

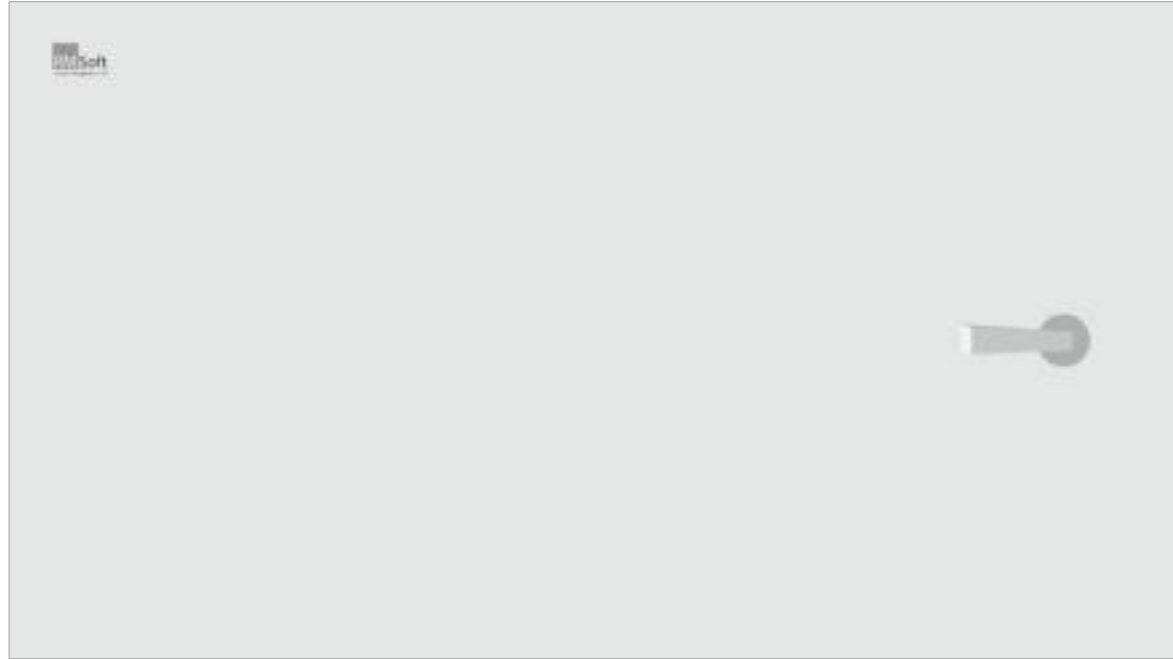

알엠소프트는 이처럼 좀 더 효율적인 업무환경 구축과 함께 NFT, Blockchain, Metaverse, AI Solution 등 다양한 신기술을 여러가지 형태로 접목시키는 일들을 하고 있습니다.

- » 2013 ~ Present Mentor, INNOPOLIS Research Institute Spin-off Company
- » 2006 ~ 2011 Leader, R&D Team, PIRO (currently KIRO)

### Abstract

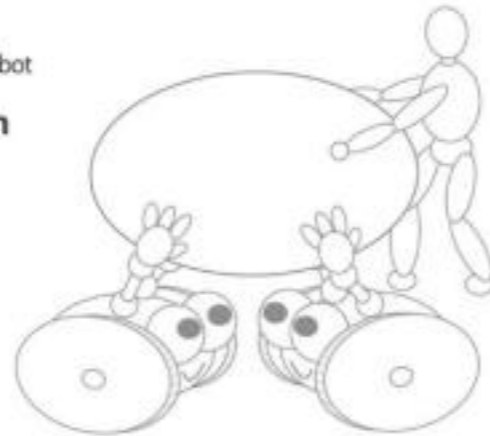

## Modular Mobile Robot with human-robot and robot-robot Collaboration Function

- » Zio Robot was founded by DGIST resarchers in 2022 year. We forcus on the understand of robot technolgy and its field application for leading a future industry.
- » Zio Robot already have enoguh technology and know-how for smart factory, collaborative robot, and smart healthcares etc.

## 인간-로봇 & 로봇-로봇 협동 이송작업이 가능한 모듈형 이동로봇 플랫폼 및 서비스

- » 지오로봇은 2022년 DGIST 연구원들에 의해 설립되었습니다. 미래산업을 선도하기 위한 로봇기술의 이해와 현장적용에 중점을 두고 있습니다.
- » 지오로봇은 스마트팩토리, 협동로봇, 스마트 헬스케어 등에 대한 충분한 기술과 노하우를 가지고 있습니다.

## Modular Mobile Robot with Human-Robot and Robot-Robot Collaboration Function

## Master Class 2 - Smart Manufacturing Innovation

### Yeong Che Fai

Chairman of DF Automation & Robotics

4차산업혁명을 위한 자율 이동 로봇(AMR) 기술  
Autonomous Mobile Robot (AMR) Technology for Industry 4.0

### BIOGRAPHY

Dr. Yeong Che Fai is a highly accomplished professional who serves as the Chairman DF Automation and Robotics, as well as an Associate Professor at Universiti Teknologi Malaysia. Dr. Yeong earned his PhD from Imperial College London and specializes in robotics and entrepreneurship. Dr. Yeong has co-founded several companies. One of his most notable ventures is DF, which produces Industry 4.0-enabled robots that have been successfully exported to various countries including to Asia, Mexico and Europe. Dr Yeong is also a frequent keynote speaker and three-time TEDx speaker.

### Abstract

## Autonomous Mobile Robot (AMR) Technology for Industry 4.0

DF Automation & Robotics is a Malaysia-based robotics company specializing in the design and manufacture of Autonomous Mobile Robots (AMRs) for a range of industries. AMRs are mobile robots that are capable of autonomous movement, enabling them to transport heavy payloads, which is particularly beneficial for material handling and intralogistics applications. By utilizing AMRs, companies can decrease their reliance on manual labor, while also improving efficiency and productivity. During this presentation, Dr. Yeong Che Fai will discuss how DF has leveraged innovative technologies to overcome multiple challenges, including market competition, supply chain disruptions, COVID-19, and talent readiness. Over the course of a decade, DF has developed numerous robot models that are Industry 4.0-ready, and has successfully exported these products to several countries, including Singapore, Thailand, Indonesia, the Philippines, Vietnam, India, Mexico, and Europe.

Soft is working to combine various new technologies such as NFT, Blockchain, Metaverse, and AI Solution in various forms.

## 4차산업혁명을 위한 자율 이동 로봇(AMR) 기술

DF Automation & Robotics는 말레이시아에 본사를 둔 다양한 산업 분야의 AMR(Autonomous Mobile Robots) 설계 및 제조를 전문으로 하는 로봇 공학 회사입니다.

AMR은 자율 이동이 가능한 모바일 로봇으로 무거운 짐들을 운반할 수 있어 자재 취급 및 내부 물류 응용 분야에 특히 유용합니다.

AMR을 활용함으로써 회사는 육체 노동에 대한 의존도를 줄이는 동시에 효율성과 생산성을 향상시킬 수 있습니다. 이 프레젠테이션에서 Young Che Fai 박사는 DF가 어떻게 혁신적인 기술을 활용하여 시장 경쟁, 공급망 중단, COVID-19, 인재 준비 등 여러 과제를 극복했는지에 대해 설명합니다.

10년 동안 DF는 4차산업혁명에 대비한 수많은 로봇 모델을 개발했으며 이러한 제품을 싱가포르, 태국, 인도네시아, 필리핀, 베트남, 인도, 멕시코 및 유럽을 포함한 여러 국가에 성공적으로 수출했습니다.

# Autonomous Mobile Robot (AMR) Technology for Industry 4.0

## Company Overview

Company name : DF Automation & Robotics Sdn Bhd  
Website : www.dfautomation.com  
Founded : June 2012  
HQ : Johor Bahru  
Branches : Kuala Lumpur, Penang & India  
Capital : RM 4 million  
Business Focus : Autonomous Mobile Robot (AMR)  
Automated Guided Vehicle (AGV)

A manufacturing plant as big as  
20,000 square meter.

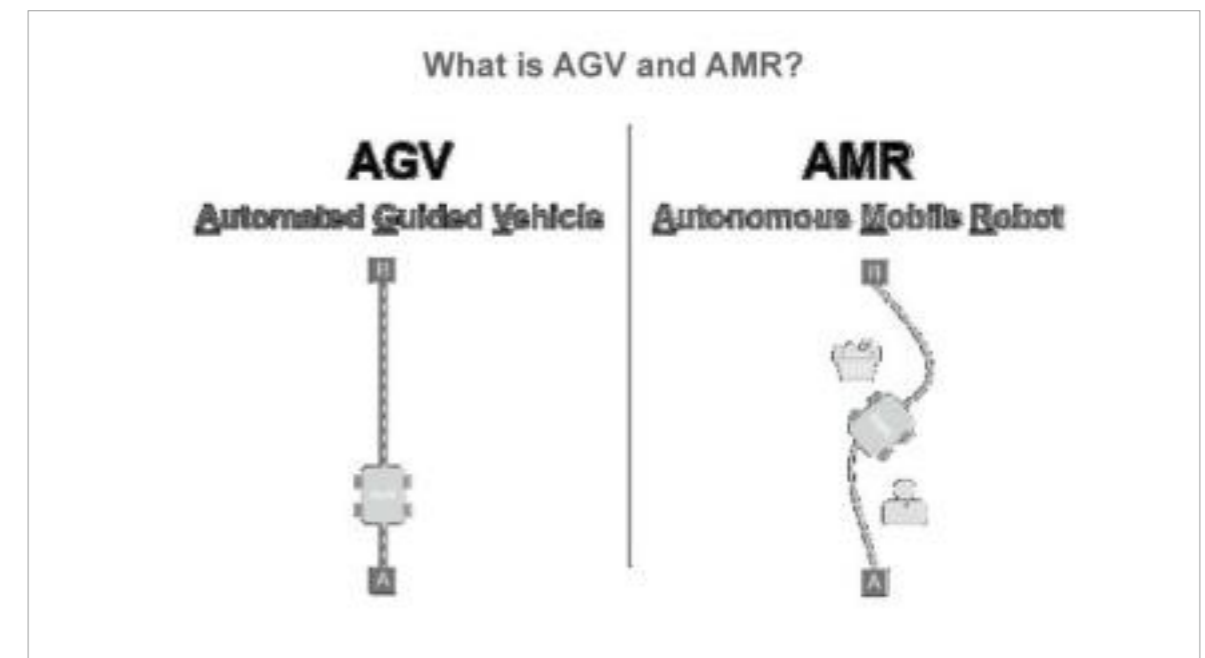

### Current Automated Guided Vehicle (AGV) Solution

- **AGV** has been used extensively in solving this issue **since 1950**.
- It works but **unable** to achieve **full usability/adoption**.
- Challenges in implementing current AGV solution are:
  - Difficult to program
  - Not Flexible
  - Costly

## Project Sales

- Focus on providing **Total AMR Solution** to customer
- Total solution include:
  - Integration with **third party software** like ERP, MES & WMS
  - Integration with **third party equipment** like machine, conveyor, automation & etc
  - Integration with **factory facilities** like lift, door, gate & etc
  - Interfacing with **human** like call system, visual or sound acknowledgement and etc
  - **Custom made** in payload handler, AMR system and accessories
  - **Custom design** in mechanical, E&E & Software

## Customer Support

- Focus on **after sales support** to customer & distribution channel to ensure system uptime
- Focus on generate after sales revenue from **spare parts selling** and different kind of after sales services.

<b>AGV Preventive Maintenance</b> DF provides preventive maintenance package to ensure that the product / system provided is always in good condition for operation.	<b>AGV Troubleshooting &amp; Repair</b> DF has engineers on stand-by to provide emergency on-site troubleshooting and repair services.	<b>Spare Parts Management</b> DF provides spare part management service to customer to manage spare parts and to ensure stock availability.
<b>System Overhaul, Upgrade, Reconfiguration</b> DF provides system overhaul, upgrade and Reconfiguration services to ensure the system is always up-to-date and fully optimized.	<b>Technical Support &amp; Consultancy</b> DF service team is equipped with state-of-the-art technical knowledge to be able to provide technical support & consultancy.	<b>Training</b> DF provides training programmes to ensure users are fully trained to use and service the system provided.

코코넛사일로㈜ 대표 / CEO of Coconut Silo

벤처 기업으로서의 아세안 진출기 및 현지화 전략

The ASEAN Expansion Journey and Localization Strategies as a SME (Small-Medium Enterprise)

### BIOGRAPHY

Coconut Silo, a Hyundai spin off company, is solving problems especially in logistics/commercial vehicle industries. Compared to the personal mobility industry, logistics/commercial vehicle areas are still one of the most outdated industries. In an era in which the importance of digital transformation is being emphasized worldwide, digital transformation of the industry is no longer a distant future, but a reality. To get ready for this upcoming reality, Coconut Silo is providing an AI digital logistics forwarding platform COCOTRUCK in the global market, and "Truck Doctor," a digital truck maintenance platform based on big data, in Korea. Based on the services that we provide, we are eager to meet and greet the new digitized era.

### Abstract

## The ASEAN Expansion Journey and Localization Strategies as a SME(Small-Medium Enterprise)

- » The vision as an entrepreneur by highlighting the challenges and opportunities in emerging markets.
- » Collaboration and cooperation with local companies to build a solid local connections in the middle of unstable global financial status.
- » The value and potential that ASEAN has and Korea as a key partner

## 벤처 기업으로서의 아세안 진출기 및 현지화 전략

- » 벤처 기업들의 신규 시장에 대한 도전과 이에 대한 조명을 통해, 급변하는 시장 상황 속에서 벤처 기업인으로 갖고 있는 비전을 설명하고자 함.
- » 대외적인 금융 시장의 불안으로 인하여 위축된 투자 시장이 지속 되고 있으나, 국외 시장에서 현지 기업들과의 기술 협력과 생태계 구축을 진행하는 배경을 소개하고자 함.
- » 아세안이 지니고 있는 잠재적인 가치와 대한민국과의 긴밀한 협력적 가치를 설파하고, 현지 국가들이 지니고 있는 대한민국에 대한 시각을 소개함으로써, 아세안 시장의 중추적인 입지를 설명하고자 함

## ENTRY INTO ASEAN AND LOCALIZATION STRATEGIES AS A VENTURE COMPANY

### 1. About Coconut Silo

### Our History

We were born to break the digital limits.

- 2018 First founded by the IT in-house Startup Team of Hyundai Motor Group
- 03/2020 Coconut Silo established
- 06/2020 Spun-off from Hyundai Motor Group
- 12/2020 Vietnam branch established
- 12/2021 First branding products in Vietnam market
- 04/2022 Received first order
- 05/2022 established a Joint Venture(JV) in Laos
- 2022 More than 30+ partners and individual drivers in Vietnam
- 03/2023 Service launch in Laos

## Why COCOTRUCK

- Provide customized solutions based on customer requirements.
- Our support team is ready to assist our customers wherever they are located.
- Our IT team from Korea is expertise to update and improve the app continuously.
- COCOTRUCK will reduce businesses' carbon footprint and unnecessary paperwork.

## COCO TRUCK CARRIER

### Highlight Features

- Flexibility in placing online/ offline orders receiving from Shippers or traditional channels.
- Handle real-time orders, parking, and driver status via a cloud-based SaaS platform.
- Assist carriers in obtaining more orders.
- Extract data & reports simply.

### Key Differentiation

- Operation system management.
- Big data storage and analysis.

## COCO TRUCK SHIPPER

### Highlight Features

- Track orders in real-time.
- Select desired carriers in a network of selected reputable suppliers.
- Price suggestions rely on user demand through AI technology.

### Key Differentiation

- Multi-order requests.
- Various prices and logistics service options.

## COCO TRUCK DRIVER

### Highlight Features

- Visualize orders from paper to electronic devices.
- Simple, easy, friendly to drivers.
- Modernize the order processing procedures.

### Key Differentiation

- Convenient online shipping process.
- Transport route optimization.

## Crisis

### Vietnam in the time of COVID-19

#### LOCKDOWN

- Nationwide lock down in June 2021
- Very first return growth after 2000/20, 2021
- Entry limitations (company visitors approval from the government)
- Only passers-by could pass through

#### NOW

- Resumption of entry for foreign tourists without VISA in 15th March 2022
- New normal conversion fully normalized at March 2022

#### Legal regulations

- Limitations for certain industries
- Preparations such as market research and entry strategy are required
- E-Commerce platform for logistics, additional paperwork like WOT suggestions are required

#### Marketing strategy

- As of 2022, Vietnam's smartphone penetration rate is 62.3 million, ranking 15th in the world
- Establish an appropriate marketing strategy considering the average age of about 30 years
- The main marketing channels: Zalo, Facebook, and Instagram
- As of 2019, Vietnam ranks among the top 5 markets in the world in terms of hours spent on YouTube

#### Cultural characteristics

- Need to understand cultural differences between the two countries, including geographical/historical characteristics, different titles appropriate to gender, etc.
- In 1991, the Vietnamese writing system was changed from Chinese characters to Roman characters, but pronunciation still used
- There are additional distinct cultural differences in each region, so it is necessary to establish a strategy suitable for each region

## Strategies

### Vietnam

- Market size: Approx. \$1,000,000,000
- Increase of logistics volume in ASEAN
- Rapid development of Southern Vietnam
- A highway between Hanoi and Ho Chi Minh opened
- Lac Huyen International Pier opened
- Full opening of the logistics market towards foreign investors after 2004
- Possibilities of ICT platform services in ASEAN

### Laos

- Active implementation of ICT infrastructure
- A highway between Lao PDR and China opened
- Established a joint venture (JO) in Laos
- Planning to provide sustainable service in Lao PDR
- Goal: Cross-border logistics in Indochina peninsula

**70%**  
of Korean manufacturer locate Southern Vietnam

**3.5%**  
Estimated growth of Lao PDR economy

#### Objectives of Lao PDR government

1. Securing 900,000 foreign travelers
2. Generating \$218 million in tourism revenue

## Opportunity

Price competitiveness secured by partnering with 3rd party companies

Completion advantage through platform qualitative supplementation

Differentiation strategy

## Reason of the development

- Target ASEAN
- Digital transformation of the logistics industry
- Core technologies protected through 21 patents in total
- Targets all the players (shippers, drivers and carriers)
- Optimization of logistics management procedure through cloud based SaaS for carriers
- Targeted SaaS services for logistics companies
- Real time communication supported

## Business Model

**Truck hailing in Vietnam**  
Increase profitability.  
Based on the above, established an initial strategy for 'cargo transportation brokerage platform' and 3rd party model.

**3rd Party Model**  
Additional services such as insurance, fueling and maintenance provided based on the needs.  
Additional revenue model and business expansion.

### Market access strategy

**Initial market entrance strategy**

- Korean logistics companies in Vietnam  
Handling logistics business based on the network with local companies.  
Phase 1: Comprehensive field test to connect to existing local companies.  
Phase 2: Distribution of app to drivers that can be linked with local firms.
- Korean manufacturers in Vietnam  
Zones with better export industrial conditions than Ho Chi Minh City.  
Customer acquisition through targeting major industrial companies.

**Maturity stage strategy**

- Talent acquisition for global expansion.
- Global platform linkage and cloud expansion to secure server stability.
- Commerce industry expansion.

## Core Algorithms

- Smart consolidation algorithm
- Process optimization based on deep learning analysis
- Real time dashboard and statistical processing algorithm
- Route optimization algorithm based on the consolidation possibility

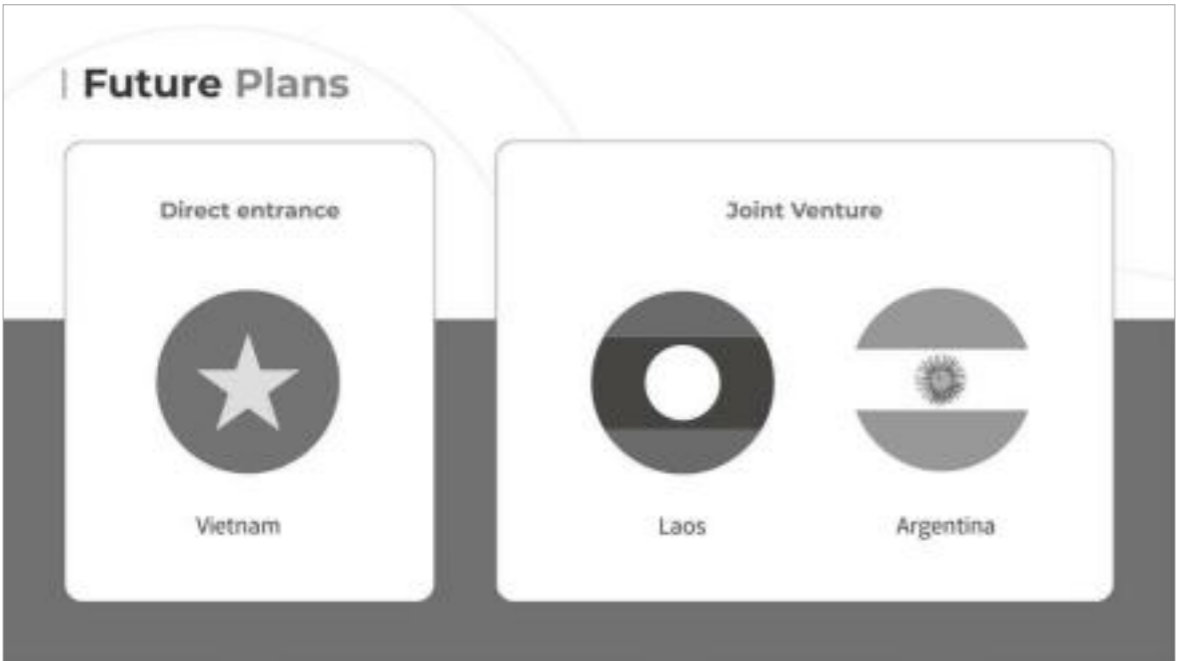

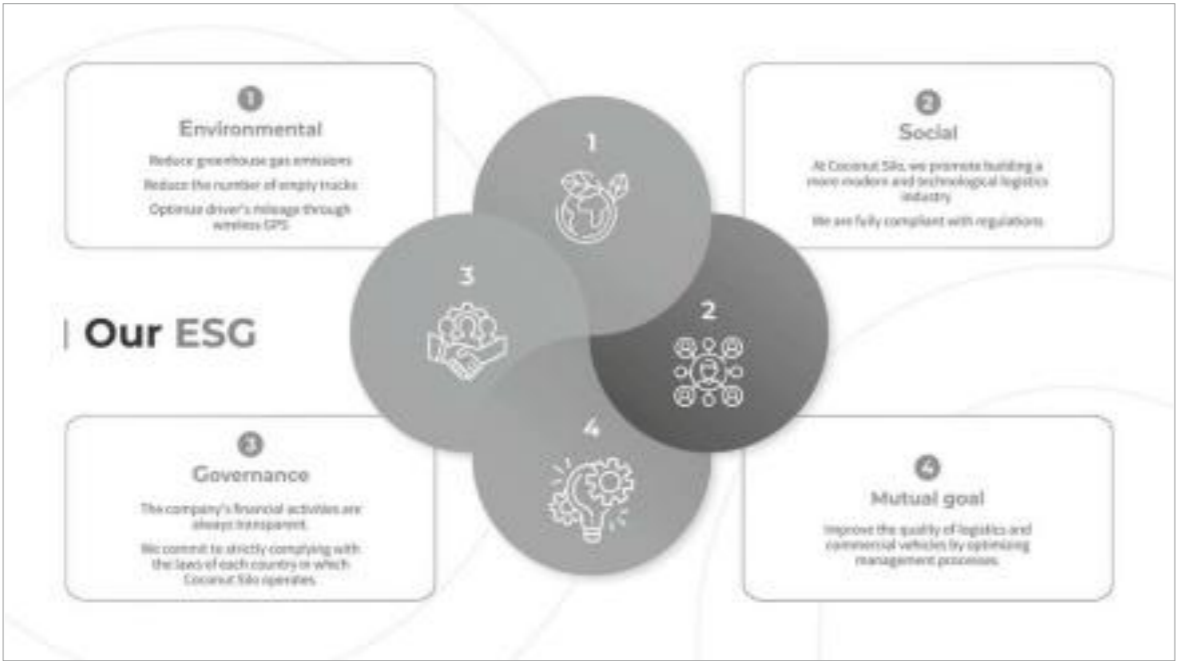

**COCO TRUCK**

- Targeted SaaS services for logistics companies
- Real time communication supported

## Logistics/cargo market

- Shipper**
  - Move goods without owning truck
  - Realtime tracking
- Carrier**
  - Tax and accounting through SaaS
  - Management of logistics process
- Driver**
  - Efficient transportation
  - No action needed while driving
  - Eco friendly driving assistance system

What do we do with AI?

Core Technology Overview Our technology Our product About WKIT | 8

## Re-identification technology

Recognizes the same object in multi-channel CCTV footages and matches objects based on similarity evaluation

Core Technology Overview Our technology Our product About WKIT | 7

## Real-time video analysis technology

Video analysis of related image information, real-time recording & alarm when a specific event occurs in multi-channel CCTV footage

Core Technology Overview Our technology Our product About WKIT | 10

## Video security & personal information protection technology

Real-time object detection de-identification, copyright information management for high-definition, large-capacity video (based on domestic standard lightweight model)

## Our product

### VISCOPER

VISCOPER Wild animal detection

### FIREWATCHER

CROWWATCHER

### SECUWATCHER

VISIMATCH

AI Vision Analysis platform (VAP)

## VISCOPER

### Wild Animal Detection

A solution that can be used in areas such as ecological monitoring, wildlife protection and crop protection by applying deep learning video analysis technology to find wild animals in images taken by CCTV / trap cameras and analyse the appearance, frequency, and events of specific objects.

#### Main Function

#### Features

- 01 People, Vehicle, Animal detection
- 02 Provide statistical data
- 03 Can be linked to existing operating platform (system)
- 04 Available to analyse and classified by wildlife object (12 species: Deer, goat, etc. (see deer, deer, raccoon, etc. animal, monkey, rabbit, etc. (dog, etc.))
- 05 High analysis accuracy rate (false rate: 0.1% (over 10000) (above 99.9%)

WKRIT

## VISCOPER

### Intelligent Video Analysis Solution

A solution that uses deep learning based video analysis algorithm to detect and re-identify (Re-ID) people & vehicle objects in CCTV footages to track moving paths and search high-capacity CCTV images

#### Features

- 01 Multiple CCTV simultaneous analysis
- 02 Multi by vehicle type, license plate analysis
- 03 Human object clothing color analysis
- 04 Track location with designated object recognition and re-identification

#### Main Function

## FIREWATCHER

### Forest Fire Detection Solution

A state-of-the-art forest fire situation analysis solution for early response to fire extinguishing that detects smoke (not flame), in multi-channel CCTV footages by applying deep learning video analysis technology

#### Main Function

#### Features

- 01 Detects the initial situation of a fire by detecting 'smoke' rather than 'flame'
- 02 A deep learning model that minimizes false detection of smoke like clouds, fog, etc.
- 03 Enables simultaneous real-time multi-channel analysis and monitoring

WKRIT

## CROWDWATCHER

### Intelligent Crowd Characteristic Analysis Solution

Overview Our technology Our product About WKT | 17

A solution that analyzes the density of multiple people in the set area of CCTV footage based on deep learning video analysis technology and detects dangerous situations to enable rapid response.

#### Main Function

- CCTV video control in real-time
- Setting criteria for counting and clustering events & warning when events occur
- Search, view, delete, identify events (searchable by date, CCTV, event)
- Manage CCTV lists and provide event statistics

#### Features

- CCTV real-time video analysis (crowd counting, density, identity, mobility, speed, etc.)
- Performs 100% deep learning of core technologies (AI video identification, crowd count, crowd measurement, movement direction prediction)
- AI Edge device can be connected to some installed CCTV to analyze
- Support for rapid alarm and response to dangerous situations (Disaster response center, Road traffic safety, Crowd gathering, etc.)

WKT

## MOSAICER

### AI based Video Masking Web-service

Overview Our technology Our product About WKT | 18

Image de-identification web service provided based on AWS cloud to prevent exposure of personal information when images containing personal information are taken out.

A service that can easily and quickly apply masking on various file formats (video/image) to protect personal information.

#### How to use

- Plan Selection**  
Create an account, check the location of the video file and then select the plan to apply.
- Upload a video**  
Upload the video file by selecting the masking type for the video after payment.
- Convert masking image**  
After uploading the file, request for report, and you can get daily for video report with fixed amount of points.

#### Features

- Easy to use both online and mobile and do not require separate installation
- Users can apply identification/de-identification of objects they want and adjust the degree of masking
- Possible to detect/identify people, faces, vehicle and license plate with high accuracy
- Users can freely choose the objects to be de-identified

WKT

## SECUWATCHER

### Intelligent Video Information Security Solution

Overview Our technology Our product About WKT | 19

A video information security solution that can protect personal information by encrypting and storing video information captured at the CCTV control center through expert management, forgery prevention and leakage detection.

#### Main Function

- Personal privacy protection based on PDR
- Video tampering prevention
- High-speed encryption when saving recorded video (Extraneous encryption module)
- Provides information only under authority

#### Feature

- Automatic and manual object tracking function (Human & Face Detection)
- Image/text watermarking technique (Applying per-camera watermarking technique that is strong against video attack)
- Differentiate video authority functions for the police and for civil petitioners
- Application of domestic standard lightweight encryption module (LTK-100)
- Video access control using only a dedicated layer
- Systematic video transfer process through the management server

WKT

## dara

### Cloud based AI video analysis platform

Overview Our technology Our product About WKT | 20

Dara is an AI video analysis platform that utilizes the GPU resource pool of cloud infrastructure. By applying WKT's AI engine (AI data), it analyzes objects such as people and cars in real time and provides various services.

#### Features

- Various services provided in modular form
- LIVE CONTROL (CLOUD MANAGE) FACED Etc.
- Cloud-based service
- Personalized management (manage hand-drawn, monitoring and adding new equipment, simplifying outdoor expansion)
- Support both Cloud and On-premise
- Passes Korea intelligent CCTV performance certification (Korea Learning, Enhanced)
- Web & Mobile support & UI optimized for each device
- Efficient high-definition video storage using the latest compression standard technology
- Provide video transfer service through personal video information system (connected)

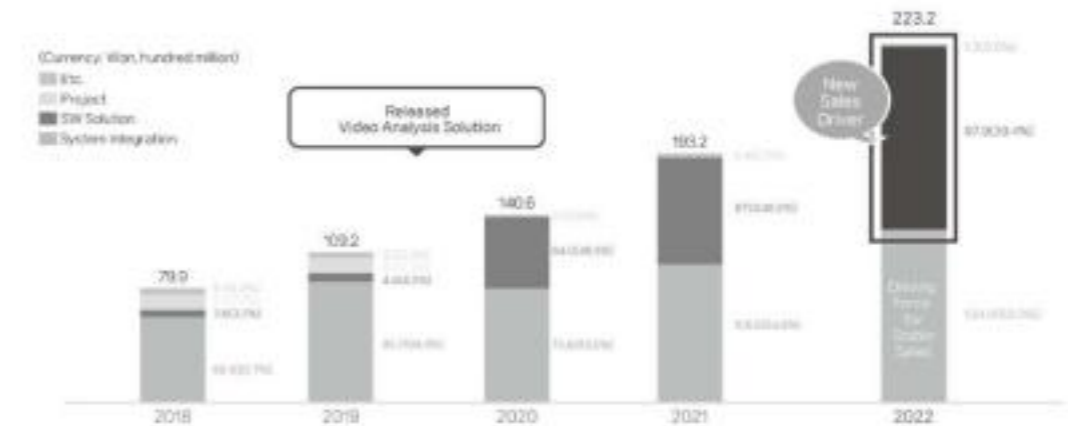

WKT

## About WKIT

### Sales Growth Status

Overview Our technology Our product About WKIT | 23

- WKIT has maintained stable sales through SI business
- In 2020, WKIT's SW sales grew about 15 times compared to previous year

### Company Profile

Overview Our technology Our product About WKIT | 21

- Company**  
Wooyoung Information Technology Co., Ltd.
- Date of Establishment**  
10th December 2008
- Business Type**  
Software Development
- Capital**  
71.5 billion (won, ₩) (as of Oct. 2022)
- Employee**  
179 (as of March 2023)
- Product / Business**  
Artificial Intelligence (People/Vehicle/Wild animal detection AI,  
Dangerous situation (fire, industrial accident) detection AI etc.)  
Blockchain, Big-data,  
Cloud based software development & supply

## Master Class 3 - Public Safety & Traffic Management

### Tulga Galbadrakh

CEO of Systems Engineering Mongolia

몽골의 장애아동 지원 : 생체 공학 팔 개발을 통한 삶의 질 향상

Empowering Children with Disabilities in Mongolia: Developing Bionic Prosthetic Hands to Improve Quality of Life

## BIOGRAPHY

» Tulga Galbadrakh is an accomplished entrepreneur and technologist with a passion for developing innovative products that make a positive impact on society. As the founder of SEM LLC and SEM BIONICS LLC, Tulga has dedicated his career to the development of bionic prosthesis and green energy technologies that push the boundaries of what is possible. With his background in engineering and programming, Tulga is able to provide expert guidance on a variety of systems, including automatic fuel, water, and electricity dispensers, as well as online monitoring systems. He has overseen multiple projects in this capacity, from the engineering and installation of self-service fuel and LPG dispensers, EV chargers, to the creation of automatic freshwater dispensers.

## Abstract

### Empowering Children with Disabilities in Mongolia: Developing Bionic Prosthetic Hands to Improve Quality of Life

Our pitch focuses on empowering children with disabilities in Mongolia by developing bionic prosthetic hands to enhance their quality of life. The prevalence of disabilities among children in Mongolia is a significant concern, often resulting in limited opportunities and challenges in daily activities. This project aims to address these issues by designing and producing advanced bionic prosthetic hands tailored specifically for children with upper limb disabilities.

Through collaborative efforts between engineers, prosthetics specialists, and healthcare professionals, the project aims to develop affordable and functional prosthetic hands that mimic natural movements and provide increased dexterity. The bionic prosthetic hands

will be customized to meet the unique needs and preferences of each child, allowing them to regain independence and actively participate in various activities, including self-care, education, and social interactions.

The project will also focus on providing training and support to both the children and their families, ensuring proper fitting, maintenance, and skill development for optimal use of the prosthetic hands. Furthermore, awareness campaigns will be conducted to reduce stigmatization and promote inclusivity within Mongolian society.

By empowering children with disabilities through the development of bionic prosthetic hands, this project strives to improve their overall well-being, boost self-confidence, and enable them to lead fulfilling lives. The positive impact of this initiative extends beyond the individual children, creating a more inclusive and compassionate society that values diversity and equal opportunities for all.

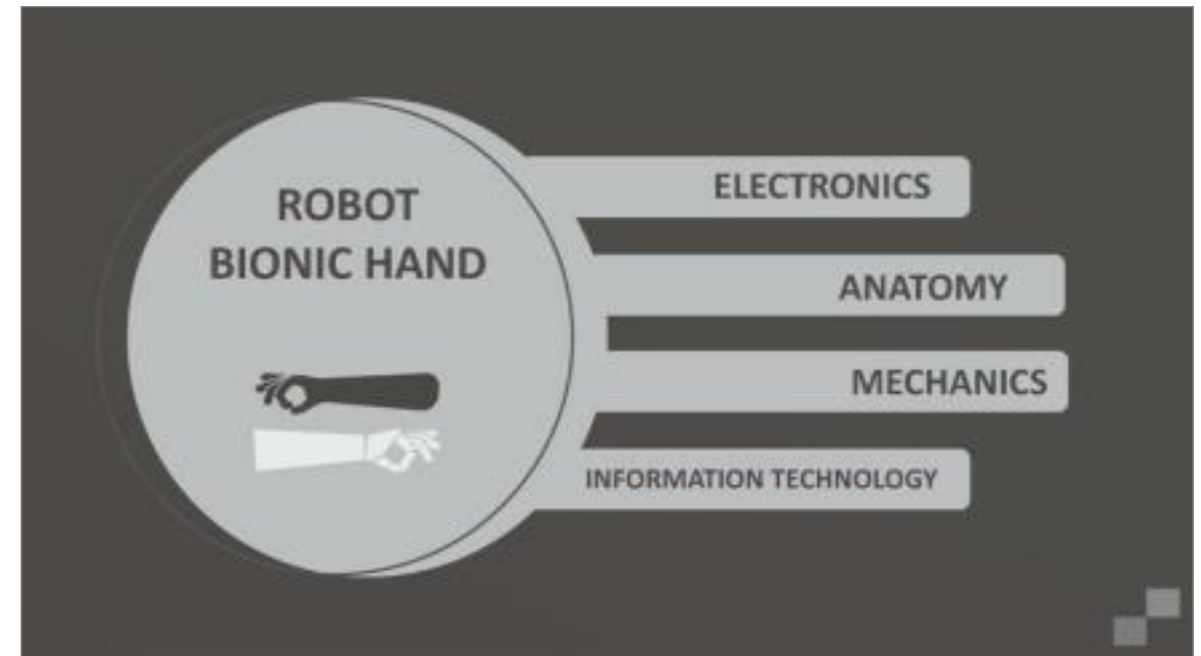

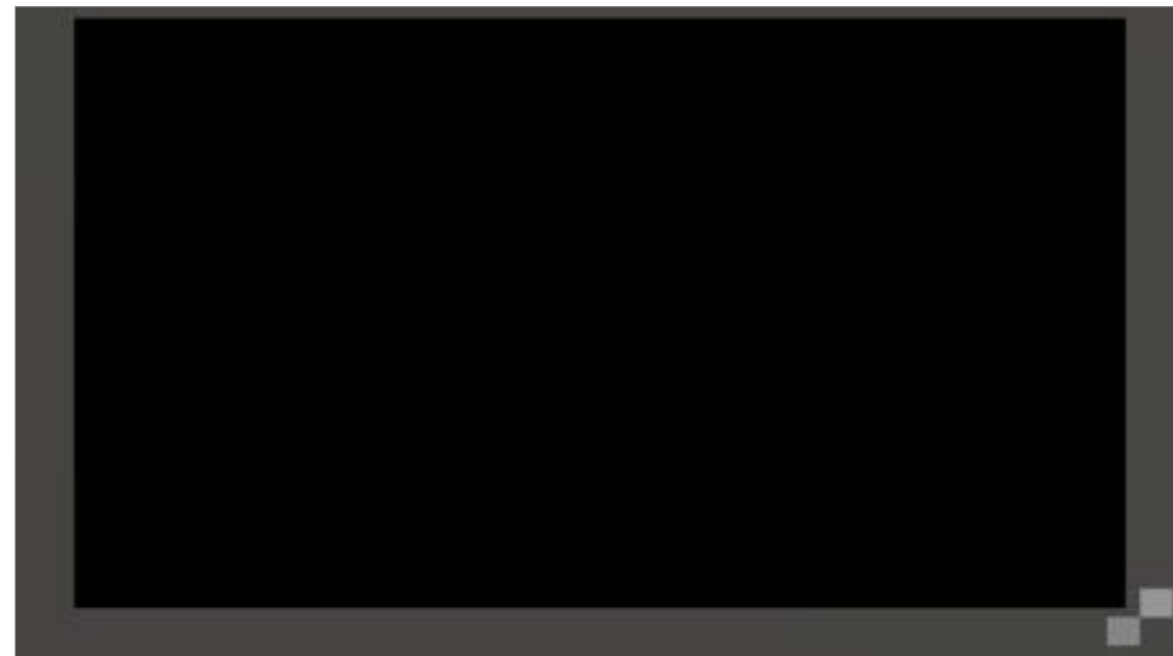

### 몽골의 장애아동 지원 : 생체 공학 팔 개발을 통한 삶의 질 향상

SEM는 삶의 질을 향상시키기 위해 생체 공학적 의수를 개발하여 몽골의 장애 아동에게 권한을 부여하는 데 중점을 둡니다. 몽골 아동의 장애 유병률은 심각한 우려 사항이며 일상 활동에서 기회와 도전이 제한되는 경우가 많습니다. 이 프로젝트는 상반신에 장애가 있는 어린이를 위해 특별히 제작된 첨단 생체 공학적 의수를 설계하고 생산함으로써 이러한 문제를 해결하는 것을 목표로 합니다.

엔지니어, 보철 전문가 및 의료 전문가 간의 협력 노력을 통해 이 프로젝트는 자연스러운 움직임을 모방하고 향상된 손재주를 제공하는 저렴하고 기능적인 의수를 개발하는 것을 목표로 합니다. 생체 공학 의수는 각 어린이의 고유한 요구와 선호도에 맞게 맞춤화되어 독립성을 기르고 자기 관리, 교육 및 사회적 상호 작용을 포함한 다양한 활동에 적극적으로 참여할 수 있습니다.

이 프로젝트는 또한 의수를 최적화하기 위한 적절한 피팅, 유지 관리 및 기술 개발을 보장하면서 어린이와 그 가족 모두에게 교육 및 지원을 제공하는 데 중점을 두고 있습니다. 또한 몽골 사회 내에서 차별을 줄이고 포용성을 증진하기 위한 인식 캠페인을 실시할 것입니다.

바이오닉 의수 개발을 통해 장애 아동의 역량을 강화함으로써 이 프로젝트는 장애 아동의 전반적인 삶을 개선하고 자신감을 고취하며 만족스러운 삶을 영위할 수 있도록 노력합니다. 이 프로젝트는 프로젝트 참여 어린이들을 넘어 다양성과 모두를 위한 평등한 기회를 중시하는 보다 포용적이고 온정적인 사회를 만들어 나갈 것입니다.

## SEM BIONICS TIMELINE

### 2019 IDEATION

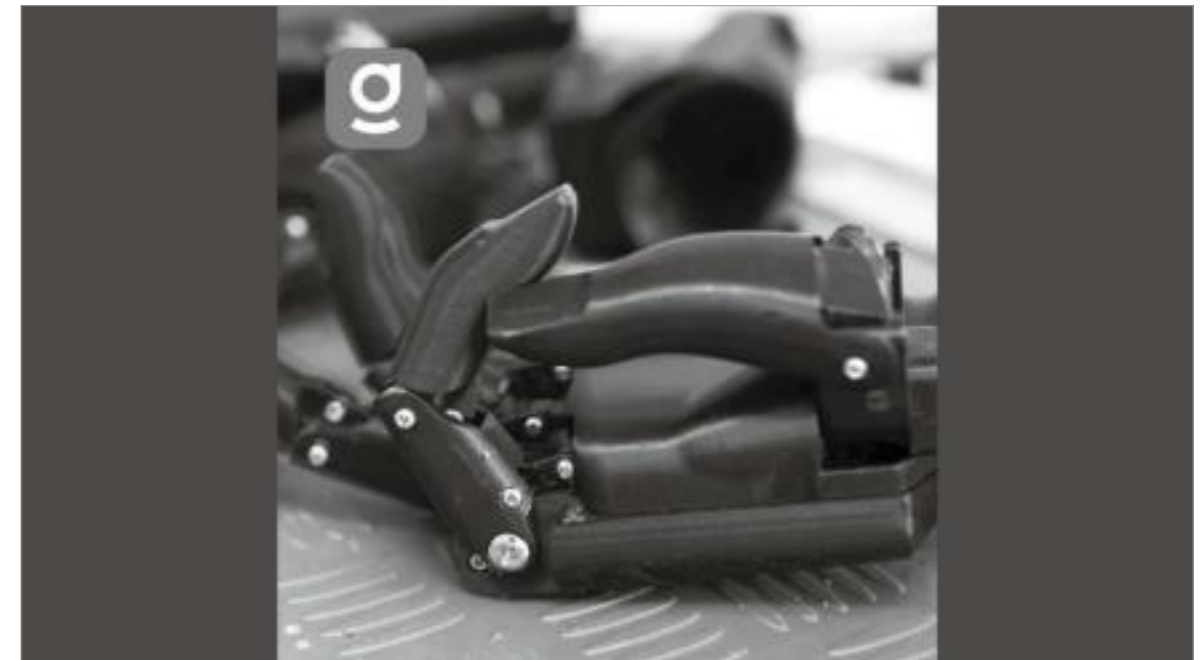

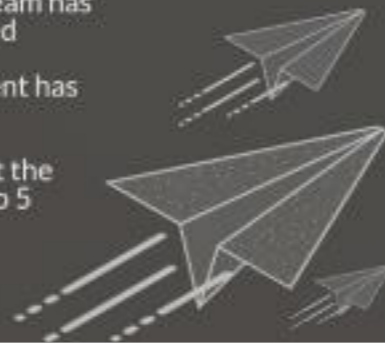

First idea of the project

### 2020 FEASIBILITY STUDY

- Defined project scope and requirements
- Research has begun

### 2021 DEVELOPMENT

- A project team has been formed
- Development has begun
- Handed out the first hand to 5 children.

## SEM BIONICS TIMELINE

### 2021 DESIGN

- Additional design improvements have been made

### 2022 TESTING

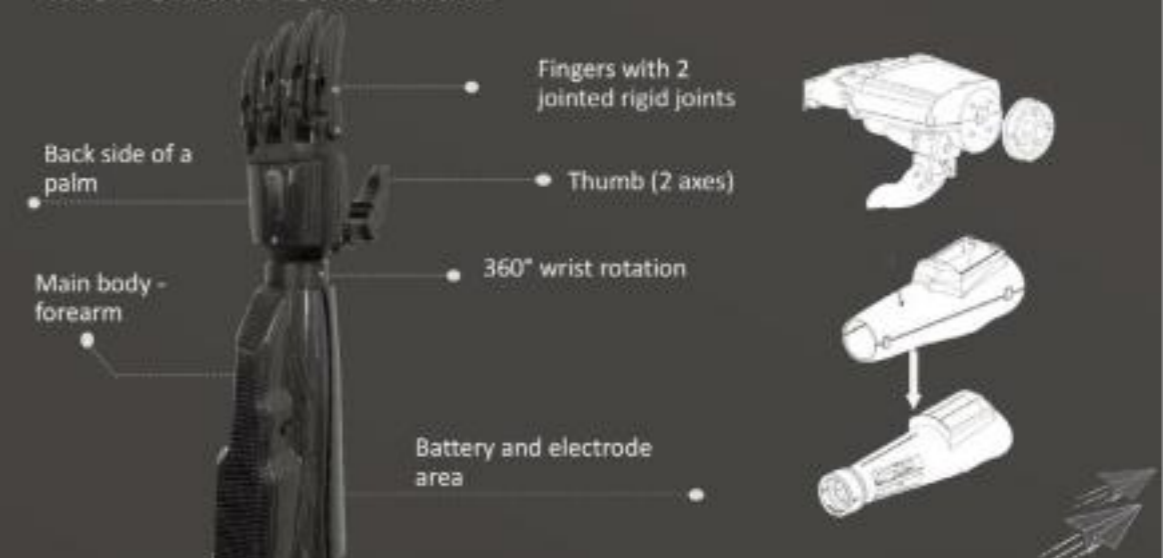

- User testing and testing continues to improve.
- The user performs a few simple movements.
- Electronic bionic hand were given to 7 children.

### 2023 MARKET PRODUCT

- A fully usable product with UX improvements will enter the market

## MODULAR BIONIC HAND

## SEM BIONICS BIONIC HAND

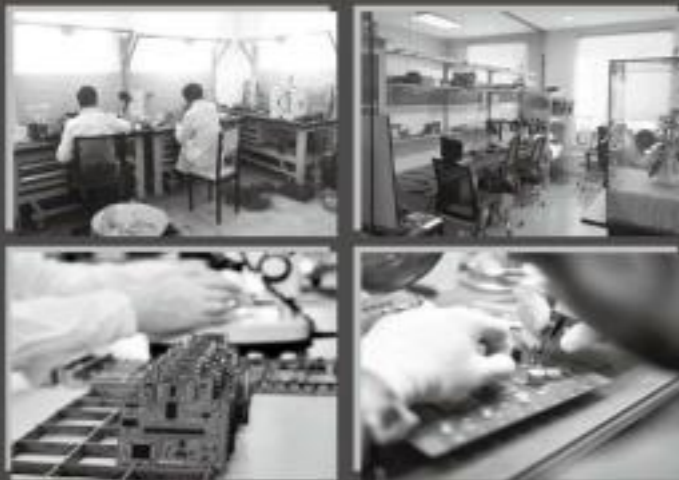

SEM Bionics uses a 3D printers to print the main material of the PLA, make the outer carbon coating in Mongolia, and buy auxiliary parts from the United States, China, and Hong Kong.

## Master Class 4 - Technology for a Healthy Life

**김 선 우** Seonwoo Kim

(주)딥바이오 대표 / CEO of Deepbio

디지털 병리학 시대에 AI를 활용한 현대 암 진단, 예후 및 치료

Modern Cancer Diagnosis, Prognosis and Treatment using AI in the Era of Digital Pathology

### BIOGRAPHY

Sun Woo Kim, the founder and CEO of Deep Bio Inc., has a proven record of over 20 years in executive management as well as computer science expertise. He founded Deep Bio based on the firm belief that AI can revolutionize healthcare and address some of the existing challenges, starting with improved diagnostic processes. Prior to founding Deep Bio, he served as the Chief Technology Officer of Pinion Industries, and automotive software and security start-up. He was also the deputy directory of KT, the largest telecommunications company in Korea, where he led the global venture capital team.

### Abstract

## Modern Cancer Diagnosis, Prognosis and Treatment using AI in the Era of Digital Pathology

Digitization brought dramatic changes to the different parts of the healthcare industry. Pathology, a field in which the adoption of digitization has been quite slow compared to other fields, is now poised for the long-awaited transition to digitization. Gaining momentum as a proven and essential technology, digital pathology can be a great solution to resolve problems pathologists are facing: increasing workload but not enough human resources to deal with it. This presentation introduces an AI-powered cancer diagnostic support software for prostate cancer, the most common cancer among males. Integrated to the current workflow, the diagnostic support software can provide pathologists with meaningful benefits including minimizing the risk of human errors from the subjectivity of pathologist assessments, leading to more precise and consistent diagnostic results, and improved reproducibility. At the same time, the talk elaborates on the cutting-edge

deep learning system applied to the diagnostic software space, which overcame its limits for better performance and higher utilization. At the end of the speech, the values of the cutting-edge technology that encompasses the entire journey of cancer care will be presented: diagnosis, prognosis, treatment. The speech will enable the audience to gain a better understanding of the AI capabilities that can be integrated into the existing pathology workflow and change the current cancer treatment environment.

## 디지털 병리학 시대에 AI를 활용한 현대 암 진단, 예후 및 치료

디지털화는 의료 산업의 다양한 부분에 극적인 변화를 가져왔습니다.

다른 분야에 비해 디지털화의 도입이 상당히 느린 병리학은 이제 오랫동안 기다려온 디지털화로의 전환을 앞두고 있습니다. 검증된 필수 기술로 추진력을 얻고 있는 디지털 병리학은 병리학자가 직면하고 있는 문제, 즉 작업량은 증가하지만 이를 처리할 인적 자원은 부족한 문제를 해결하는 훌륭한 솔루션이 될 수 있습니다.

이 프레젠테이션에서는 남성에게 가장 흔한 암인 전립선암에 대한 AI 기반 암 진단 지원 소프트웨어를 소개합니다.

현재 워크플로에 통합된 진단 지원 소프트웨어는 병리학자 평가의 주관성으로 인한 인적 오류 위험 최소화, 보다 정확하고 일관된 진단 결과 및 향상된 재현성 등 의미 있는 이점을 병리학자에게 제공할 수 있습니다.

동시에 더 나은 성능과 더 높은 활용도를 위해 한계를 극복한 진단 소프트웨어 공간에 적용된 최첨단 딥러닝 시스템에 대해 설명한다.

강연 말미에는 암 치료의 전 과정을 아우르는 첨단 기술의 가치인 진단, 예후, 치료가 제시될 예정이다.

강연을 통해 청중은 기존 병리학 워크플로에 통합될 수 있는 AI 기능에 대해 더 잘 이해하고 현재 암 치료 환경을 바꿀 수 있습니다.

## Modern Cancer Diagnosis, Prognosis and Treatment using AI in the Era of Digital Pathology

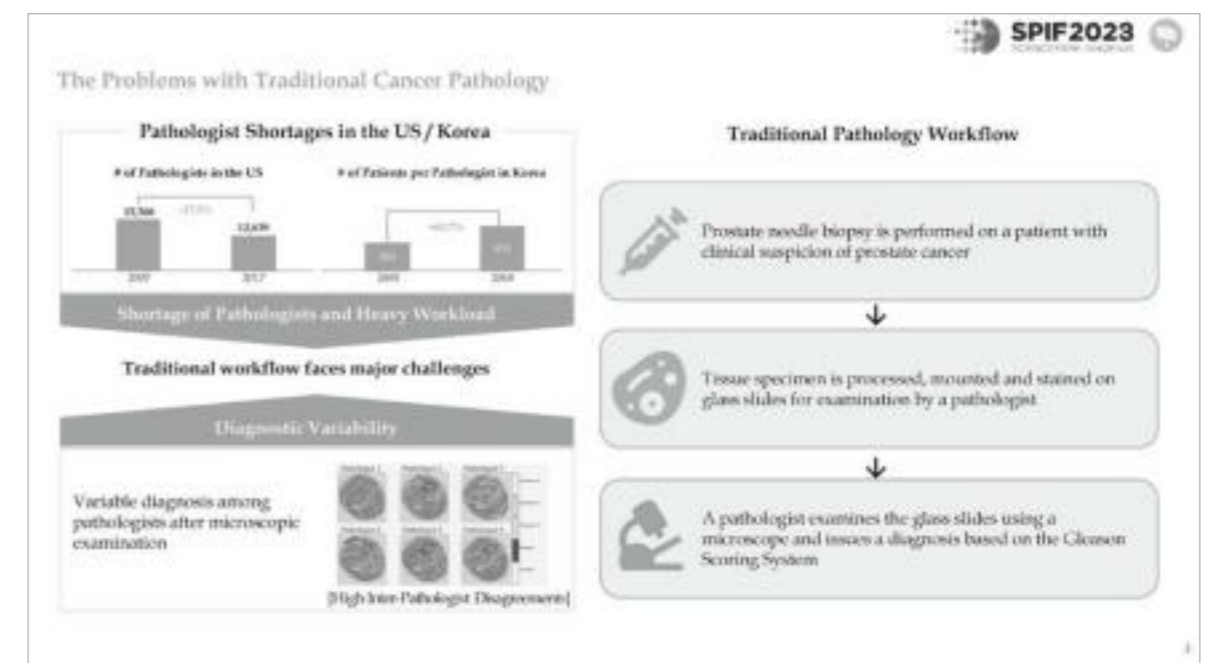

All Rights Reserved © Deep Bio Inc. 2023

Deep Bio Inc. is an AI healthcare company with in-house expertise in deep learning and cancer pathology. Our vision is to radically improve efficiency and accuracy of pathologic cancer diagnosis and prognosis, by equipping pathologists with deep learning-based IVD SaMDs\* (In Vitro Diagnostics Software as a Medical Device), for optimal cancer treatment decisions.

\* IVD SaMDs: In Vitro Diagnostic Software as a Medical Device including Diagnostics (Di), Companion Diagnostics (CDi), Prognostics (Pr)

All Rights Reserved © Deep Bio Inc. 2023

### Cancer Diagnostic Process in General

Step 1.

Prostate needle biopsy is performed on a patient with clinical suspicion of prostate cancer

Step 2.

Tissue specimen is processed, mounted and stained on glass slides for examination

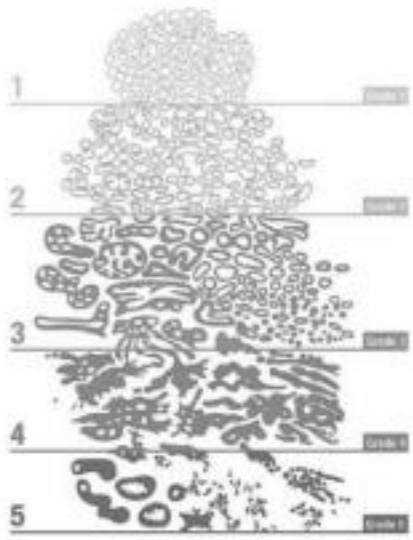

Step 3.

A pathologist examines the glass slides on a microscope and issues a diagnosis based on the Gleason Scoring System

© All Rights Reserved © Deep Bio Inc., 2021

### Pathologists then issue diagnoses using the Gleason Scoring System

### Pathologists examine prostate needle biopsies through microscopes

### Gleason pattern ratio is important for prognostic prediction

CAP Approved

Genitourinary - Prostate 4.0.2.0

Health Equity - Specimen-Level Summary

#### Surgical Pathology Cancer Case Summary

Protocol posting date: June 2017

PROSTATE GLAND: Needle Biopsy (Specimen-Level Summary) (Form R)

Note: This specimen-level summary is recommended for reporting biopsy specimens, but is NOT REQUIRED for accreditation purposes.

Select a single response unless otherwise indicated:

Specimen Location (specify): \_\_\_\_\_

Percentage of Pattern 4 or Gleason Score 7/4-4-3 Gleason only 2 quadrants: \_\_\_\_\_ %

+ Percentage of Gleason Patterns 4 and 3 (equivalent to Gleason score greater than 7): \_\_\_\_\_ %

+ Percentage of pattern 4: \_\_\_\_\_ %

+ Percentage of pattern 3: \_\_\_\_\_ %

Is there any Carcinoma (GC) (Form R):

\_\_\_\_ Not identified

\_\_\_\_ Present

\_\_\_\_ Cannot be determined

CAP Approved

Genitourinary - Prostate 4.0.2.0

Health Equity - Specimen-Level Summary

#### Form R (Genitourinary - Prostate 4.0.2.0)

Number of positive cores: \_\_\_\_\_

Percentage of cores: \_\_\_\_\_

\_\_\_\_ Cannot be determined

and

Estimated percentage of prostate glands involved in tumor for use with the percent amount of tumor: \_\_\_\_\_ %

+ Percentage of tumor in each core: \_\_\_\_\_ %

**The Problems with Traditional Cancer Pathology (ex. Prostate)**

**Gleason's Pattern**

1. Small, uniform glands
2. More drama between glands
3. Distinctly infiltrative margin
4. Irregular, crowded, or fused glands
5. Very prominent gland invasion

**CAP Requirements: Ratio of Gleason patterns 4 & 5 Tumor Ratio**

**\* Gleason Pattern: Severity of Prostate Cancer**

**\* CAP: College of American Pathologists**

Subjectivity and variability in quantifying metrics such as the tumor ratio, Gleason pattern ratio

**Whole Slide Images (WSI)**

Digital images generated from the given diagnostic slides

- Whole slide area scanned at the given magnification level (20x, 40x)
- Scanning takes a few minutes for a single scan at 40x
- Multi focal plane scanning (z-stacking) takes up to several hours

WSI can be used for the primary diagnosis at U.S.

- Whole-slide imaging system = scanner + display + viewer software
- Color reproducibility is a major concern in FDA approval

**Outstanding Deep Learning Technology for Image Classification**

**Machine Learning**

Domain experts extract features for classification and machine learning is used to train algorithms with the features

**Deep Learning**

Deep learning is used to extract features for classification and train algorithms which leads to performance improvement

**Challenges in Dealing with WSI**

Image size is very large

- Scanning 2cm x 3cm area at 40x
- = around 80,000 x 120,000 pixels
- = 10G pixels = 30GB at no compression

Image colors can vary significantly

- Scanner
- Tissue thickness
- Staining dye

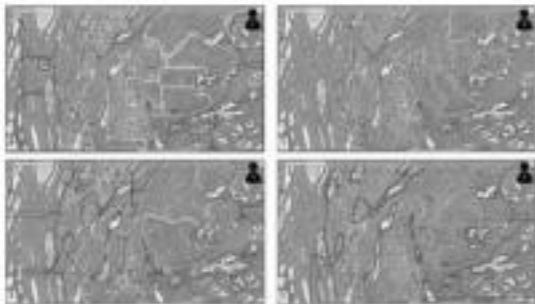

Sample WSI from TCGA

Breast lymph node images from various institutions (Camelyon16)

### Challenges in Developing Image Analysis Algorithms

**Lack of data**

- small number of cases (typically less than 10,000 for a single disease)
  - similar morphology from a single patient
- expensive expert annotation
  - inter-observer discrepancy

Different prostate cancer region annotations on the same tissue

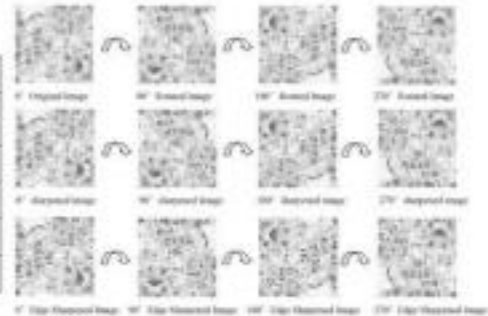

13

### Data Augmentation

Adding new training data, synthesized from original one

- Overcoming data-limit situation

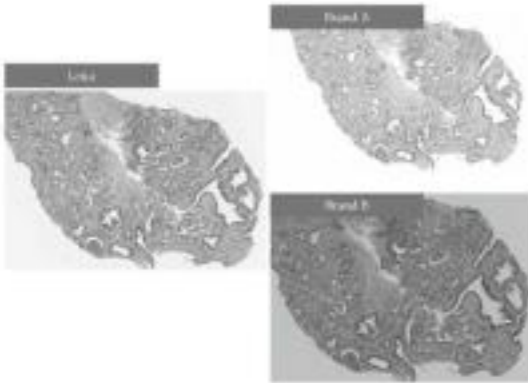

Orientation	Rotate by 90°, 180° or 270° Flip horizontally and/or vertically
Sharpness	Apply blur / sharpen filter
Location	Apply random cropping
Size	Apply random resizing

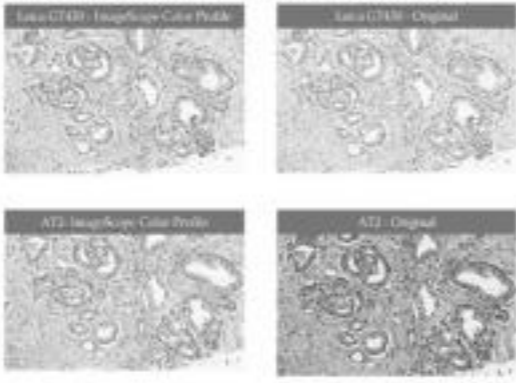

14

### Every Scanner and Scanning Process Produces a Different Color Appearance

**Scanned Images from Different Scanner Brand**

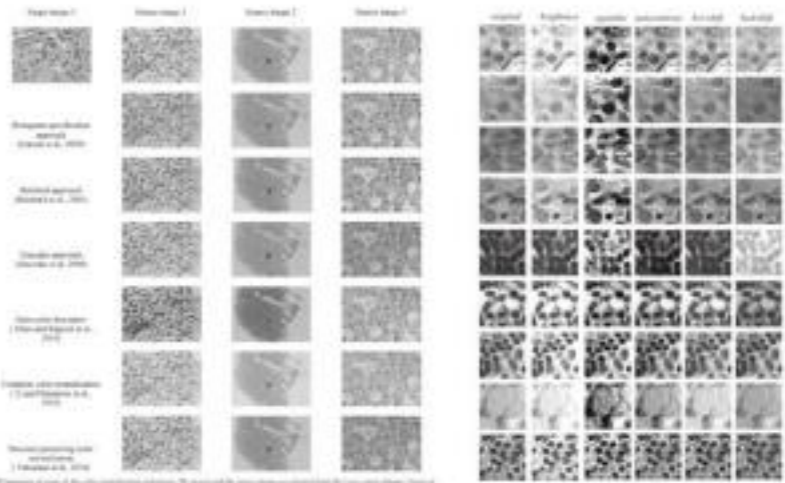

**Scanned Images from Same Scanner Brand, Different Model**

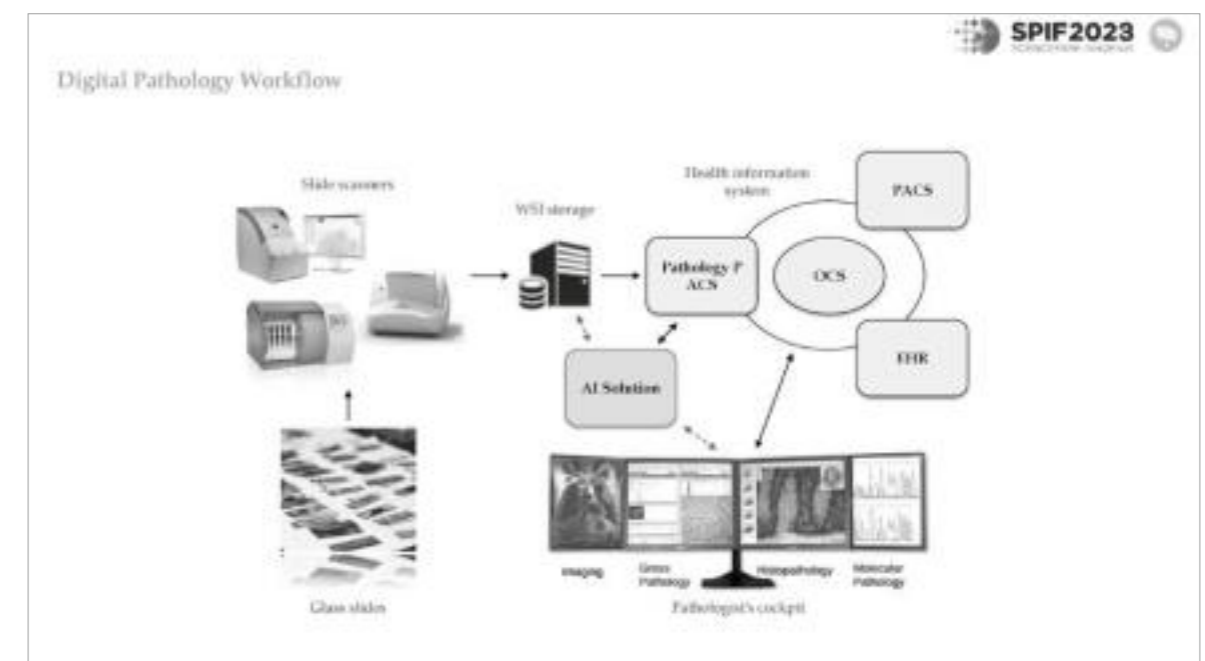

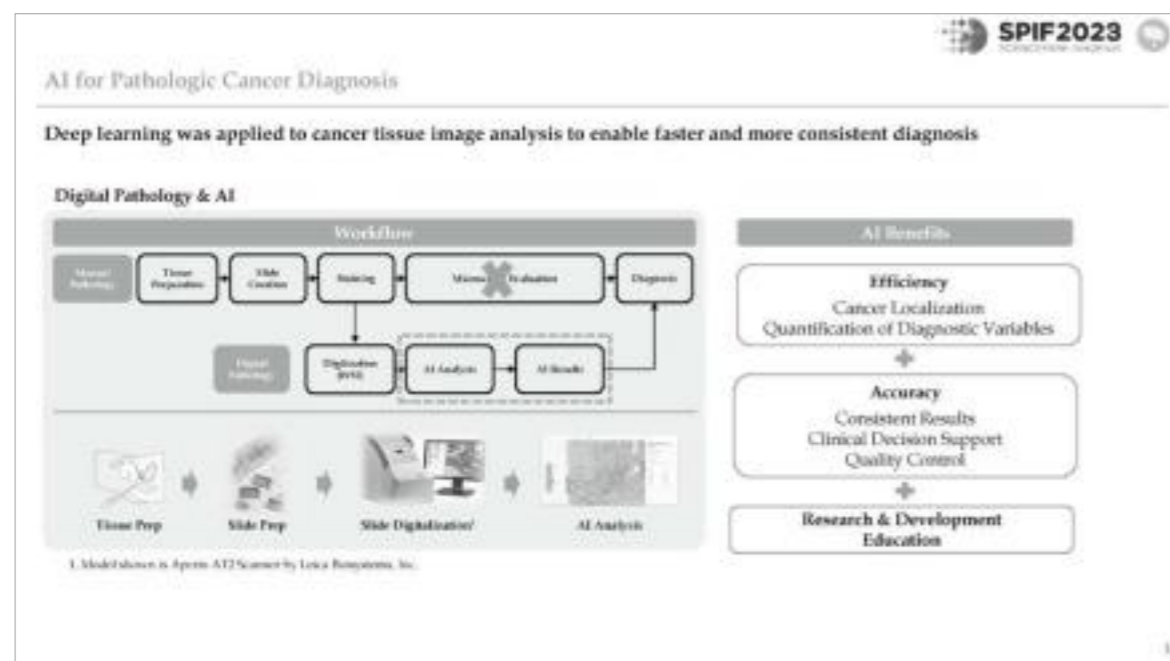

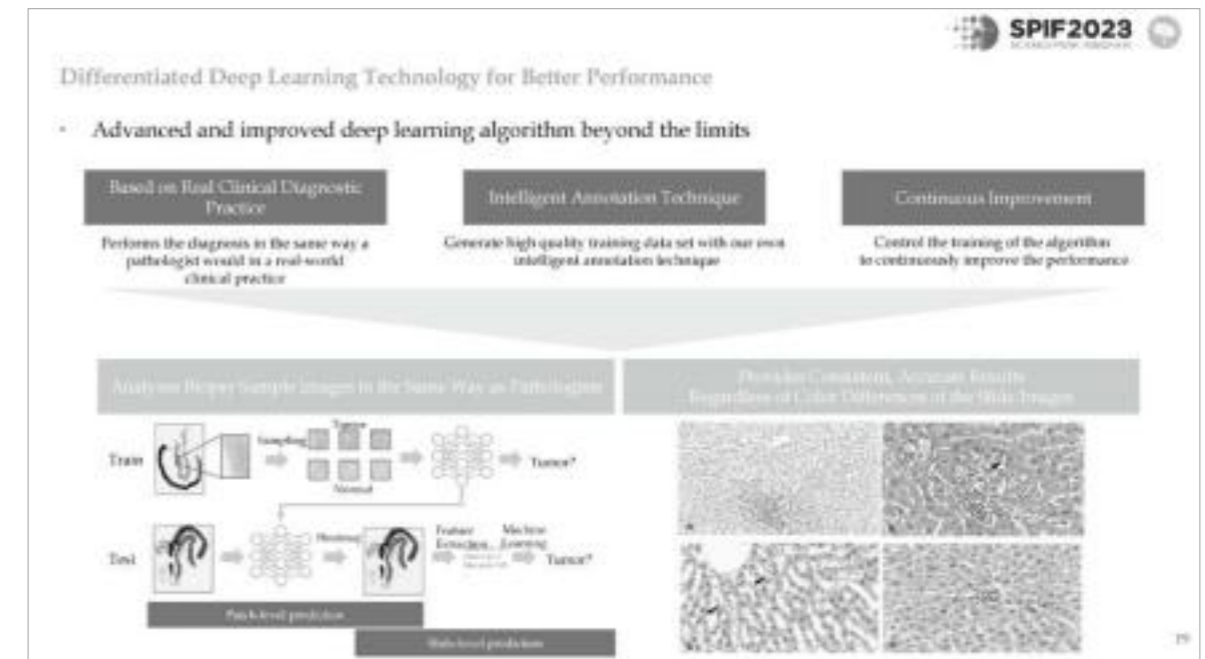

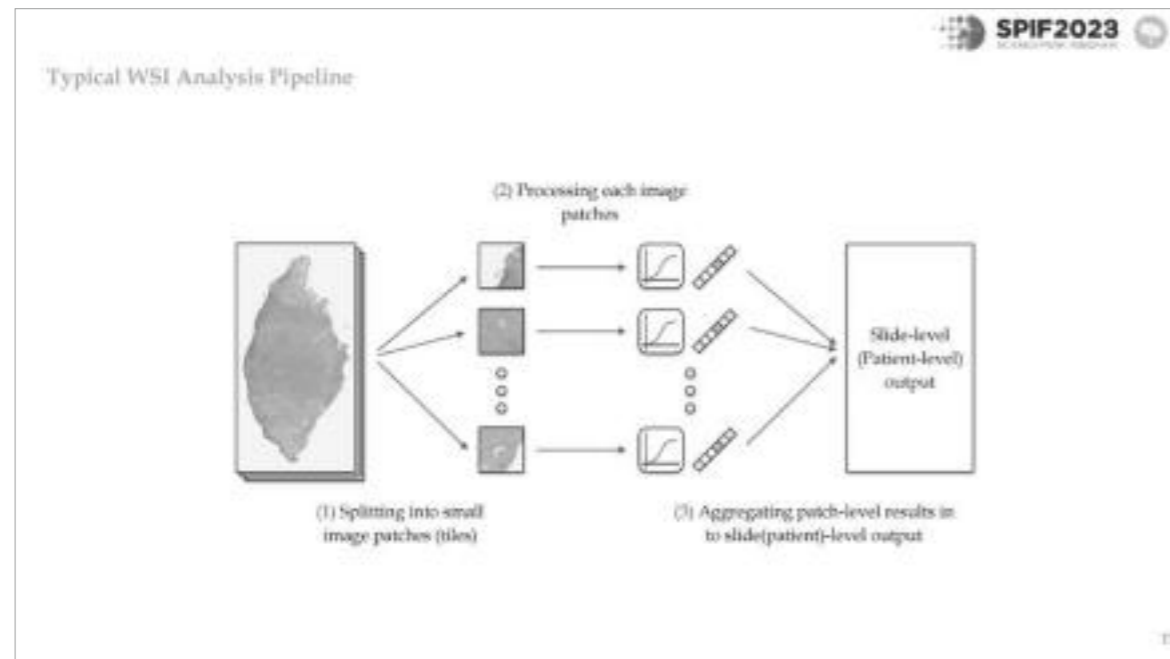

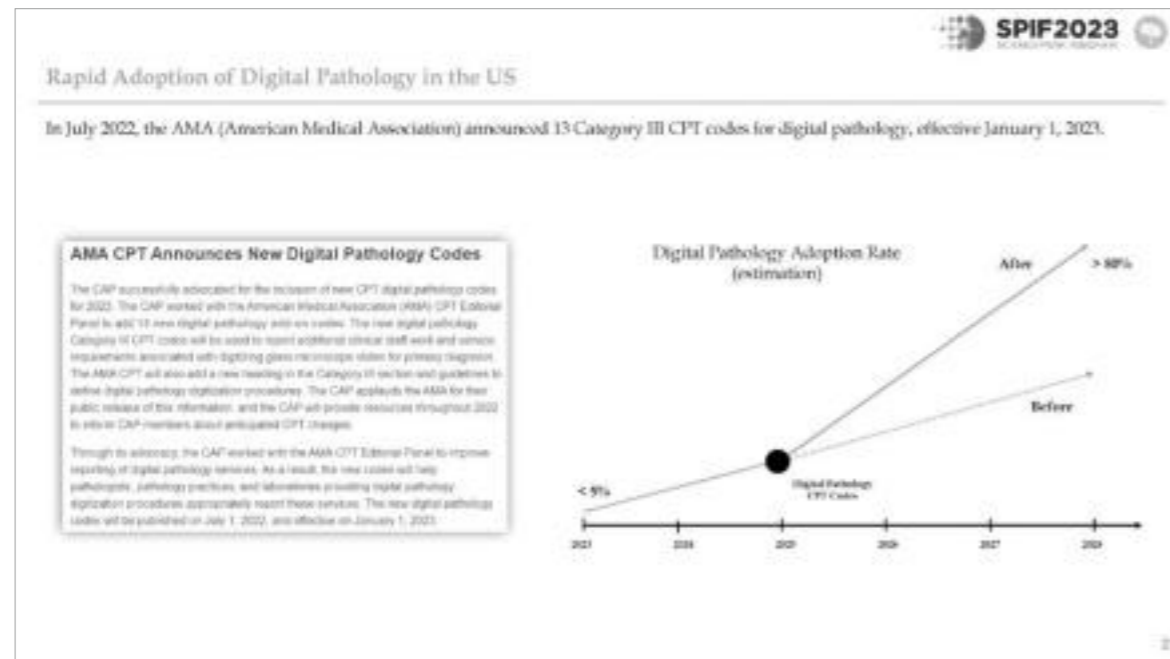

15

### Stain Normalization & Color Variation

16

**DeepDx® Prostate**  
Clinically-Validated AI for Prostate Core Needle Biopsy Tissue Image Analysis

**DeepDx® Prostate** Specification: Sensitivity 99%, Specificity 97%, AI result in 30 sec!

- Detects cancer and grades its severity on WSIs of prostate core needle biopsy samples, based on the Gleason scoring system.
- Use cases are extensive: first read, concurrent read, quality control, education and R&D.
- Extensively tested at a US CLIA lab (> 700k cores as between 2019 and 2021).
- Alleviates the shortage of pathologists and the general increases in workload.
- Reduces diagnostic subjectivity and variability.

1. Disclaimer: All products are for Research Use Only (RUO) or Investigational Use Only (IUO) and not for clinical primary diagnosis, unless indicated otherwise.

DeepDx – Prostate

**cancers** Title: Automated Gleason Scoring and Tumor Quantification in Prostate Core Needle Biopsy Images Using Deep Neural Networks and its Comparison with Pathologist-Based Assessment (Published in Cancers 2019, vol.11, no.12 (Nov. 25, 2019))

**Background**

- The Gleason score is a grading system widely used for evaluating prostate cancer tissues and is the standard for prognosis prediction and treatment selection.
- However, as the score is qualitative and subjective, it considerably varies with respect to inter- and intra-observer variability among pathologists.
- Recently, several attempts to apply deep learning to whole slide images (WSIs) diagnosis in prostate cancer have been made to detect prostate cancer and Gleason scoring using tissue microarrays (TMA), prostatectomy and core needle biopsy samples.
- In the paper, the researchers proposed automated Gleason scoring system for prostate core needle biopsy samples - DeepDx Prostate and evaluate its performance.

**Methods**

- A total of 1,831 hematoxylin and eosin (H&E) stained glass slides of prostate needle biopsy cores along with their original hospital diagnoses were collected from two hospitals (Korea University Guro Hospital, Hanyang University Medical Center).
- After anonymizing patient data, the slides were digitized using Aperio AT2 scanners (Leica Biosystems Inc.) at  $\times 40$  magnification, (i.e., resolution of 0.25  $\mu\text{m}/\text{pixel}$ ).
- After digitization, 700 images were selected for the validation set and balanced according to the grade groups reported in the original diagnosis. The remaining 1,131 cases were used for the discovery set.

DeepDx Prostate

Prostate Cancer AI Clinical Performance

Very common type of cancer in men

- Increasing number of newly diagnosed patients
- Well-established histologic grading guideline; inter-observer discrepancy ratio is high (~40%)
- Many research groups & companies developed AI-based prostate cancer diagnostics
- Top-notch algorithms present similar slide-level performance values
  - Cancer detection: AUC ~ 0.99
  - Histologic grading: Cohen's kappa ~ 0.6
- Regulation-cleared In-vitro diagnostic devices (IVDs) for prostate cancer
  - DeepDx-Prostate & DeepDx-Prostate Pro (Deep Bio Inc., Korea)
  - Paige Prostate (Paige.AI, US)

AI-assisted biopsy

High diagnostic concordance was shown between DeepDx® and the reference standard compared to the original hospital diagnosis: 0.907 quadratic-weighted Cohen's kappa coefficient

Deep learning algorithm can provide specialist-level support to pathologist

Deep learning algorithm can provide specialist-level support to pathologists

**cancers** Title: Automated Gleason Scoring and Tumor Quantification in Prostate Core Needle Biopsy Images Using Deep Neural Networks and its Comparison with Pathologist-Based Assessment (Published in Cancers 2019, vol.11, no.12 (Nov. 25, 2019))

The system-based diagnosis results were compared with reference standards derived from three certified pathologists.

**Results**

Kaplan-Deane Kappa	Reference Standard	Deep Learning Algorithm	Hospital Diagnosis
Reference Standard		0.615/0.907	0.524/0.870
Deep Learning Algorithm	0.615/0.907		0.440/0.811
Hospital Diagnosis	0.524/0.870	0.440/0.811	

High diagnostic concordance was shown between DeepDx® and the reference standard compared to the original hospital diagnosis: 0.907 quadratic-weighted Cohen's kappa coefficient

Deep learning algorithm can provide specialist-level support to pathologist

Figure 1: DeepDX - Prostate Pro. This figure illustrates the DeepDX Prostate Pro pipeline for prostate cancer detection and grading. The pipeline starts with 'Training' on a dataset of 10,000 prostate MRI slices, which are processed by a 'DeepDX Prostate Pro' model to produce 'Prostate cancer probability maps'. These maps are then used for 'Prostate cancer detection' and 'Prostate cancer grading'. The 'Prostate cancer detection' step involves a 'Prostate cancer probability map' and a 'Prostate cancer probability threshold' to produce a 'Prostate cancer probability map'. The 'Prostate cancer grading' step involves a 'Prostate cancer probability map' and a 'Prostate cancer probability threshold' to produce a 'Prostate cancer probability map'. The final output is a 'Prostate cancer probability map'.

## Converting Gleason Pattern Ratio Values into Prognostic Factors

Direct use of Gleason pattern rates as prostate cancer BCR (biochemical recurrence) predictor

- 3, 4, 5 rates - proportions of the cancerous tissue composed of Gleason patterns 3, 4 and 5, respectively.
- Modeled on TCGA-PRAD data
- Cox PH model used
- 5-fold cross validation output
- Confidence intervals by bootstrapping

	Point estimate	95% confidence intervals
C-index with ratios	<b>0.766</b>	[0.631, 0.800]
C-index without ratios	0.675	[0.588, 0.773]
Difference	0.091	[-0.032, 0.119]

## Applying to TURP (Transurethral resection of prostate) Tissue

TURP = typical treatment of BPH (Benign prostatic hyperplasia)

- Prostate cancer is found in 4.1–16.7% of TURP cases
- Unseen morphologies (bladder tissues, cauterization artifacts, etc.) require additional training

**SPIF2023**

[illegible]

Potential Utilization of Algorithm in Analyzing TURP WSIs

**USCAP** Title: Fine Tuning of Deep Neural Network(DNN) Trained on Prostate Needle Biopsies to Diagnose Transurethral Resection of Prostate Images (Poster presentation at USCAP 2021 Annual Meeting) **deepbio**

**Background**

- Incidental prostate cancer is reported in 4.1-46.7% in TURP cases
- In the very large tissue area of TURP, the proportion of the cancerous lesion area is very small. Such small cancerous area may be missed during microscopic diagnoses.
- In the previous study, the researchers reported an automatic diagnosis of TURP whole slide images (WSIs) by translationally applying a DNN model which was developed for the diagnosis of prostate needle biopsy.
- In this study, the researchers performed a fine tuning of DNNs using benign TURP and transurethral resection of bladder (TURB) WSIs to advance our model's performance.

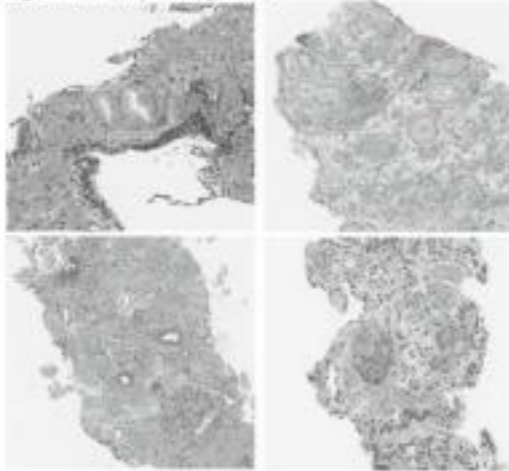

**Methods**

- A total of 3,098 hematoxylin and eosin (H&E) stained glass slides of TURP and 22 H&E stained glass slides of TURB were collected from Seoul National University Hospital.
- All slides were scanned using Aperio AT1 digital slide scanner (Leica Biosystems Imaging, Inc.)
- After digitization, 3,662 TURP WSIs (965 cases) were selected for the validation set. For the discovery set, 216 TURP WSIs and 22 TURB WSIs were used. Cases used for the discovery and the validation are independent.

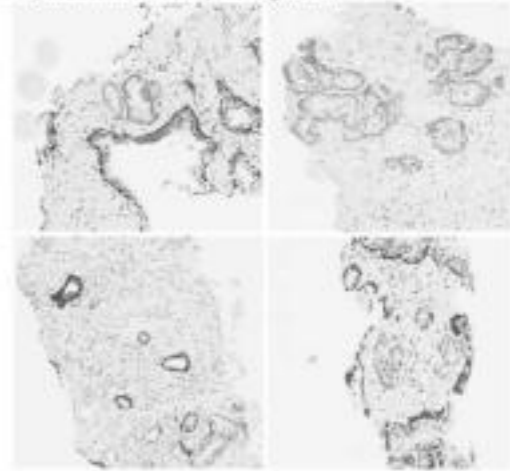

Assist with the cases: original diagnosis of the slide is benign, algorithm found cancerous regions

**Diagnostic Result by Our Algorithm**

**CK(Immunohistochemical) Staining Result**

**USCAP** Title: Fine Tuning of Deep Neural Network(DNN) Trained on Prostate Needle Biopsies to Diagnose Transurethral Resection of Prostate Images (Poster presentation at USCAP 2021 Annual Meeting) **deepbio**

**Results**

		Original Hospital Diagnosis (cases)		
		Cancer	Benign	Total
Deep Learning Algorithm	Cancer	52	29	81
	Benign	3	401	404
	Total	55	510	565

Evaluation Metric	Reference (slide)		
	Cancer	Benign	Total
Accuracy	90	85	87.5
Sensitivity	92	75	83.3
Specificity	90	100	95
F1 Score	91	87.5	89.3

In this study, the researchers focused on the weaknesses of the previous model which showed false positive detections for contamination and squaring artifacts of tissue periphery. Adding benign tissues in training, the performance of the model was significantly improved compared to the previous model. The algorithm's detection accuracy, sensitivity, and specificity were 94.3%, 94.5%, and 94.3% respectively.

Deep learning algorithm intended to diagnose prostate needle biopsy can be utilized in prostate cancer diagnosis based on TURP

AI Assisted Diagnosis Leads Better Productivity

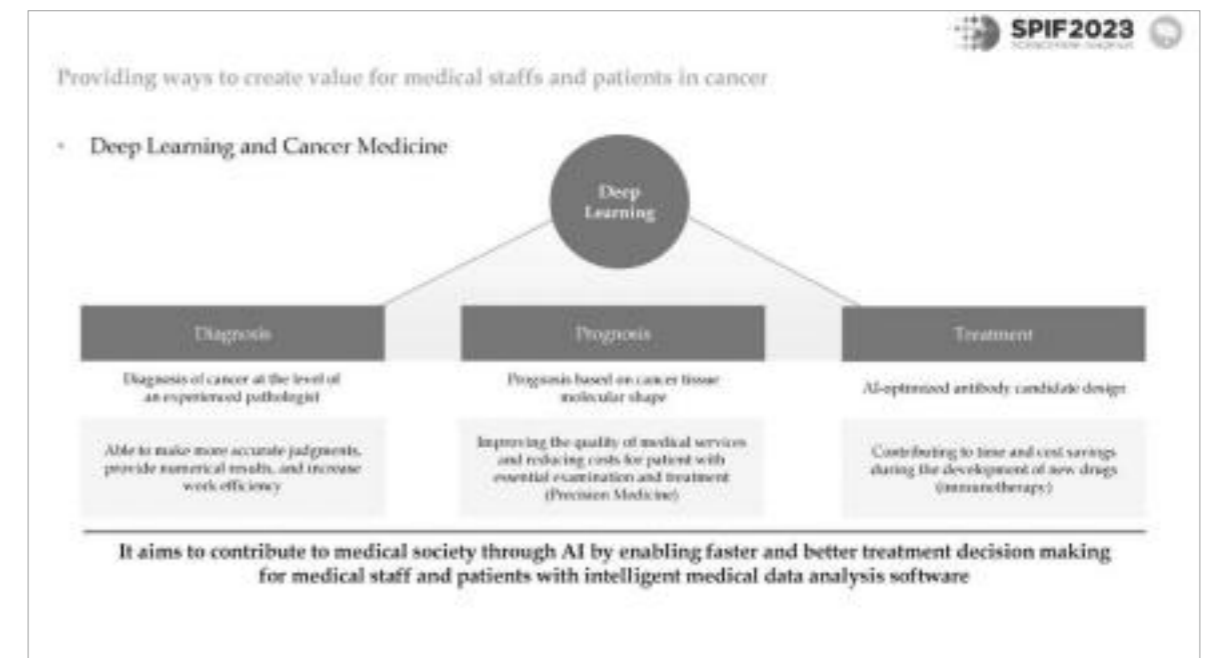

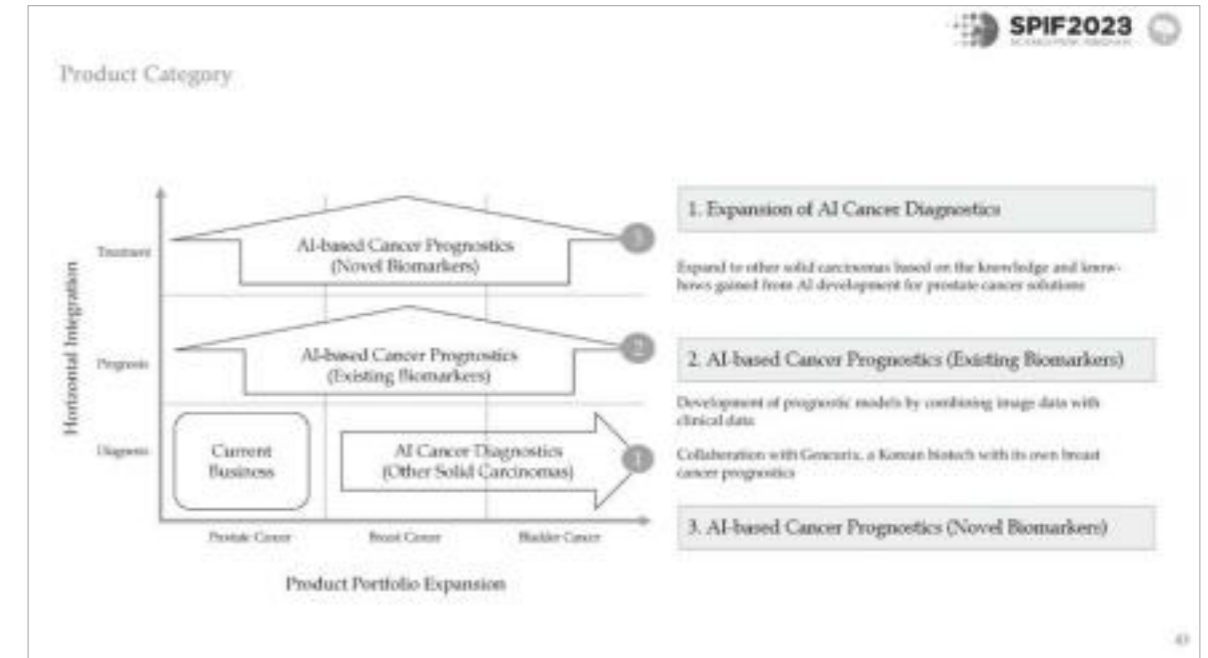

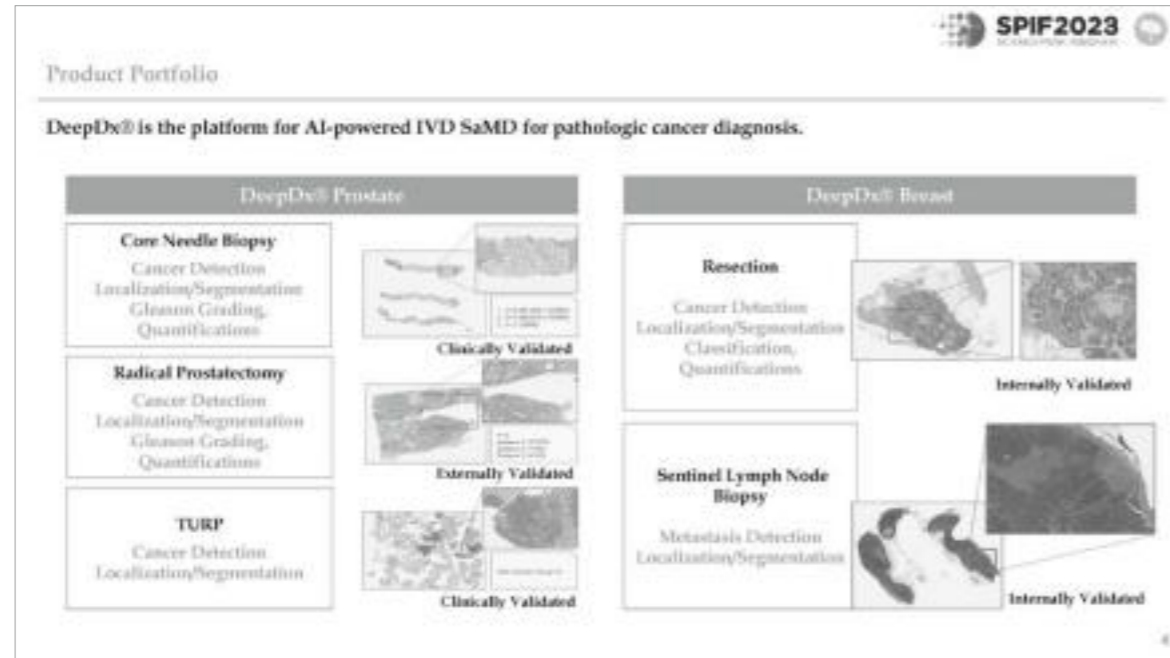

Time spent in diagnosis without deep learning aid vs with deep learning aid

	UT1	UT2
Time (sec / slide)	55.6	36.91

UT1: Diagnosis without deep learning algorithm. UT2: Diagnosis with deep learning algorithm.

Deep learning-powered algorithm empowers pathologists with faster diagnosis

### Abstract

## AI-based Farm Robility Market Strategy

Introducing the current state of farm mobility solution technology and market conditions that combine robots and mobility in agricultural fields amid changes and crises in global agriculture.

## 인공지능 기반 팜 로빌리티 시장 전략

글로벌 농업의 변화와 위기속에서 농업현장에 로봇과 모빌리티를 복합구현하는 팜 로빌리티 솔루션 기술 현황 및 시장상황을 소개함.

#### Pain Points

High pesticide exposure linked to olfactory impairment in U.S. farmers

- Hard Work
- Pesticide exposure
- Missing right time

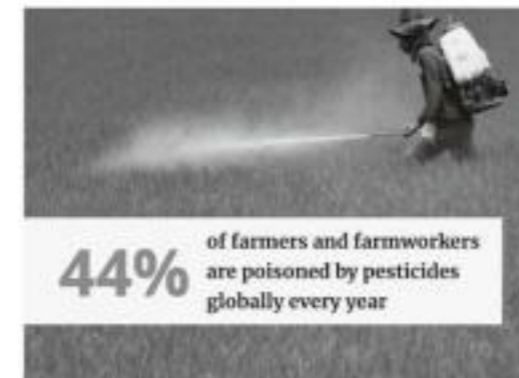

4

Infinyx

#### Pain Points

These pesticides are causing the unacceptable poisoning of those who produce our food, but also chronic health effects such as cancer  
- Rinder Schuler, coordinator of Pesticide Action Network (PAN) International

5

InFinyx

## Agriculture Drone

- Drones are innovative tools but limited in application
- Suitable for wheat or rice, but not for fruit trees

InFinyx

## Speed Sprayer

- Pesticide exposure is still a problem
- Rollover accident

InFinyx

## Speed Sprayer

InFinyx

## Cabin Type Speed Sprayer

- High price (20% more expensive)
- Need wide driving width (reduced cultivated area)

InFinyx

### AGV(Automated Guided Vehicle) / AMR(Autonomous Mobile Robot)

- Detect and move buried lines
- Incurring line disconnection and maintenance costs
- Farmers don't like it(burial work)

- No need for burial lines
- Need to learn various cultivation environment data
- RTK GPS -- significantly affected by obstacles (suitable for open filed, not orchard)

18

InFinyx

### Autonomous Speed Sprayer - Demo Video

19

InFinyx

### Autonomous Speed Sprayer - Demo Video

18

InFinyx

### Autonomous Speed Sprayer - Demo Video

19

Infinyx

### Autonomous Speed Sprayer

- NVIDIA Xavier NX
  - 8 Core CPU
  - Embedded GPU
  - RAM 6G
  - M2 SSD 128G
  - Ubuntu 18.04
- RGB-Depth Camera : Intel RealSense D455

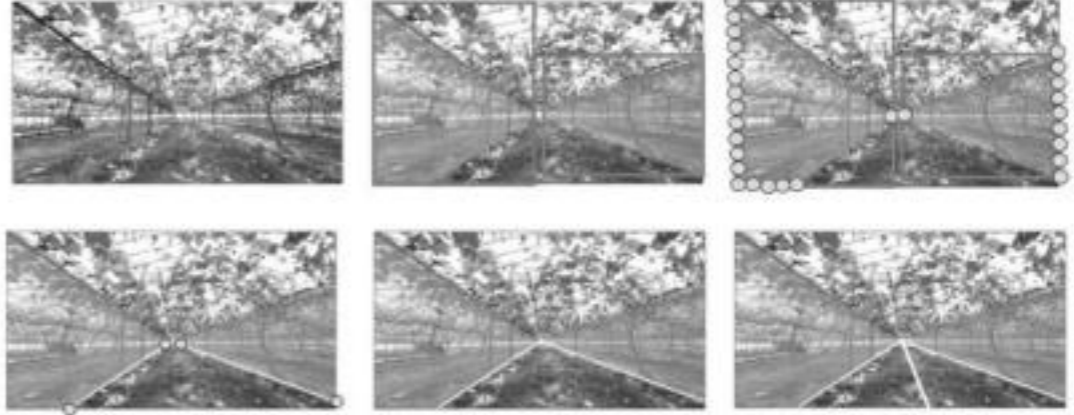

18

Infinyx

### Autonomous Speed Sprayer – Straight run

Necessary to recognize the driving route that reflects the various farming environments.

19

Infinyx

### Autonomous Speed Sprayer – Straight run

AI Recognizes the structure area on the left/right side of the floor, not on the farm floor.

20

Infinyx

### Autonomous Speed Sprayer – Dataset

Image data processing for driving route recognition.

21

### Autonomous Speed Sprayer - rotation

- In using RTK GPS, it is difficult to implement rotational driving at present (Inable to recognize the width of the rotation section)
- Environment variable such as driving width in the same farm as well as in each farm
- Rotational driving is possible only after sufficiently reflecting the physical characteristics and control conditions of mobility
- We have fully implemented rotational driving with AI

## Master Class 4 - Technology for a Healthy Life

### Mira Syahirah

Chief AI of Twistcode

건강한 기술, 건강한 삶의 방식  
Healthy Technology, Healthy Lifestyle

### BIOGRAPHY

Mira Syahirah joined Twistcode since 2017 with finance engineering as her background. From there, she rise spectacularly from fundamental of finance into artificial intelligence related finance technology since then. Now, she embarks and widen her journey into other verticals related to AI inclusive of healthcare, computer vision, manufacturing and engineering. Now she's leading the AI as a Chief AI at Twistcode.

### Abstract

## Healthy Technology, Healthy Lifestyle

Manufacturing and semiconductors' advancement produces a cheaper, more competitive rich-features product and services throughout cross-vertical in the industries worldwide. Whether these advancement is and was from military usage to space exploration's purposes, the research and advancement of the technology in this area is progressing in an extremely exponential mode – more competitions from various startups, small-medium enterprises, both from hardware manufacturers and software developers around the world hand-in-hand to create a standard, modular and scalable framework that can be used widely as much as possible, as affordable as possible to the masses. These efforts made the healthy lifestyle together with a healthy technology advancement, possible.

## 건강한 기술, 건강한 삶의 방식

제조 및 반도체의 발전은 전 세계 산업 전반에 걸쳐 더 저렴하고 경쟁력 있는 풍부한 기능의 제품 및 서비스를 생산합니다.

이러한 발전이 군사적 사용에서 우주 탐사 목적에 이르기까지 이 분야의 기술 연구 및 발전은 극도로 기하급수적으로 진행되고 있습니다.

다양한 신생 기업, 중소기업, 하드웨어 제조업체 및 소프트웨어 개발자 모두와의 경쟁이 치열해지고 있습니다.

대중에게 가능한 한 저렴하고 가능한 한 널리 사용될 수 있는 표준, 모듈식 및 확장 가능한 프레임워크를 만들기 위해 전 세계에서 협력하고 있습니다.

이러한 노력은 건강한 기술 발전과 함께 건강한 라이프스타일을 가능하게 했습니다.

**Saudi Arabia Inks Multiple MoUs with Malaysian Firms**

Saudi Arabia has secured a total of RM10 billion in investments from Saudi Arabia's Vision 2030, while other Malaysian firms signed MoUs with Saudi firms.

Saudi Arabia's investment, Vision 2030, is set to invest close to RM10 billion (RM10 billion) in nine Malaysian companies, says Prime Minister Ismail Sabri Pasol Sahri Yusoff.

During an MoU signing on Monday, he says the nine companies are from the semiconductor, social media, medical technology, defense and entertainment industries.

The companies are Tagging Technology Sdn Bhd, Amalytic Systems Sdn Bhd, National Aerospace and Defense Industries Sdn Bhd, Twistcode Technologies Sdn Bhd, CyberSecurity Malaysia, Malaysian Defence Research Centre Sdn Bhd (MADRC), Meta Systems Sdn Bhd, Light Up Sdn Bhd and My Events Sdn Bhd.

STP Model for the Development of Future Industry and STP's Role in the Region

### BIOGRAPHY

Yeong-Junaq Wang has been the President of Asian Science Park Association and Director General of Hsinchu Science Park Bureau, Hsinchu, Taiwan, ROC since 2016. Earlier he was the Director General of Central Taiwan Science Park Bureau from 2013 to 2016. Prior to science park management, he worked at Ministry of Science and Technology, and National Science Council as Director General of Department of Planning & Evaluation, and Director of Secretariat.

### Abstract

## STP Model for the Development of Future Industry and STP's Role in the Region

In recent years, the world has encountered severe challenges such as the pandemic, Ukraine-Russia war, severe inflation, and geopolitics conflict, whereas, the impact of the pandemic is long-lasting and irreversible. In the middle of political and economic turmoil, science and technology parks (STP) play a crucial role in maintaining the global industrial order and balancing the demand and supply of high-tech products. The successful development and business model of the science parks in the past has brought prosperity to the global technology industry. However, while facing the foreseeable challenges in the future, how the science parks keep pace with the changes in global environment turns out to be an important issue. Inspect status quo and challenges of high-tech industries nowadays, including restructuring of supply chain and redistribution of global production caused by pandemic, global economic competition and cooperation strengthened by rapid rise of emerging regional economies, the importance of sustainable development of

environment and energy, and together with the corresponding impacts and opportunities brought by aging population and declining birthrate. Hence, science parks have to rethink its own core value and vision and possess innovative thinking for the development of technology and economy based on innovation, inclusiveness, and sustainability in response to human's unmet needs in the future. Meanwhile, face up to the rise of emerging industry and continuously promote digital transformation and industrial upgrade. The science parks must envisage future scenarios and major issues and then connect related technical fields and industries to initiate a blueprint for future industry development, formulate development strategies and business models for emerging markets, and solve social problems. It can be foreseen that emerging industrial application fields such as smart life, health care, and sustainable security will be connected and developed by the three key technical fields including big data, artificial intelligence, and the Internet of Things. A brief description is as follows: 1. "Smart life" covers areas such as smart manufacturing and digital economy, and its derivatives including digital technology industry and related integrated applications. 2. "Health care" covers areas such as biotechnology and medical care, human-oriented technology that improves quality of life, food and food safety, etc., and its derivatives including industries of medicine, digital medical care, health management, and new agriculture. 3. "Sustainable safety" covers areas such as circular economy, net-zero emissions, and environmental and biological governance, and its derivatives including industries of green energy, energy conservation and environmental protection and other applications. Facing future social and environmental impacts and industrial changes, science parks not only act as the management operators and service providers, but also play crucial roles in driving regional innovation with the goal of establishing a sustainable social mechanism and economic system. Thus, the importance of future science park development is manifested in the following four aspects: first, cross-domain integration is to merge cooperation among different industries, guiding industrial innovation and transformation; second, trust network formulation is to integrate industries, governments, academic institutions, and R&D parties, and promoting inter-regional cooperation by a multi-party mechanism; third, solidifying a driving force for innovation via digital platforms or virtual communities, and further forming an environment for cultivating new technologies and stimulating industrial innovation; last, being the role player of integration and distribution of local resources to strengthen inter-regional sharing of resources and information, and eventually maximizing the efficiency of existing resources through virtual and real integration.

## Abstract

## 미래 산업 육성을 위한 사이언스파크 모델과 지역에서 사이언스파크의 역할

최근 몇 년 동안 세계는 코로나 19, 우크라이나-러시아 전쟁, 심각한 인플레이션, 지정학적 갈등과 같은 심각한 문제에 직면했지만 코로나19의 영향은 오래 지속되고 돌이킬 수 없습니다. 정치 및 경제 혼란 속에서 사이언스 파크(STP)는 세계 산업 질서를 유지하고 첨단 제품의 수요와 공급의 균형을 유지하는 데 중요한 역할을 합니다. 과거 사이언스 파크의 성공적인 개발과 비즈니스 모델은 글로벌 기술 산업의 번영을 가져왔습니다. 그러나 앞으로 예상되는 도전과제에 직면하면서 사이언스 파크가 지구환경의 변화에 어떻게 보조를 맞추느냐가 중요한 문제임이 드러난다.

인구 고령화와 출산율 감소와 함께 코로나 19로 인한 공급망 구조 조정 및 글로벌 생산 재분배, 신흥 지역 경제의 급속한 부상으로 강화된 글로벌 경제 경쟁 및 협력, 환경 및 에너지의 지속 가능한 개발의 중요성과 같은 오늘날 첨단 산업의 현 실태 및 앞으로의 과제들이 존재합니다. 따라서 사이언스파크는 미래 인간의 미충족 니즈에 대응하여 혁신, 포용, 지속가능성을 바탕으로 기술과 경제의 발전을 위한 혁신적 사고와 핵심가치와 비전을 재고해야 합니다. 한편, 신흥 산업의 부상에 직면하고 디지털 전환과 산업 업그레이드를 지속적으로 촉진합니다.

사이언스 파크는 미래 시나리오와 주요 이슈를 예측하고 관련 기술 분야와 산업을 연결하여 미래 산업 발전을 위한 청사진을 제시하고 신흥 시장에 대한 개발 전략과 비즈니스 모델을 수립하며 사회 문제를 해결해야 합니다. 빅데이터, 인공지능, 사물인터넷 등 3대 핵심 기술 분야로 스마트 라이프, 헬스케어, 지속가능한 보안 등 새롭게 부상하는 산업 응용 분야가 연결되고 발전할 것을 예견할 수 있습니다. 간략한 설명은 다음과 같습니다.

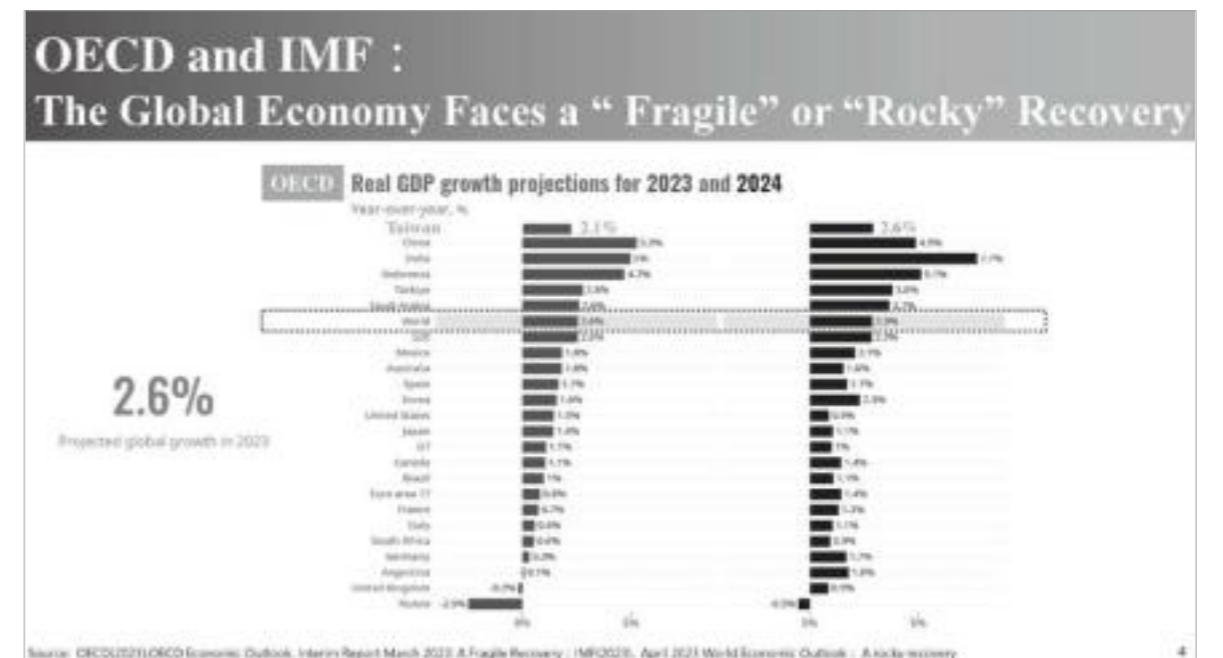

1. "스마트 라이프"는 스마트 제조 및 디지털 경제와 같은 영역과 디지털 기술 산업 및 관련 통합 응용 프로그램을 포함한 파생 상품을 포함합니다.
2. "헬스케어"라 함은 생명공학 및 의료, 삶의 질을 향상시키는 인간중심기술, 식품 및 식품안전 등의 분야와 그 파생산업인 의약, 디지털의료, 건강관리, 신 농업 등을 말한다.
3. "지속 가능한 안전"은 순환 경제, 넷 제로 배출, 환경 및 생물학적 거버넌스와 같은 영역과 녹색 에너지 산업, 에너지 절약 및 환경 보호 및 기타 응용 분야를 포함한 파생물을 포함합니다.

미래의 사회적, 환경적 영향과 산업 변화에 직면한 사이언스 파크는 관리 운영자 및 서비스 제공자 역할을 할 뿐만 아니라 지속 가능한 사회 메커니즘 및 경제 시스템 구축을 목표로 지역 혁신을 주도하는 데 중요한 역할을 합니다. 따라서 미래 사이언스 파크 개발의 중요성은 다음과 같은 네 가지 측면에서 드러난다.

첫째, 도메인 간 통합은 서로 다른 산업 간의 협력을 병합하여 산업 혁신과 변화를 유도하는 것입니다. 둘째, 신뢰 네트워크 형성은 산업, 정부, 학술 기관 및 R&D 당사자를 통합하고 다자간 메커니즘을 통해 지역 간 협력을 촉진하는 것입니다.

셋째, 디지털 플랫폼이나 가상 커뮤니티를 통해 혁신의 동력을 공고히 하고, 나아가 신기술 육성 및 산업혁신 촉진을 위한 환경을 조성합니다.

마지막으로 지역 자원의 통합과 배분의 역할 주체가 되어 지역 간 자원과 정보의 공유를 강화하고 궁극적으로 가상과 현실의 통합을 통해 기존 자원의 효율성을 극대화합니다.

## Trade War and Pandemic to Accelerate Global Supply Chain Restructuring

Nearly 80% of supply chain leaders say their digital transformation has accelerated due to the pandemic.

Source: MHI and Deloitte(2022). Evolution to Revolution: Building the Supply Chains of Tomorrow

## Roland Berger : Megatrend in 2050 (global megatrends)

<b>1</b> Population and Society	<ul style="list-style-type: none"> <li>Population: There will be more of us, older, and more urban but dynamics are very different worldwide.</li> <li>Migrations: people migrate within and between countries – voluntarily and forced.</li> <li>Values: A complex issue in our increasingly diverse societies – but fundamental to our coexistence.</li> <li>Education: More and more people are getting access to good education – the key to social advancement as well as economic growth.</li> </ul>	<b>4</b> Economics & Business	<ul style="list-style-type: none"> <li>Revolving globalization: A new, slower phase of globalization lies ahead.</li> <li>Power shift: Economic power is shifting further toward emerging countries. By 2050, Asia is expected to generate half of global GDP.</li> <li>Second industrialization: Digitalization, sustainability and socio-demographic factors drive industries to transform.</li> <li>Debt challenge: The increase of public and private debt levels raises a lot of questions for the future.</li> </ul>
<b>2</b> Health & Care	<ul style="list-style-type: none"> <li>Pandemics and other challenges: It wasn't the first nor the last – but other important health challenges are rising to the top of the global agenda.</li> <li>Diseases &amp; Treatment: From cells to systems – our concept of health goes beyond the mere absence of disease.</li> <li>Caring: An aging society and its increasing need for care.</li> </ul>	<b>5</b> Technology & Innovation	<ul style="list-style-type: none"> <li>Value of innovation: Innovation is the key to sustainable growth.</li> <li>Technologies of the future: A whole bundle of new technologies will shape the time until 2050.</li> <li>Humans and machines: As machines become more intelligent, the relationship between humans and machines needs to be re-discussed.</li> </ul>
<b>3</b> Environment & Resources	<ul style="list-style-type: none"> <li>Climate change and pollution: All eyes are on CO2 emissions and keeping global warming contained. ## 2050 Net Zero Carbon Emission Is a Big Challenge after the Pandemic

International governments and global brands are accelerating net-zero actions

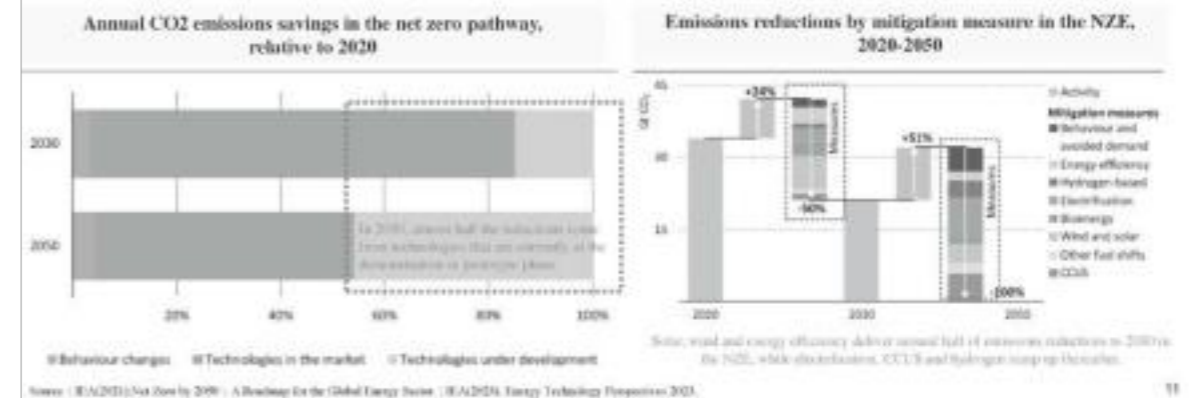

Source: Standard Chartered(2021): Carbon Data <https://www.sc.com/en/insights/carbon-data/>

## 2 Emerging Trends and Opportunities in Future Industry Development

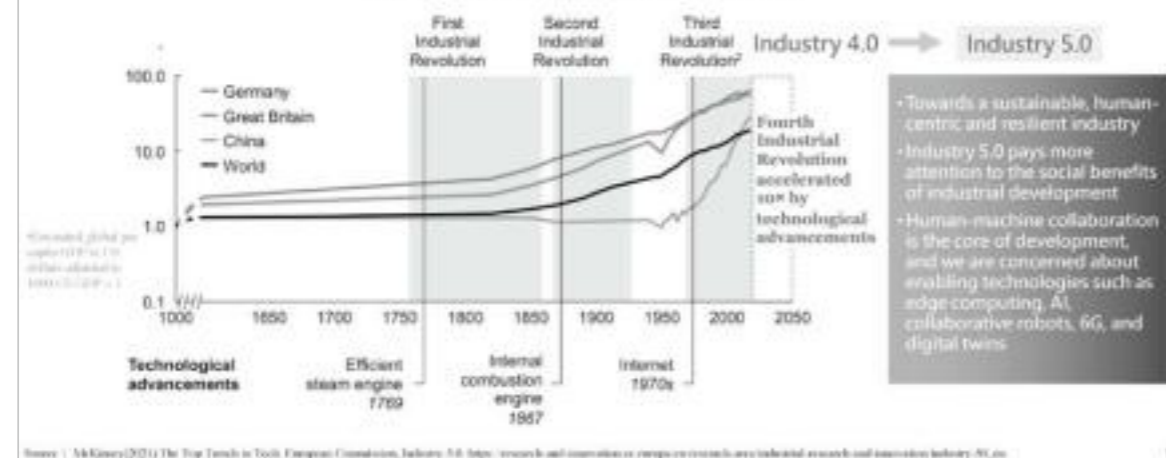

## Net Zero by 2050 Requires Huge Leaps in Clean Energy Innovation

\*There is a global market opportunity for key mass-manufactured clean energy technologies worth around USD 650 billion a year by 2030 – more than three times today's level – if countries worldwide fully implement their announced energy and climate pledges.

## The Era of “Acceleration of Technological Progress”

The next decades promise to be a time in which technologies progress ever-more quickly from before

## Net Zero by 2050 Requires Huge Leaps in Clean Energy Innovation

- The key pillars of decarbonization of the global energy system are energy efficiency, behavioral changes, electrification, renewables, hydrogen and hydrogen-based fuels, bioenergy and CCUS.
- Net zero by 2050 hinges on an unprecedented clean technology push to 2030.
- In 2050, almost half the reductions come from technologies that are currently at the demonstration or prototype phase.
- The biggest innovation opportunities concern advanced batteries, hydrogen electrolyzers, and direct air capture and storage.
- Reaching net zero by 2050 requires further rapid deployment of available technologies as well as widespread use of technologies that are not on the market yet.
- Clean energy innovation must accelerate rapidly, with governments putting R&D, demonstration and deployment at the core of energy and climate policy.

## McKinsey Technology Trends Outlook 2022(1/2)

1. Advanced connectivity	2. Applied AI	3. Cloud and edge computing	4. Immersive-reality technologies
• Optical fiber, 5G/6G, Low-power & wide-area (LPWA) networks, Wi-Fi 6, low-Earth-orbit(LEO) satellites	• Machine learning, Computer vision, Natural-language processing, Deep reinforcement learning, Knowledge graphs	• Data centre, Edge device, Networking infrastructure, IoT	• Spatial computing, AR, VR, MR, 3D sensor, On-body and off-body sensors, Haptics, Location services
5. Industrializing machine learning	6. Next-generation software development	7. Quantum technologies	8. Trust architectures and digital identity
• Data management, Model development, Model deployment, Live-model operations, Integrated hardware, Heterogeneous computing	• Low-code and no-code platforms, Infrastructure as code, Microservices, AI pair programmer, AI-based testing, Automated code review	• Quantum computing, Quantum communications, Quantum sensing	• Zero-trust architecture (ZTA), Digital identity, Privacy engineering, Explainable AI (XAI)
9. Web3	10. Bioengineering	11. Clean energy	12. Mobility
• Blockchain, Smart contracts, Digital assets	• Tissue engineering, Biomaterials, Organ printing, Circularity, Gene editing, CRISPR, Synthetic biology, Carbon capture, use, and storage, Carbon removal	• Solar photovoltaics, Low-wind-speed onshore and offshore generation, Hydrogen, Electrolyzers, Long-duration energy storage, Smart grid	• Autonomous, Connected-vehicle technologies, Electrification technologies, Smart-mobility solutions, Lightweight technologies, Value-chain decarbonization
13. Space technologies	14. Sustainable consumption		
• Satellites, Launchers, and Habitation technologies initiative	• Sustainable agriculture and alternative proteins, Circular technologies, Green construction, Carbon capture, use, and storage, Carbon removal

## 3 | Operation Overview, Development Models, and Local Roles of Science Parks in Future Industry Development

### •Future industry...

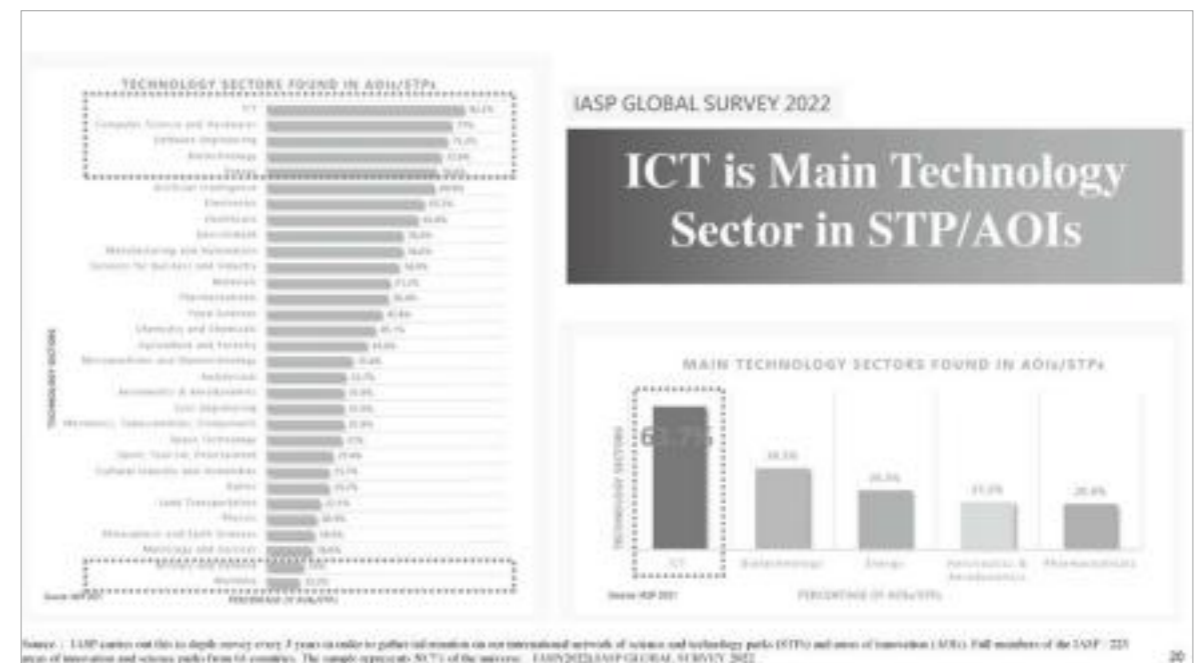

Based on social demands, future industry development lies in breakthrough and transformation of current industry technologies via innovative ideas.

### •STPs...

The key characteristics, needs or pain points of future industrial development will be the opportunity to explore the development model of the new generation STP and its innovation role in local.

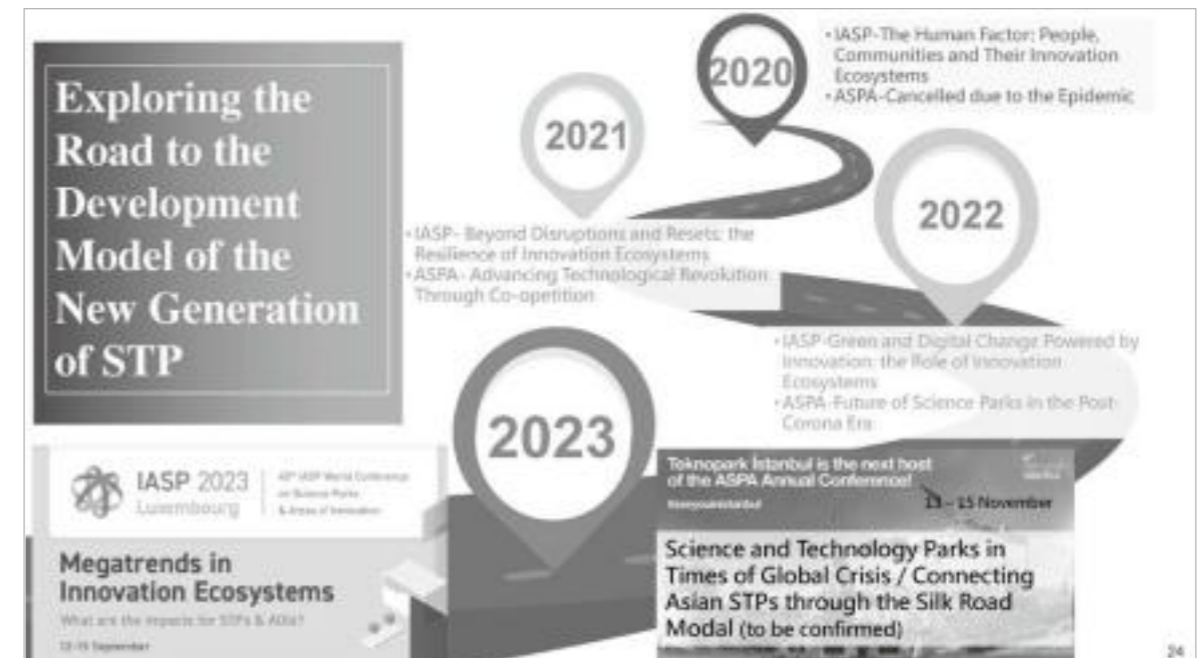

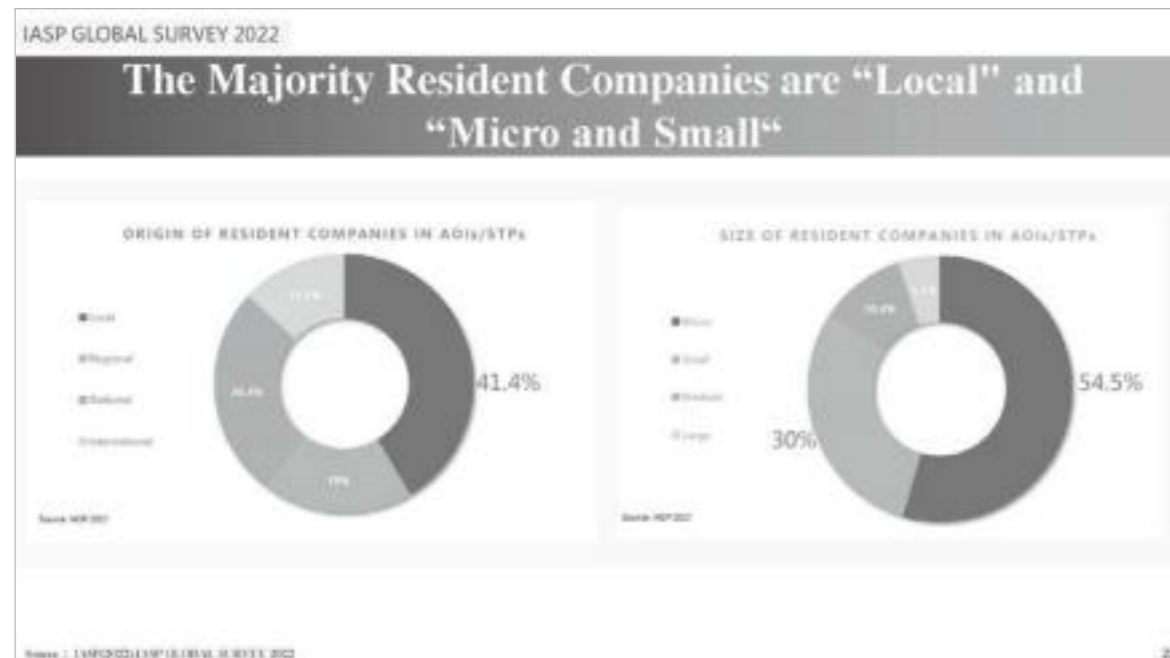

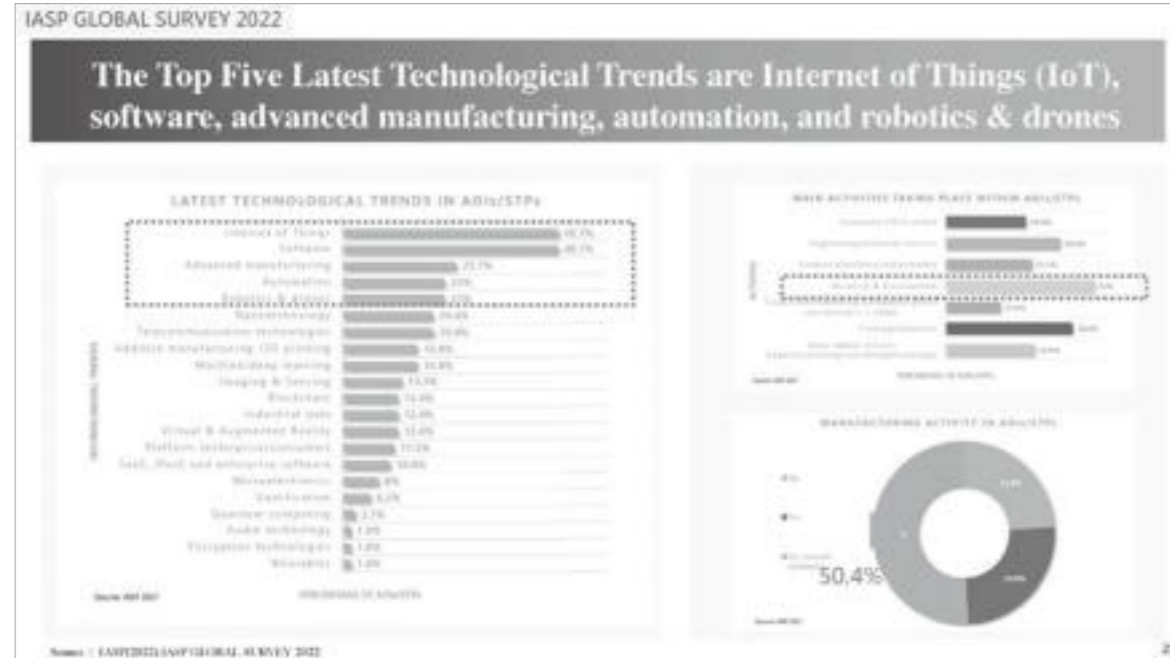

18

Source : IASP customised data to depth survey every 3 years in order to gather information on the international network of science and technology parks (STPs) and areas of innovation (AOIs). Full members of the IASP/223 areas of innovation and science parks from 64 countries. The sample represents 50.7% of the network. IASP/2022/IASP GLOBAL SURVEY 2022

20

## Key Points of Development Model of New Generation STP

	Traditional Paradigm	New Paradigm
<b>Innovation Drive</b>	• Future industries from "linear innovation" model	• Future industries from "non-linear innovation" model
<b>Development Positioning</b>	• STPs serve as a bridge for the transfer of technology between industry and academia, promoting R&D	• STPs attach greater importance to "people-oriented", and serve as accelerators of social change
<b>Development Planning</b>	• Geographically located around the university. • Establishment of scientific research institutions in the suburbs of cities to converge on new urban sites. • Build a science city by gathering scientific research institutions in the suburbs of cities	• Continue to be close to universities and tend to be urban areas. • Pay more attention to creating a common living area and natural ecology in the area and construction planning leads to sustainable (e.g. SDGs, ESGs, intelligent development) • Explore the "Virtual Park"
<b>Operations Management</b>	• Land and management rights are dominated by universities, central or local governments	• Development and operation of expanded public-private partnerships (PPP), such as joint ventures, outsourcing, franchises • Enhancement of digital management and service capabilities of STPs operations Team
<b>Innovative Services</b>	• Single window administrative services, rent-only no-sale model, etc.	• Building the ecosystem of innovation and entrepreneurship, such as incubators, accelerators, community building, office sharing, financial technology services, etc. • Establishment of Innovative Testbeds to provide new technological experiments, testing, demonstration such as test platform, pilot plant, living lab, regulatory sandbox, and so on

## Sciencepark Forum 1 - STP Model for the Development of Future Industry and STP's Role in the Region

### Janekrshna Kanatharana

Executive Vice President of National Science and Technology Development Agency (NSTDA)

태국의 STP 모델: 개발 목표에 대한 다양한 대응

STP Models in Thailand: A Variety in Response to the Development Objectives

### BIOGRAPHY

Dr. Kanatharana has been involved with STP development in Thailand ever since he joined the National Science and Technology Development Agency (NSTDA) in 2004. He held the position of the Director of Thailand Science Park during 2004-2017 and then became the founding Executive Director of the Eastern Economic Corridor of Innovation (EECI) during 2019 – early 2023. In addition, He was engaged in the early phase development of the so-called regional science parks in Thailand and was instrumental in the setup of Thai Business Incubators and Science Parks Association (Thai-BISPA). In 2010, He was elected as the Asia Pacific President of the International Association of Science Parks and Areas of Innovation (IASP) and finished his term in 2012.

Currently, he is the Executive Vice President of NSTDA for Industry and Community Engagement. The Thailand Science Park, the Software Park Thailand, the Food Innopolis are within the span of his responsibility.

### Abstract

## STP Models in Thailand: A Variety in Response to the Development Objectives

STP development in Thailand rooted back to the 1980's when the Thai Cabinet approved the conceptual study of science park development that subsequently led to the development of the Thailand Science Park (TSP). TSP, the first science park in Thailand, is under the management of the National Science and Technology Development Agency (NSTDA) and is located at the northern outskirts of Bangkok on a land plot connected to 2 major universities: Thammasat University and the Asian Institute of Technology. The focuses of TSP are to develop a hub of research and development for both the public and private sectors as well as being a hub of science and technology personnel development. As TSP is maturing with over 150 tenant companies of which one-thirds are international

## 태국의 STP 모델: 개발 목표에 대한 다양한 대응

태국의 STP 개발은 1980년대 태국 내각이 사이언스 파크 개발에 대한 개념 연구를 승인하여 이후 태국 사이언스 파크(TSP) 개발로 이어진 때로 거슬러 올라갑니다.

태국 최초의 사이언스 파크인 TSP는 NSTDA(National Science and Technology Development Agency)의 관리를 받고 있으며 방콕 북쪽 외곽에 위치한 2개의 주요 대학인 Thammasat University와 Asian Institute of Technology. TSP의 초점은 공공 및 민간 부문 모두를 위한 연구 개발 허브를 개발하고 과학 및 기술 인력 개발의 허브가 되는 것입니다.

TSP는 1/3이 해외기업인 150개 이상의 입주기업과 입주기업 및 NSTDA, 산하기관 국가연구기관에서 상근인원 4,000여 명과 함께 성숙기에 접어들고 있어 식품특구 및 지류발전의 발판이 되고 있습니다.

EECI 개발을 위한 엔진. Food Innopolis와 EECi는 강연에서 다뤄질 예정입니다.

### Abstract

#### Innovation of Daegu Technopark for Future Industry Development

During the period of rapid growth in Korea in the 1960s and 1970s, Daegu led the growth of the national economy as one of the three largest cities in Korea as peripheral industries such as machinery and parts centered on the textile industry. However, since the mid-1970s, Korea's main industry has shifted to heavy chemical industry, and as China entered the world economy in the 1980s, the labor-intensive textile industry was pushed out of competition with China and other developing countries. Thanks to the remarkable development of the automobile industry, including Hyundai Motor Company, in the 2000s, the automobile parts industry replaced the textile industry

and grew into a new representative industry in Daegu. However, it is difficult to create high added value only by supplying parts rather than producing finished cars, and parts companies that inevitably depend on finished car makers have limitations in growth. For the past decade, Daegu has had the stigma of being a local government with the lowest GRDP per capita. To address this, extensive industrial structural reform was desperately needed. Over the past 20 years, Daegu's leaders have become mayors by expressing their aspirations to foster future high-tech industries. However, the results were not very good. With the inauguration of Mayor Hong Joon-pyo last year, Daegu Metropolitan City decided to foster a new future industry and build a large-scale new airport in the region as an infrastructure for this purpose. The goal is to open an airport that handles about 30% of Incheon Airport's air logistics, provides direct flights to the US and Europe, and can be operated 24 hours a day by 2030. In addition, an ambitious plan was presented to attract a large number of high-tech industries that require export and import through air logistics to the region by creating a high-tech industrial complex and logistics complex with a population of 200,000 behind the airport. In line with this, Daegu Technopark is accelerating the fostering of Daegu's five future industries (ABB, semiconductor, healthcare, UAM, and robots) through preemptive industrial policy analysis and planning together with local governments and local innovative organizations. In particular, we are making great efforts to develop the ICT industry based on AI, big data, and blockchain technologies and to establish a manufacturing innovation ecosystem through digital transformation centered on ABB technology. Established in 1998, Daegu Technopark is faithfully fulfilling its role as a base institution for fostering future new industries in line with the innovation direction of the 8th civil election launched last year. In particular, by integrating the policy planning group and corporate support group for the first time among 19 techno parks nationwide, planning and execution functions were more organically connected, and a foundation for more effective corporate support was laid. In order to foster ABB-related industries in earnest, we established the ICT Industry Headquarters. In particular, to foster the ABB industry, we select 50 innovative ABB companies, centered on Dongdaegu Venture Valley and Suseong Alpha City, to nurture leading companies, while supporting ABB fund creation and technology certification through test beds. In addition, in order to apply ABB technology to the manufacturing industry and create a model for large-scale manufacturing innovation, local governments are promoting the 'Powerful ABB Factory Project' for the first time. From technology development support to marketing through the establishment of a commercialization support system for the entire life cycle of the company, local start-up companies from pre-star companies to world-class companies and mid-sized companies through a scale-up fostering strategy is unfolding. The 'star company fostering project' that Daegu Technopark has been carrying out for over 16 years has recently spread to a nationwide project and has achieved great results, such as being recognized as an exemplary case by the government. In addition, we support joint technology development with local companies by securing government projects, and contribute to mutual development between countries and overseas expansion of local companies through official development assistance (ODA) projects. Daegu Technopark will continue to play its role as an innovative institution that leads the revitalization of the local economy centered on corporate growth in line with the industrial development policy of Daegu Metropolitan City.

## Abstract

### 미래산업육성을 위한 대구테크노파크의 혁신

대구 1960~1970년대 대한민국 고도성장 시기에 섬유산업을 중심으로 기계, 부품 등 주변산업이 함께 발전하면서 대한민국의 3대 도시로서 국가경제 성장을 이끌었습니다.

그러나 1970년대 중반 이후 대한민국의 주력산업이 중화학공업으로 전환하고, 1980년대 들어 중국이 세계경제에 진입하면서 노동집약적인 섬유산업은 중국 등 개발도상국들과의 경쟁에서 밀려나게 되었습니다.

현대자동차 등 자동차산업의 눈부신 발전에 힘입어 2000년대에는 자동차부품 산업이 섬유산업을 대신하여 대구의 새로운 대표 산업으로 성장하였습니다. 하지만 완성차 생산이 아닌 부품 공급 만으로는 높은 부가가치를 창출하기 어렵고, 완성차 메이커에 의존적일 수 밖에 없는 부품기업은 성장에 한계가 있어 지난 십 수년 동안 대구는 1인당 GRDP가 가장 낮은 지방정부라는 오명을 가지고 있습니다.

이를 해소하기 위한 대대적인 산업구조 개혁이 절실했습니다. 지난 20년 동안 대구의 지도자들은 미래 첨단산업을 육성하겠다는 포부를 밝히면서 시장이 되었습니다. 하지만 결과는 그리 좋지 않았습니다.

지난 해 홍준표 시장이 취임하면서 대구광역시는 새로운 미래산업을 육성하기로 하고, 이를 위한 기반시설로 지역에 대규모 신공항을 건설하기로 했습니다.

인천공항 항공물류의 약 30%를 처리하고, 미국과 유럽으로 직항 노선을 취항할 수 있는, 그리고 24시간 운영할 수 있는 공항을 2030년까지 개항하겠다는 목표입니다.

또한 공항 배후에는 인구 20만명 규모의 첨단산업단지 및 물류단지를 조성하여, 항공물류를 통한 수출입이 필수적인 첨단산업을 지역에 대거 유치하겠다는 야심찬 계획도 제시하였습니다.

이에 발맞추어 대구테크노파크는 지방정부와 지역의 혁신기관들과 함께 선제적인 산업 정책분석 및 기획을 통해 대구 5대 미래산업(ABB, 반도체, 헬스케어, UAM, 로봇) 육성에 박차를 가하고 있습니다. 특히 AI, 빅데이터, 블록체인 기술을 기반으로 한 ICT 산업 발전과 ABB기술 중심의 디지털 전환을 통한 제조혁신 생태계 구축에도 많은 노력을 기울이고 있습니다.

1998년 설립한 대구테크노파크는 지난 해 출범한 민선8기 시정의 혁신 방향과 발맞추어 미래신산업 육성의 거점기관으로 충실하게 역할을 수행하고 있습니다.

특히 전국 19개 테크노파크 중 최초로 정책기획단과 기업지원단을 통합함으로써 기획과 실행기능을 더욱 유기적으로 연결하고, 보다 효과적으로 기업지원을 할 수 있는 기반을 마련하였습니다.

ABB 관련 산업을 본격적으로 육성하기 위하여 ICT산업본부를 신설하였습니다.

특히 ABB 산업 육성을 위해서 동대구벤처밸리와 수성알파시티를 중심으로 ABB 혁신기업 50개사를 선발하여 리딩기업을 육성하는 한편, ABB 펀드조성과 테스트베드 통한 기술인증 등을 지원하고 있습니다.

또한 제조업에 ABB 기술을 적용하여 대구형 제조혁신의 모델을 만들기 위해서 지방정부 최초로 '파워풀 ABB 팩토리 사업'을 추진하고 있습니다.

기업 생애 전주기 사업화 지원체계 구축을 통해 기술개발 지원부터 마케팅까지 지역의 창업기업들이 Pre-스타기업에서 스타기업을 거쳐 월드클래스기업, 중견기업에 이르기까지의 기업 성장사다리 체계를 통한 스케일업 육성전략을 펼쳐나가고 있습니다.

대구테크노파크가 16년 넘게 수행해 온 '스타기업 육성 사업'은 최근 전국적인 사업으로 확산되었고, 정부로부터 모범사례로 인정받는 등 큰 성과를 거두었습니다.

이밖에도 국비사업 확보를 통해 지역기업과 공동기술개발을 지원하고 있으며, 공적개발원조(ODA) 사업을 통해 국가간 상호발전과 지역기업의 해외진출에도 기여하고 있습니다.

앞으로도 대구테크노파크는 대구광역시의 산업육성 정책에 발맞춰 기업성장 중심의 지역경제 활성화를 주도하는 혁신기관으로서의 역할을 다하겠습니다.

- » Master in Project Management of RMIT University.
- » Former Vice Chairman of the People's Council of District 2, HCMC (**2019 – 2021**).
- » Former Vice Chairman of the People's Committee of District 2, HCMC (**2016 – 2019**).

### Abstract

## Role of Saigon Hi-Tech Park in Fostering the Hi-tech Industry in Vietnam

Saigon High-Tech Park (SHTP) was established in 2002 by the decision of the Prime Minister of Vietnam government. SHTP is located in Ho Chi Minh City and covers an area of 913 hectares with the aim of fostering the development of high-tech industries and promoting innovation and creativity in the region. The park is home to more than 160 companies, including multinational corporations, research institutions, and startups. With the goal of becoming a key driver of economic growth in the region and attracting local and foreign investment, SHTP is committed to promoting technology transfer, talent development, and collaboration between academia and industry to accelerate innovation and promote sustainable development.

## 베트남 내 하이테크 산업 육성을 위한 사이공 하이테크파크의 역할

사이공 하이테크파크(SHTP)는 2002년 베트남 국무총리의 허가 아래 설립되었습니다. SHTP는 호치민시에 위치하고 있으며 913헥타르의 면적을 차지하며 하이테크 산업의 발전을 촉진하고 이 지역의 혁신과 창의성을 촉진하는 것을 목표로 합니다. 이 공원에는 다국적 기업, 연구 기관 및 신생 기업을 포함하여 160개 이상의 기업이 있습니다. SHTP는 이 지역 경제 성장의 핵심 동력이 되고 지역 및 해외 투자를 유치한다는 목표로 혁신을 가속화하고 지속 가능한 개발을 촉진하기 위해 기술 이전, 인재 개발, 학계와 산업계 간의 협력을 촉진하는 데 전념하고 있습니다.

**SHTP**  
SAIGON HI-TECH PARK

**OUR VISION**

**Who we are?**

- Established in 2002
- One of the only three national hi-tech parks in Vietnam
- Initiated and invested by central and local governments budget
- Locates in the focal economic region of Southern Vietnam - accounted of 30% FDI capital of the country

**Vision**

- A technology and science city that will greatly enhance the economic, technological, and intellectual base of Ho Chi Minh City and the Southern Focal Economic Region of Vietnam
- A model for Vietnam technological innovation, intellectual capital development, and innovation economy

and Governments in the Region

## BIOGRAPHY

As the researcher and practitioner on science and technology policy, Dr. Yim has conducted many research projects, run science and technology parks and provided consulting services to the government. His special interest ranges from the subject of science and technology parks, regional innovation cluster and globalization of R&D. He has published more than fifty research reports and papers on technology management and technology policy both domestically and internationally. Currently, he is supporting the development of Science, Technology and Innovation of developing countries in Science and Technology Policy Institute. He also served as the president of International Society for Innovation Cluster. He has made new terminology "Innovation Cluster" first in the world and consulted Korean government for Daedeok Science Town, which later expanded to become Daedeok Innopolis of today. He has wide experience on both international and regional development of industry and technology and has organized many international conferences and established global expert network.

## Abstract

### Technoparks in Korea

(The case of business support program of GYEONGBUK TECHNOPARK)

Gyeongbuk TP promotes expansion of the Korean technopark model beyond representative innovation base institutions. Since its establishment in August 1998, Gyeongbuk Technopark has been leading the revitalization of the local economy by supporting the advancement of local industries and corporate growth as an innovation hub in Gyeongbuk. At the pivotal position of Gyeongsangbuk-do's industry-academia-research-research-government network, it leads the continuous innovation and development of Gyeongsangbuk-do, discovers and nurtures promising technology companies in the region, and serves as a support and guide for corporate growth. made progress. Gyeongbuk Technopark has a new high mission of "contributing to technological innovation and enhancement of corporate competitiveness through support for the growth of local companies", and as a successful partner for Gyeongbuk companies, we are going through the era of the 4th industrial revolution together with Official Development Assistance (ODA). We will focus on spreading the Korea Technopark model through the installation of the internal Gyeongbuk International Development Cooperation Center.

### 한국의 테크노파크

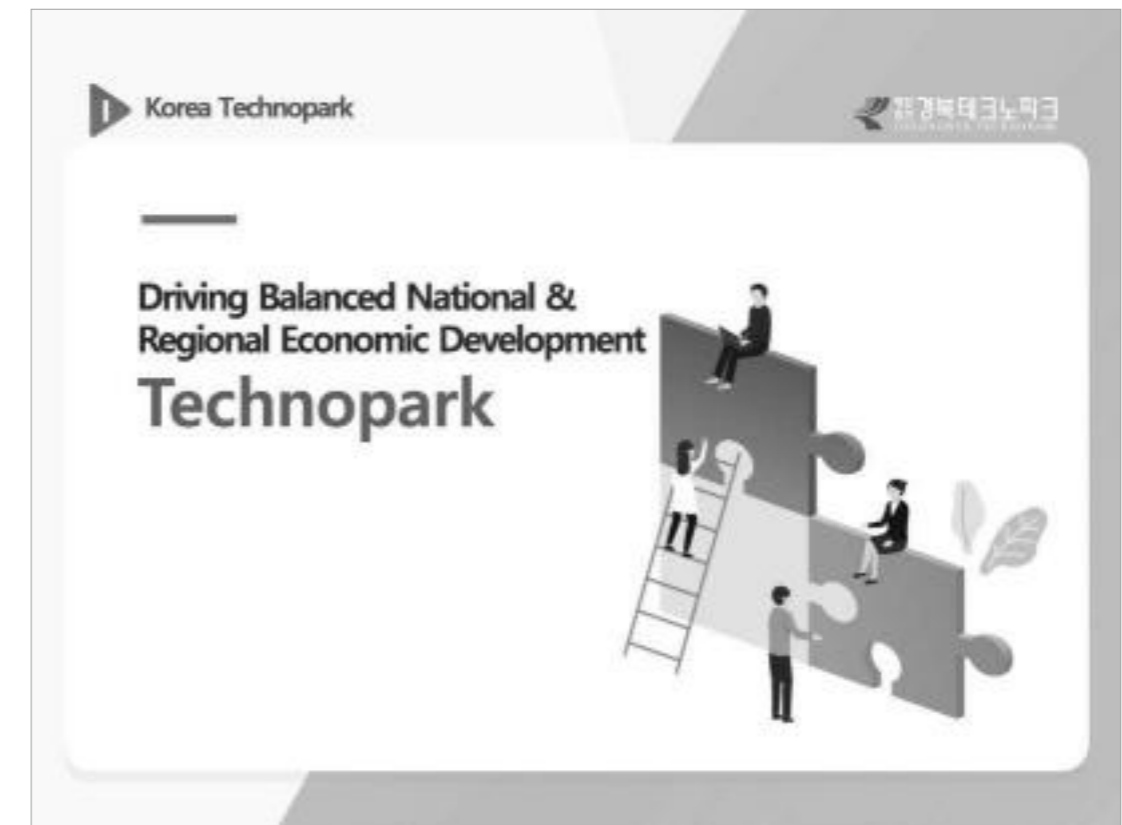

(경북테크노파크의 사업지원 프로그램)

경북TP, 대표 혁신거점기관을 넘어 한국형 테크노파크 모델 확산 추진

경북테크노파크는 1998년 8월 설립된 이래 경북의 혁신거점기관으로서 지역산업 고도화와 기업 성장을 지원하며 지역경제 활성화를 주도해왔습니다.

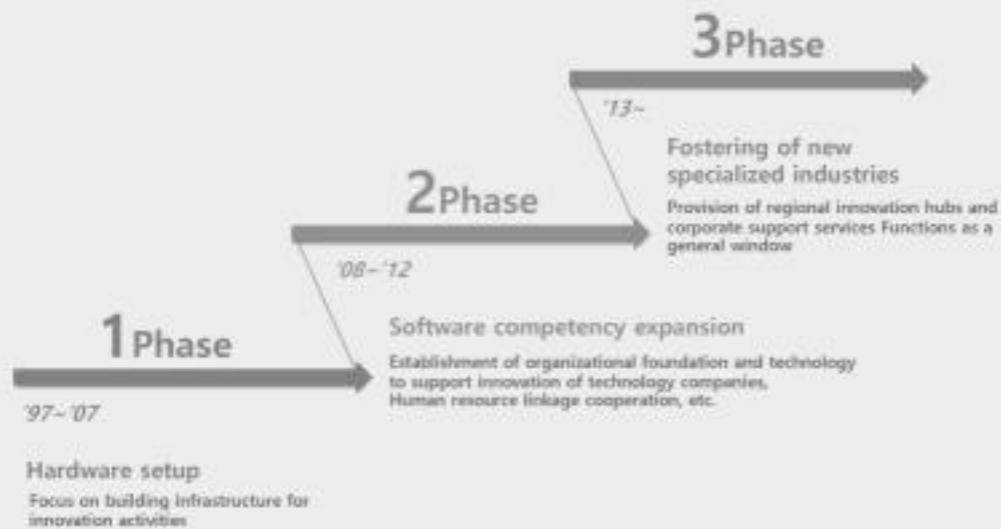

경상북도의 산·학·연·관 네트워크의 중추적인 위치에서 경북의 지속적인 혁신과 발전을 이끌고 동시에 지역의 유망 기술기업을 발굴하고 육성하며 기업 성장의 버팀목이자 안내자로서 끊임없는 열정과 노력으로 경북의 발전을 일구어왔습니다.

경북테크노파크는 "지역기업 성장지원을 통해 기술혁신과 기업경쟁력 향상에 기여한다"는 높은 사명을 새로이 품고 경북 기업의 성공파트너로 4차 산업혁명 시대를 함께 나감과 동시에 공적개발원조(ODA)분야에서 내부 경북국제개발협력센터 설치를 통해 한국테크노파크 모델의 확산을 집중하여 추진하고자 합니다.

## 02 ▶ Korea TP creation process

- Technopark in Korea started to be created in 1997 with a focus on space, and developed with a focus on fostering new specialized industries.

- » **March 2023 ~ Present** : Science Park Administration of Mongolia – Chief International Relations and Project Development Officer

#### Abstract

### Cooperation between Industry-University-Institutes in Mongolia and Global Cooperation Opportunities

Mongolia has been striving to enhance its science, technology, and innovation and create favorable ecosystem in line with its long-term development policy, Vision-2050. This policy places significant emphasis on the establishment of science parks and innovation tax-free zones, achieved through cooperation among industry, universities, and research institutes. Such collaboration is deemed critical to driving the country's growth and enhancing its competitiveness in the global market. During my presentation, I will discuss the challenges and opportunities associated with industry-university-institute collaboration in Mongolia. Although Mongolia faces challenges like a lack of a collaborative culture and a shortage of skilled human resources, its strategic location, rich natural resources, and increasing global recognition offer opportunities for global cooperation. The Science Park Administration of Mongolia is instrumental in fostering collaboration and regional development by supporting startups, linking innovative ideas with potential partners and investors, and facilitating knowledge sharing among all partners.

### 몽골의 산학연 협력과 국제 협력 기회

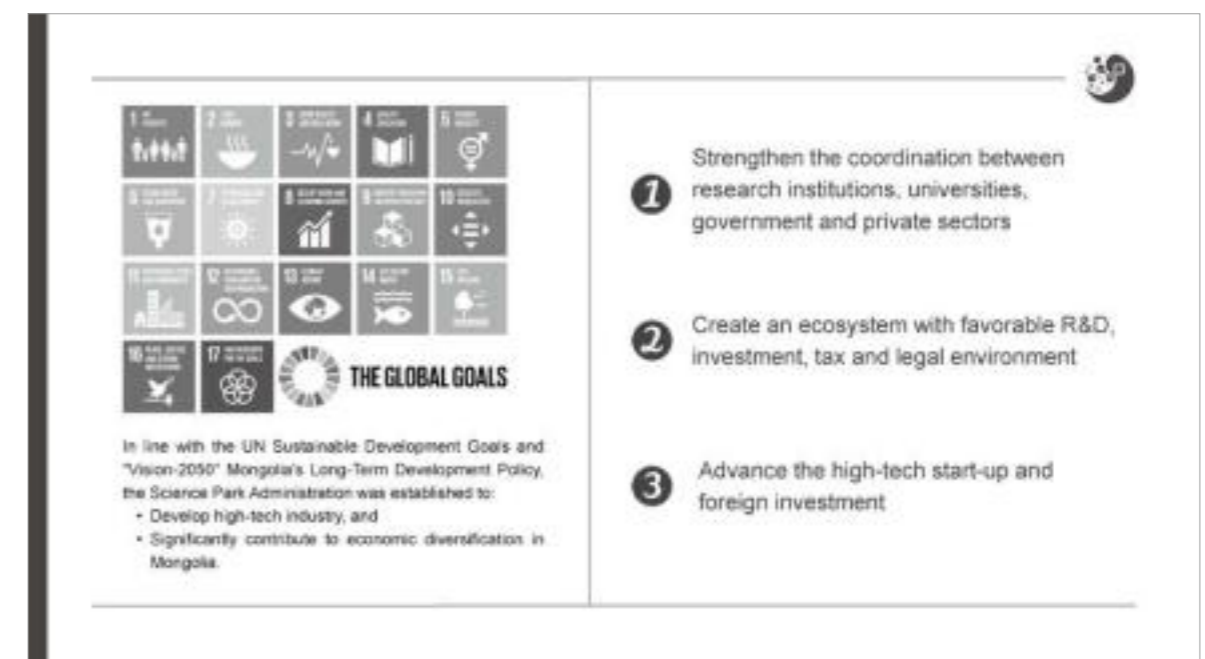

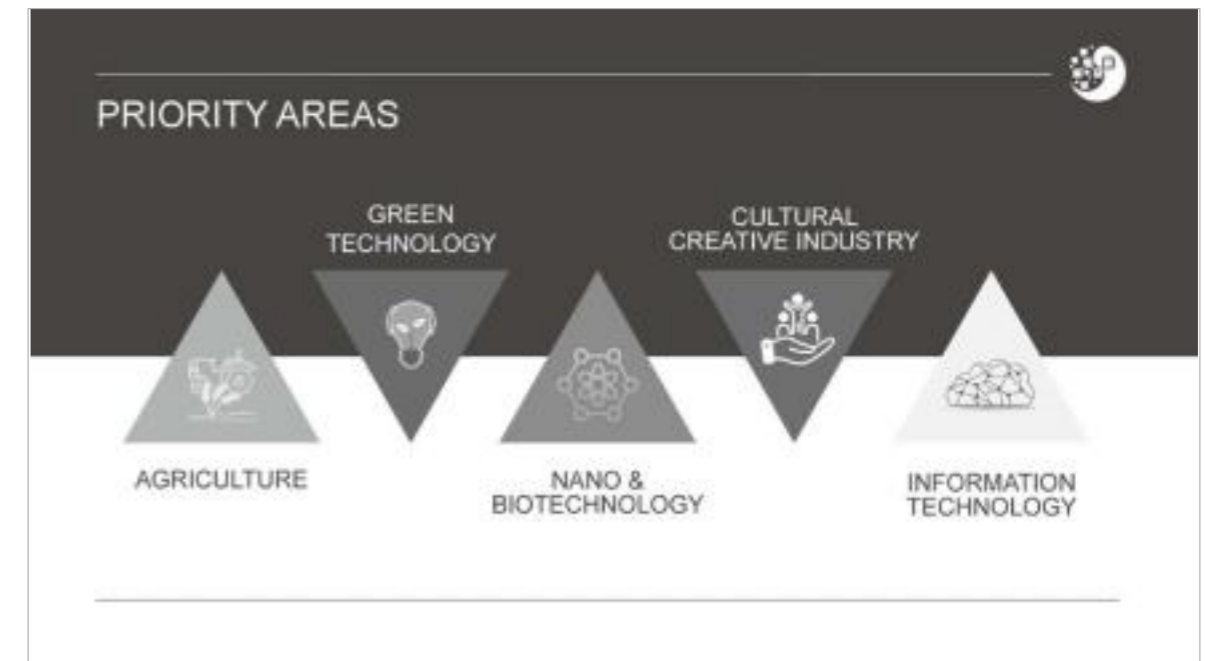

몽골은 장기 개발 정책인 Vision-2050에 따라 과학, 기술 및 혁신을 강화하고 유리한 생태계를 조성하기 위해 노력해 왔습니다.

이 정책은 산업, 대학 및 연구 기관 간의 협력을 통해 달성되는 사이언스 파크 및 혁신 면세 구역의 설립에 중점을 둡니다.

이러한 협력은 국가의 성장을 견인하고 글로벌 시장에서 경쟁력을 강화하는 데 매우 중요합니다. 발표하는 동안 몽골의 산학연 협력과 관련된 도전과 기회에 대해 논의할 것입니다.

몽골은 협력 문화 부족과 숙련된 인적 자원 부족과 같은 도전에 직면해 있지만 전략적 위치, 풍부한 천연 자원, 증가하는 세계적 인지도는 글로벌 협력의 기회를 제공합니다.

몽골 사이언스 파크 행정부는 신생 기업을 지원하고, 혁신적인 아이디어를 잠재적 파트너 및 투자자와 연결하고, 모든 파트너 간의 지식 공유를 촉진하여 협력 및 지역 개발을 촉진하는 데 중요한 역할을 합니다.

## DEVELOPMENT PLANNING

### ✓ Management Team

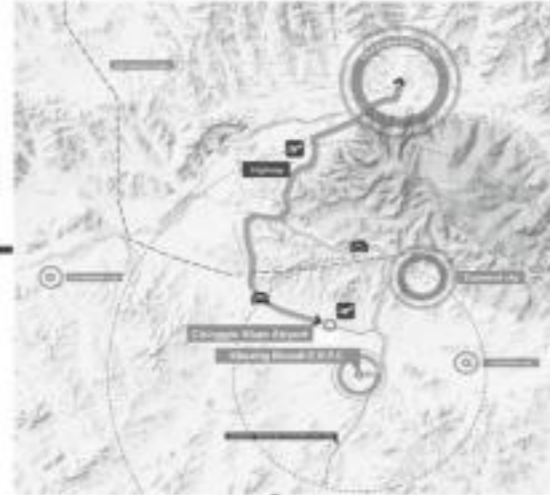

Management team of the administration incorporating different activities, from strategic planning to coordination of various stakeholders.

### ✓ Science and Innovation Complex

Being planned to cover around 4-5 hectares of land composed of various purpose buildings including national research institutes.

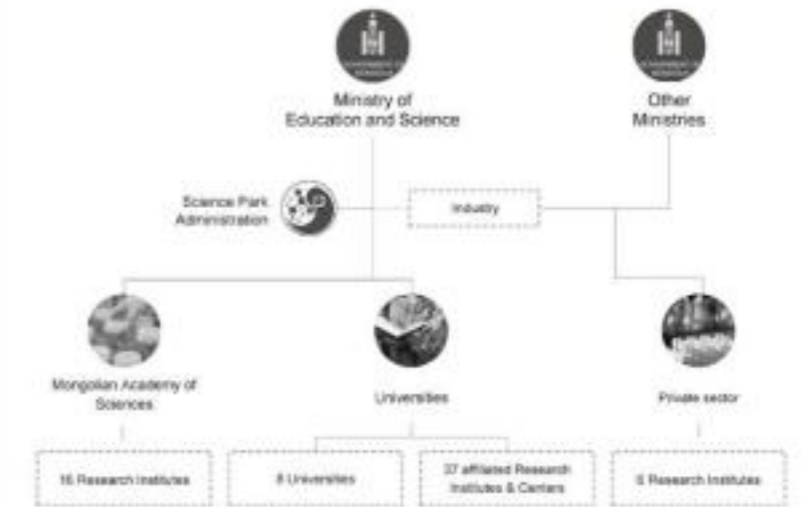

### ✓ Science Park Area of the Khushig Khundli E.R.P.C

An area of science parks in the "Education-Research-Industry Complex" will be composed of innovation center, laboratories, incubation center and R&D center with the total area of 65 hectares land.

Creating enabling environment for a partnership between state-science-production and business underpinned by a multi-source financing system of research, development and innovation in order to use knowledge as an economic asset.

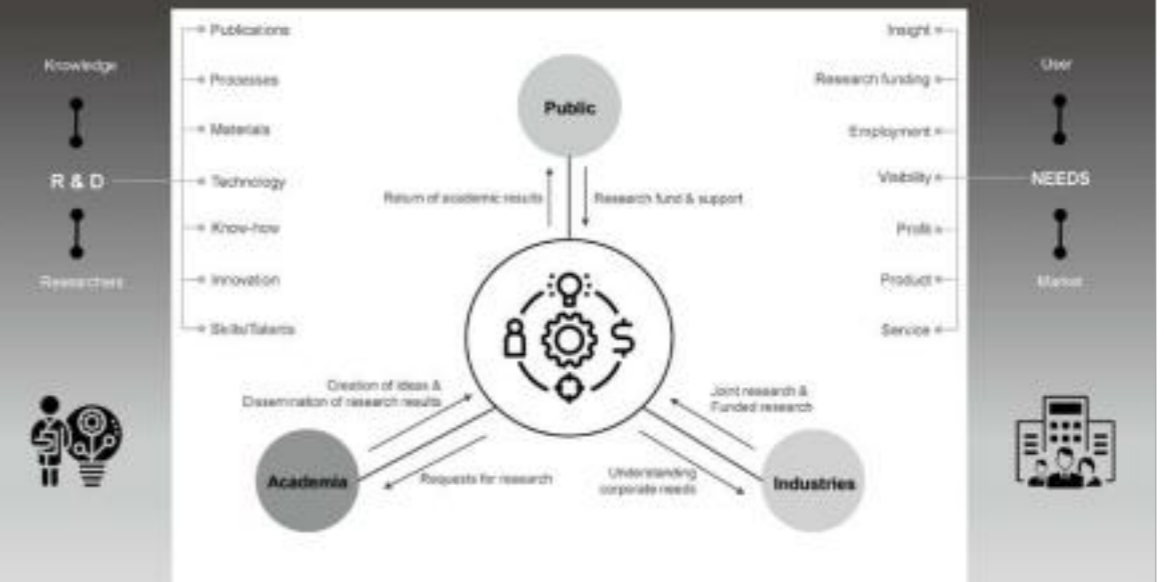

Vision 2050

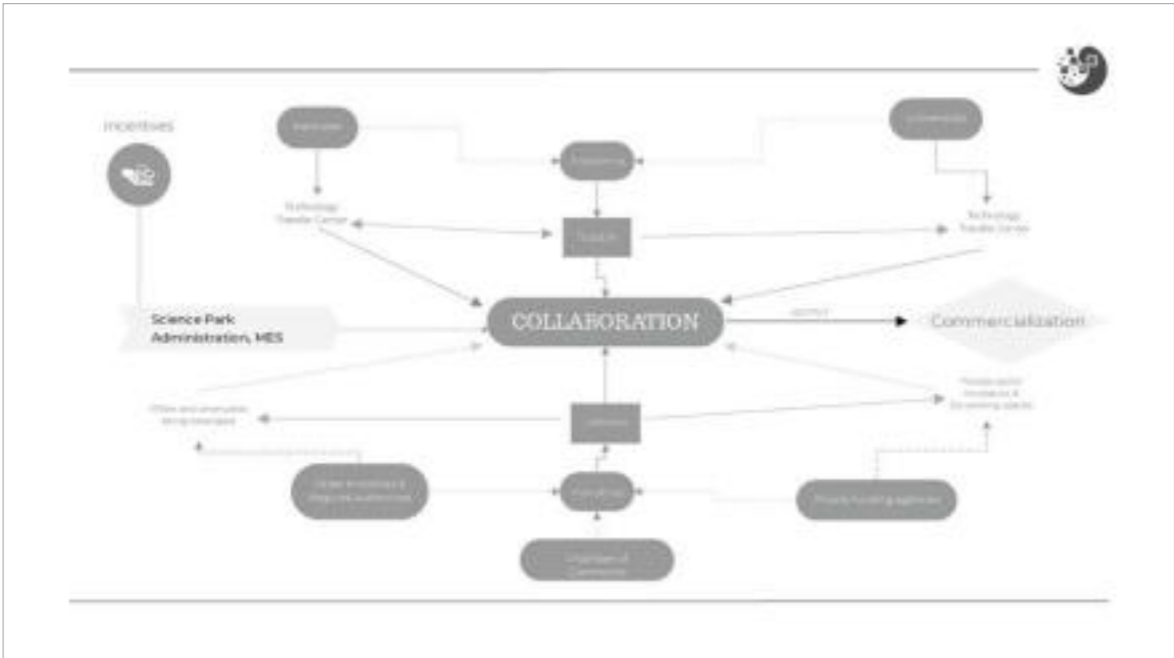

## Science & Innovation Complex

### Koredianto Usman

Director of Bandung Techno Park

창업촉진을 통해 실업을 해결을 위한 테크노파크의 역할

The Role of Technopark for the Micro and Small Scale Entreprises to Reduce Unemployability.

#### BIOGRAPHY

- » **2019 ~ 2022** : Deputy Dean of Resources of the Faculty of Engineering, Electrical Engineering, Telkom University
- » **March 2022 ~ Present** : Director of Bandung TechnoPark

#### Abstract

### The Role of Technopark for the Micro and Small Scale Entreprises to Reduce Unemployability.

In West Java Region, Indonesia, one of the main social problems is high unemployment rate. Unemployability is due to the high rate of high school and university graduates are much higher than the available working place provided by industry. To reduce unemployment, Indonesia government, through Ministry of Labour, has created training to improve the skill of high school and university in entrepreneurship, especially to create a micro and small business. There are a lot of possible problems that can be solved using innovation in micro and small business in various fields, such as agriculture support business, food and culinary business, environment-related and so on. It is in the creation of micro and small business that the Techno Park has the role boost and incubates this newborn business and start up. Several examples of businesses that help Bandung Technopark to grow are, for example: Payuoge (micro and small business finance management), Smash-ID (waste management), and so on. As the number of unemployable people is high in East Java Province, then more and large-scale entrepreneurship are necessary to be cultivated in the future.

### 창업촉진을 통해 실업을 해결을 위한 테크노파크의 역할

인도네시아 서부 자바 지역의 주요 사회 문제 중 하나는 높은 실업률입니다. 실업률은 높은 고등학교 졸업률과 대학 졸업자의 비율이 산업계에서 제공하는 일자리보다 훨씬 높기 때문입니다. 실업률을 줄이기 위해 인도네시아 정부는 노동부를 통해 특히 초소형 기업을 만들기 위해 고등학교와 대학의 기업가 정신을 향상시키는 훈련을 만들었습니다. 농업지원사업, 식품외식사업, 환경관련 등 다양한 분야에서 영세 소기업의 혁신을 통해 해결할 수 있는 문제가 많습니다. 테크노파크가 이 신생기업과 스타트업을 인큐베이팅하는 역할을 하고 있는 것은 중소기업 창출에 있습니다. Bandung Technopark의 성장을 돕는 비즈니스의 몇 가지 예는 예를 들어 Payuoge(소규모 비즈니스 재무 관리), Smash-ID(폐기물 관리) 등입니다. 동 자바지역의 실업자 수가 많기 때문에 향후 더 많은 대규모 기업가 정신을 배양해야 합니다.

### Abdulahad Kuchkarov

First Deputy Director of IT Park Uzbekistan

우즈베키스탄 - 중앙아시아 IT 허브  
Uzbekistan - IT Hub of Central Asia

### BIOGRAPHY

IT-Park was initiated by the order of the President of Uzbekistan with the aim to further develop IT and Startup ecosystem in the region. Mr.Kuchkarov has been a crucial member of ITpark team since the very start, 2019. First as a COO and now the First Deputy Director. Mr.Kuchkarov is a Member Board of Directors at Khan Academy Uzbek since 2019. Prior to IT Park, 2017-2019, Mr.Kuchkarov was Chief Executive Officer at Groundzero Co-working center, where he scaled up the co-working network from 1 to 5 in Tashkent. And between 2013 and 2017, He acted as Business Courses Coordinator at Uzbekistan-Japan Center.

### Abstract

### Uzbekistan - IT Hub of Central Asia

On November 20, 2019, the President of the Republic of Uzbekistan, Shavkat Mirziyoyev laid a symbolic capsule in a stone and began a new stage of construction of the technology park.

The global mission of IT Park is to become the biggest Central Asian IT Hub that supports the development of innovative projects, facilitates international IT integration, releases breakthrough IT companies, and trains a critical mass of young and talented IT specialists. IT Park unites and develops the IT ecosystem of Uzbekistan and operates in five areas, such as:

- » RESIDENCY that provides Tax Preferences to 1300+ IT and BPO companies. 0% Corporate tax and relocation program benefits.
- » INFRASTRUCTURE of brand-new IT cluster with area of 6.3 hectares. As well as 14 branches, 205 IT centers across Uzbekistan.
- » IT EDUCATION online and offline programs with more than a million graduates. Collaborations with universities and international organizations. Launch of the first digital university in Central Asia- IT Park University.
- » STARTUP ecosystem development programs and challenges. Incubation Centers, Corporate Accelerators, Venture Funds.-INTERNATIONAL ACTIVITIES that connect IT Park with 40+ International partners. Foreign representative offices in Germany and the USA, Collaboration with International/foreign organizations.

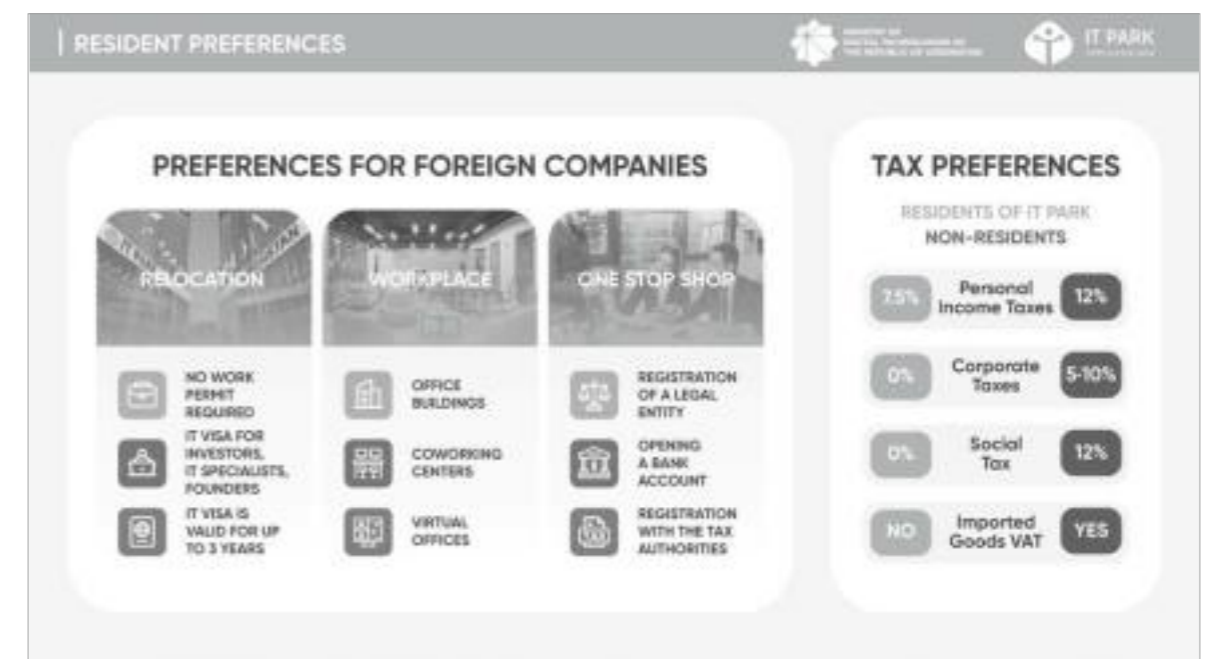

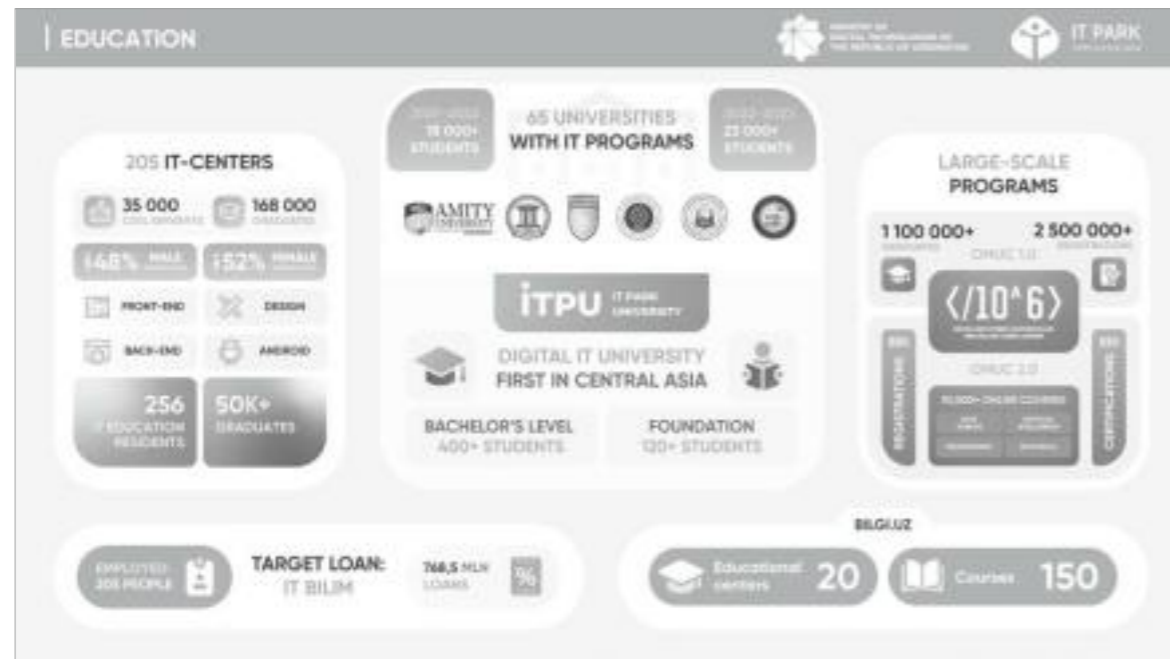

### 우즈베키스탄 - 중앙아시아 IT 허브

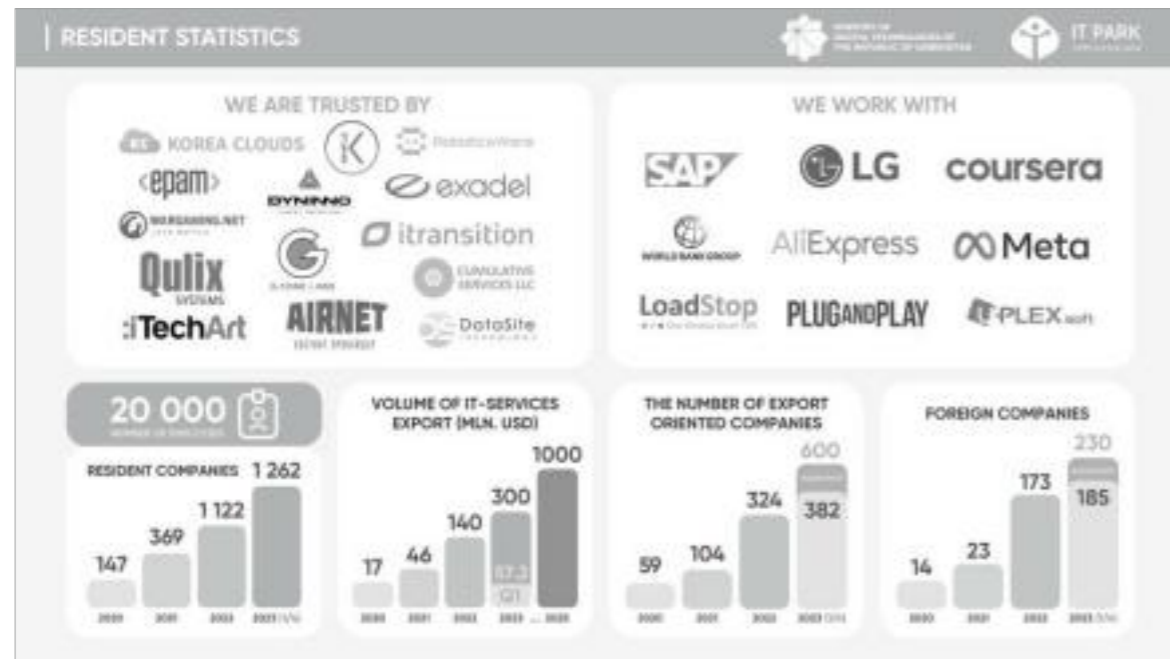

2019년 11월 20일, Shavkat Mirziyoyev 우즈베키스탄 공화국 대통령은 돌에 상징적인 캡슐을 놓고 기술 단지 건설의 새로운 단계를 시작했습니다.

IT Park의 글로벌 사명은 혁신적인 프로젝트 개발을 지원하고, 국제 IT 통합을 촉진하고, 획기적인 IT 회사를 출시하고, 젊고 재능 있는 IT 전문가를 양성하는 가장 큰 중앙아시아 IT 허브가 되는 것입니다. IT Park는 우즈베키스탄의 IT 생태계를 통합하고 개발하며 다음과 같은 5개 영역에서 운영됩니다.

- » 1300개 이상의 IT 및 BPO 회사에 세금 특혜를 제공하는 거주지. 0% 법인세 및 재배치 프로그램 혜택.
- » 6.3헥타르 면적의 새로운 IT 클러스터 인프라. 우즈베키스탄 전역에 14개의 지사, 205개의 IT 센터가 있습니다.
- » 100만 명 이상의 졸업생이 있는 IT EDUCATION 온라인 및 오프라인 프로그램. 대학 및 국제기구와의 협력. 중앙아시아 최초의 디지털 대학인 IT Park University 출범.
- » STARTUP 생태계 개발 프로그램 및 과제. 인큐베이션 센터, 기업 액셀러레이터, 벤처 펀드.
- » IT Park를 40개 이상의 국제 파트너와 연결하는 국제 활동. 독일 및 미국의 외국 대표 사무소, 국제/외국 기관과의 협력.
